HURDLE

Service Overview

Hurdle enables commissioning organisations to deploy population-scale diagnostic programmes without needing to build, operate or manage the underlying digital, operational or laboratory infrastructure.

The service provides a managed diagnostic pathway covering digital access, validated sample collection, accredited laboratory testing and results reporting, while allowing commissioners to retain control of clinical pathways and decision-making.

The service supports diagnostic testing and reporting. Ongoing clinical care, treatment decisions and onward referrals remain the responsibility of the commissioning organisation unless explicitly agreed as part of a separately commissioned clinical pathway.

HURDLE

Service Scope

The prices published in this schedule relate to a fully managed digital diagnostics service delivered through the Hurdle Software as a Service (SaaS) platform.

All diagnostic pathway prices include the following service components:

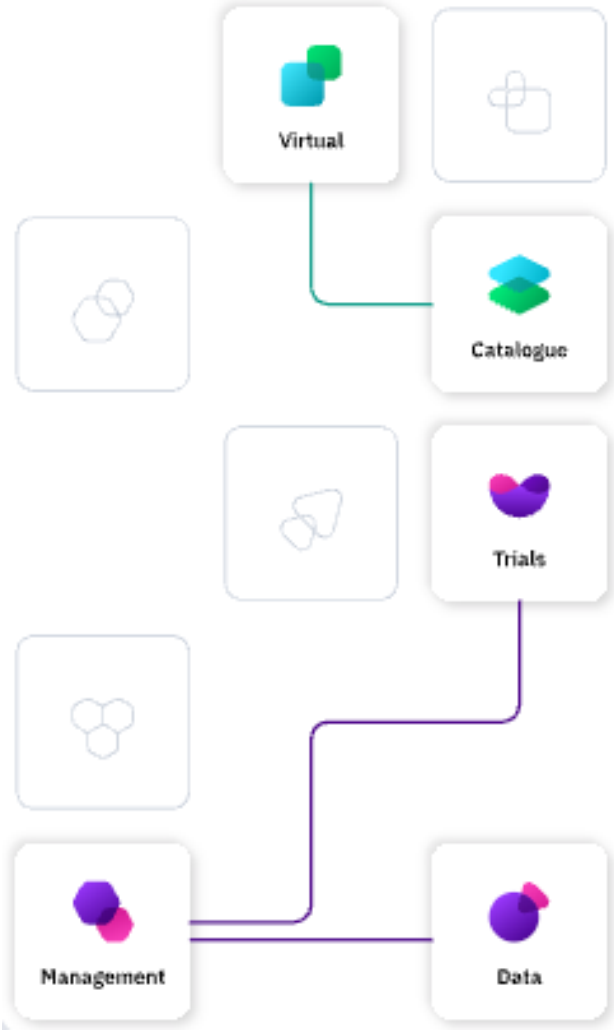

- Secure digital patient onboarding and identity verification
- Digital patient communications, notifications and instructions
- Dispatch of sample collection kits and return logistics
- Accredited laboratory testing and processing
- Digital ingestion, validation and secure storage of test results
- Patient access to results via a secure online portal
- Commissioner and clinician reporting dashboards

This pricing model provides buyers with a single, predictable, fixed price per pathway, covering the end-to-end diagnostic process from sample collection through to results reporting. All prices exclude VAT.

HURDLE

How Pricing is Applied

Pricing is applied on a per completed diagnostic pathway basis. Each pathway represents a defined end-to-end diagnostic service outcome, from patient onboarding through to results reporting.

Prices are inclusive of:

- Digital platform usage
- Logistics and fulfilment
- Laboratory processing
- Results management and reporting
- Operational and quality assurance

There are no hidden charges. Buyers select the pathways required and agree volumes and delivery models at call-off. All unit prices published are fixed and do not vary by volume, delivery model or scale.
