ABOUT OUR COMPANY

Building on our strong foundations as a global technical resourcing partner, Addition Solutions developed a dedicated consulting services division, **Add Project**.

Add Project leverages a worldwide network of experienced industry associates, deploying purpose-built, client-specific work packages that enable faster, more effective delivery across the full technology transformation lifecycle.

For over a decade, we have worked alongside senior public sector leaders on the most complex, technology-enabled change and a hard truth persisted across government: Technology investment continues to grow — but accountability for realised value does not.

The issue is not vision or funding. It is the gap between delivery and impact — created by constrained capacity, fragmented accountability, and risk-averse delivery models that optimise activity, not outcomes.

Add Project was built to disrupt that model.

Addition

AddProject

BESPOKE BY DESIGN

Our Three-Tiered Engagement Framework is designed to support at any stage of the transformation journey and to evolve as needs change.

It uses a flexible, modular approach so our clients get the right expertise, at the right time, without committing to more than they need – ensuring progress without excess cost, delay, or risk.

Clients stay in control by choosing the level of engagement that fits their goals, pace, and constraints.

This enables decisive action, sustained momentum, and smart investment – driving impact without overreach.

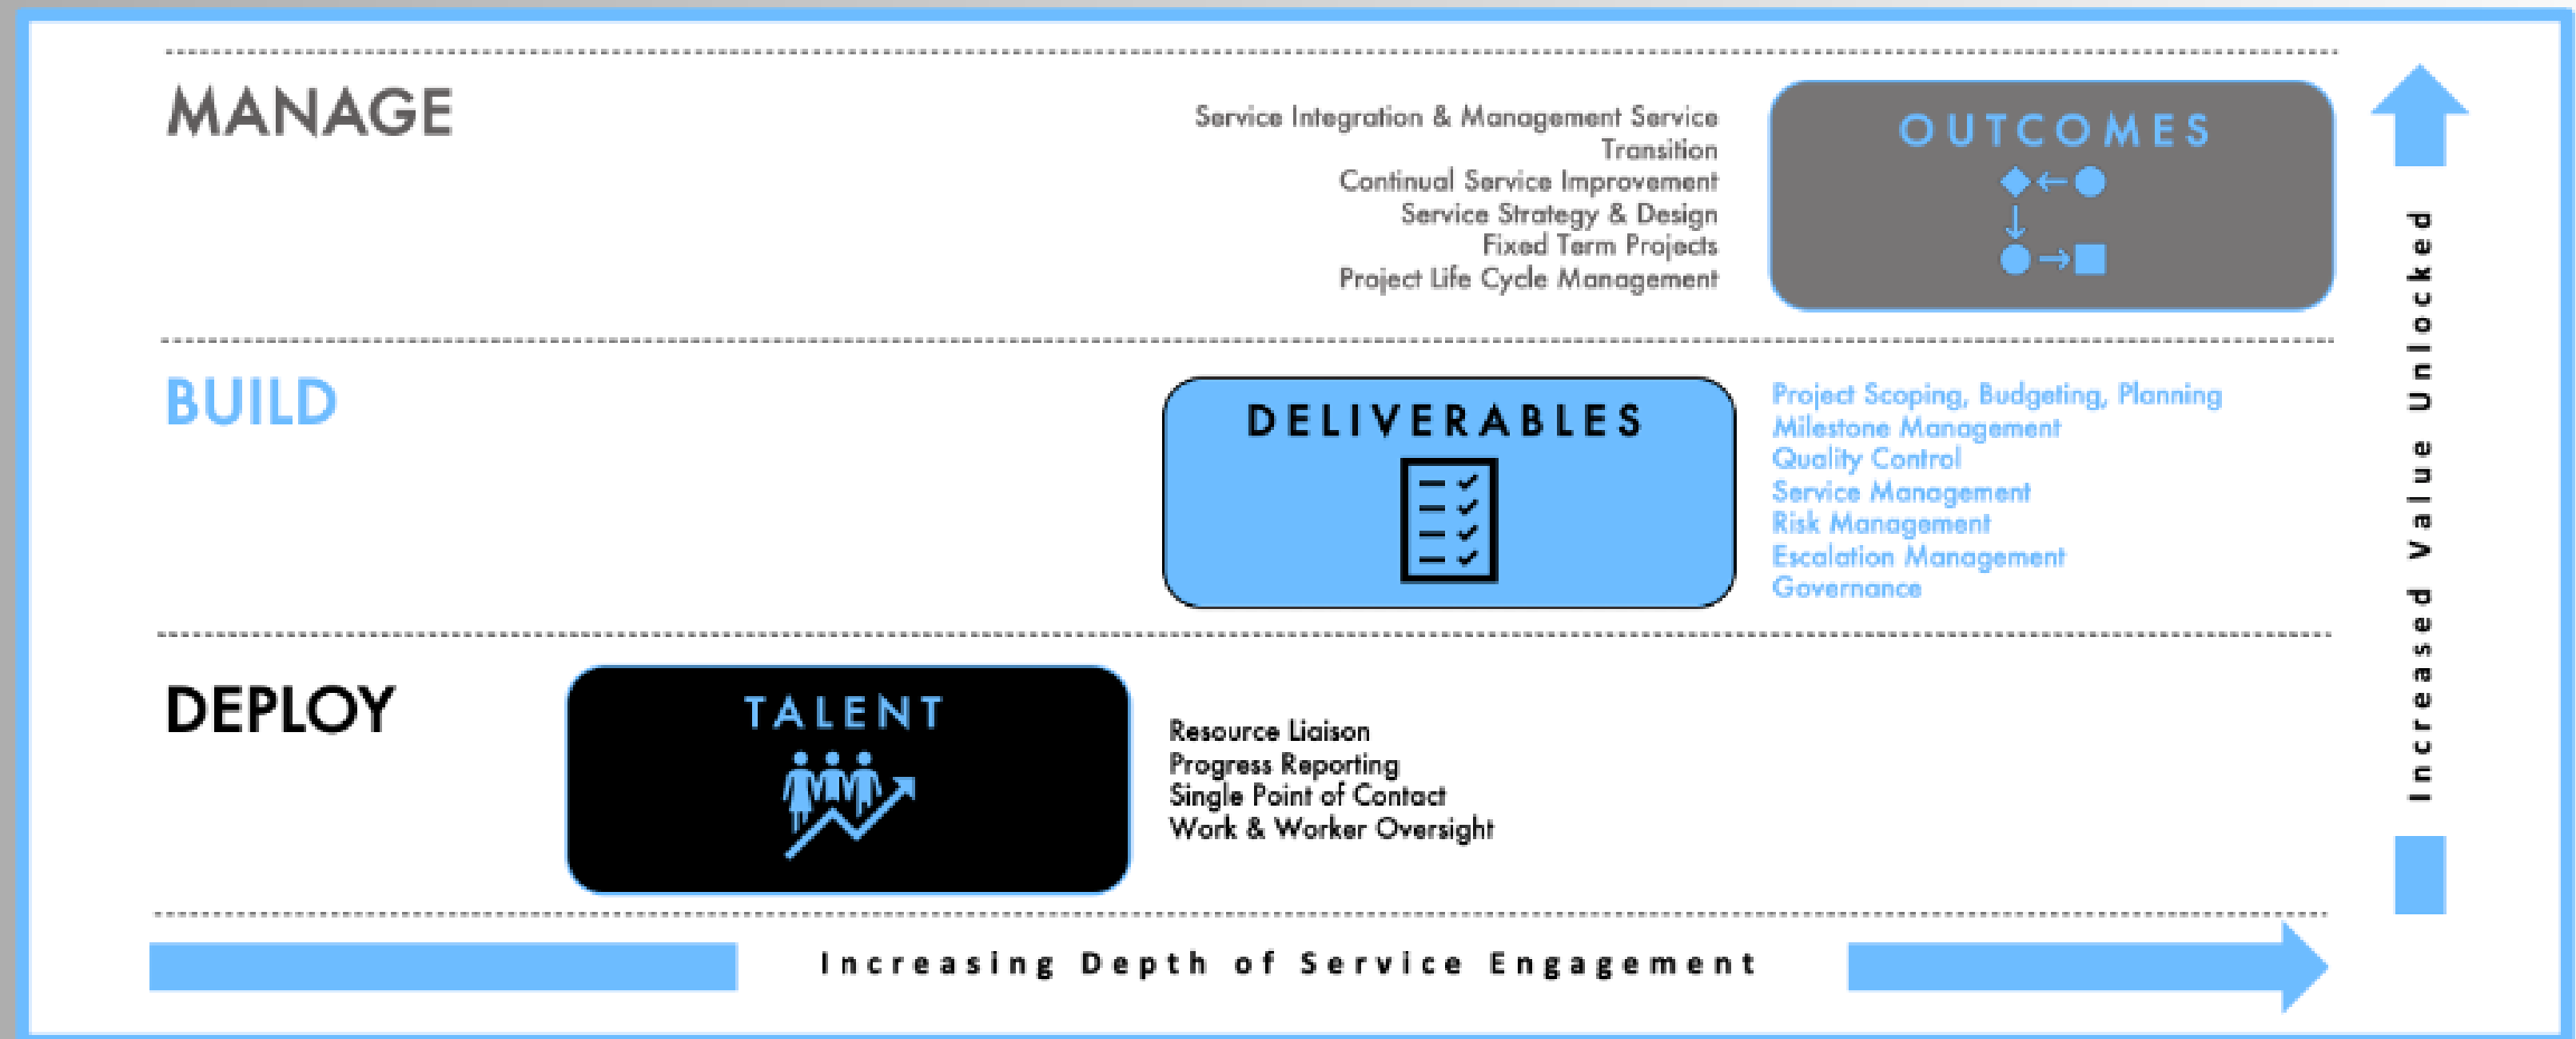

The framework is built to scale, making it easy to deepen or adjust support as priorities shift.

The result is a practical, adaptive partnership that focuses on measurable results and long-term impact, rather than short-term fixes.

WHAT TO EXPECT FROM OUR THREE-TIERED FRAMEWORK

HOW WE SUPPORT

Addition
AddProject

DEPLOY gives fast access to specialist independent consultants, aligned to your priorities, with oversight on every engagement.

Includes:

- Resource onboarding & liaison
- Work assignment tracking
- Progress reporting
- Single point of contact
- Issue escalation & resolution

BUILD adds full project and delivery management to Deploy, ensuring consultants deliver the right work on time and at the right quality.

Includes everything in Deploy, plus:

- Scope & backlog management
- Budgeting & scheduling
- Milestone & dependency tracking
- Quality assurance & performance metrics
- Risk, issue & change management

MANAGE offers full delivery accountability, driving outcomes and optimizing performance across the entire lifecycle.

Includes everything in Deploy & Build, plus:

- Outcome ownership & KPI/OKR alignment
- Service & supplier management
- Continuous service improvement
- Operational reporting & executive dashboards
- Fixed-price / outcome-based engagements
- Full governance & compliance

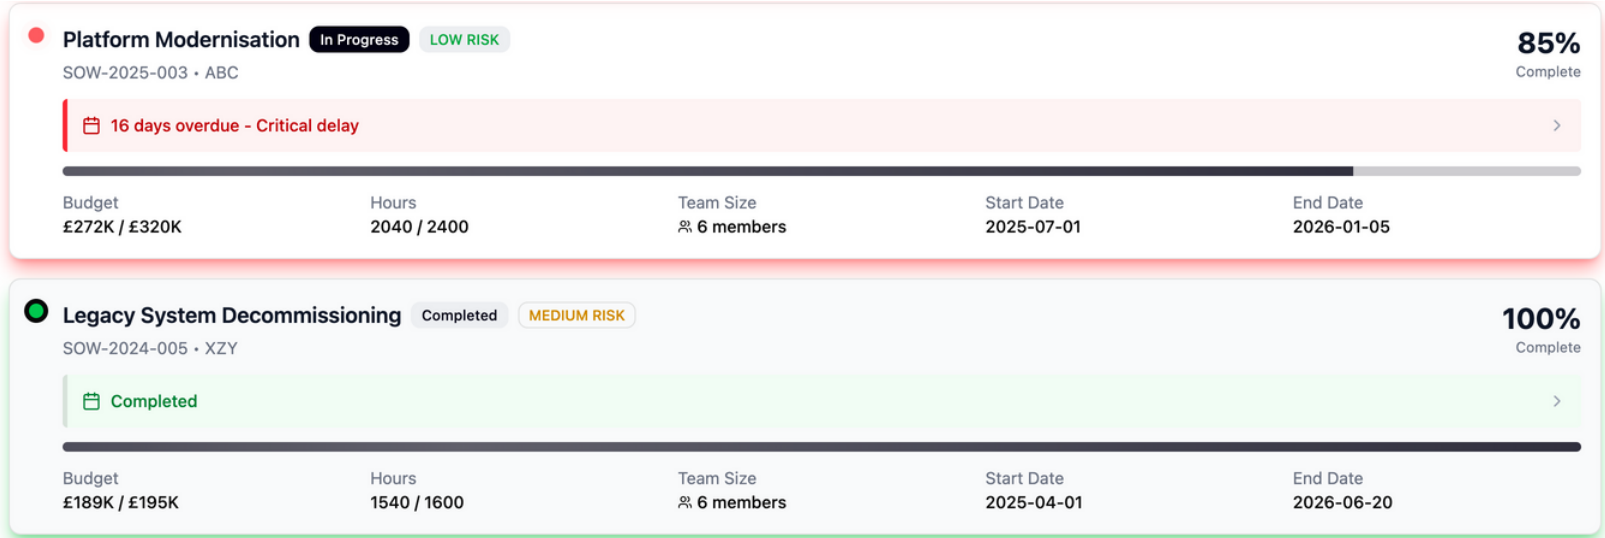

ENSURING MEASURABLE ADVANTAGE

Our AI-powered performance tracker gives you real-time clarity into consultant activity, deliverables, and value creation.

By continuously monitoring scope, milestones, and outcomes, it exposes risk early, enforces accountability, and eliminates costly surprises.

The result: fewer overruns, stronger performance, and confidence that every consultant, commitment, and investment is driving measurable, business impact.

QUALITY ASSURANCE AND PERFORMANCE TESTING

(AUTOMATION,
LOAD AND
READINESS)

Addition
AddProject

Addition via Add Project delivers practical training that builds confident users and capable support teams for cloud-based services.

We provide role-based learning for basic and super users, from day-to-day usage to advanced troubleshooting and optimisation, using clear materials, hands-on sessions and measurable outcomes to improve adoption and reduce support demand.

QUALITY ASSURANCE AND PERFORMANCE TESTING

(AUTOMATION, LOAD AND READINESS)

Addition
AddProject

Features

- Test automation development aligned to delivery pipelines
- Automation implementation, maintenance and reporting dashboards
- Assurance and test design: strategy, plans, and coverage mapping
- Performance testing: load, stress, volume, soak and scalability
- Capacity planning with bottleneck analysis and recommendations
- Infrastructure performance testing across networks, compute and storage
- Environment and test data management to enable repeatability
- Defect management, triage, root cause analysis and retest cycles
- Operational readiness testing: runbooks, monitoring, DR and support models
- Non-functional requirements validation and evidence pack production

QUALITY ASSURANCE AND PERFORMANCE TESTING

(AUTOMATION,
LOAD AND
READINESS)

Addition
AddProject

Benefits

- Higher release confidence through consistent, repeatable testing
- Faster delivery with automated regression and CI/CD integration
- Improved user experience via validated performance and resilience
- Reduced incident rates through early defect discovery
- Predictable scaling from evidence-led capacity planning
- Lower operational risk with proven readiness and runbooks
- Reduced costs by preventing late-stage rework
- Clear audit trail of testing, outcomes and sign-off evidence
- Faster diagnosis through structured defect triage and RCA
- Better service availability through performance and stability improvements
