

G-Cloud Services

About Us

Lookthru is a UK-based business intelligence consultancy that helps clients to transform their raw data into actionable insights, optimising business processes and leverage automated workflows.

Why Us?

Clients across the globe are recognising the value that Lookthru delivers. By choosing Lookthru, they benefit from a level of service that consistently exceeds expectations. Through close collaboration with our team, we build trusted, long-term partnerships and ensure a positive, rewarding experience at every stage of the journey.

Our Values

We believe clarity builds confidence. We cut through complexity to provide clear insights, honest guidance and straightforward solutions that our customers can trust.

From communication to delivery, we are clear, honest and accountable, ensuring customers always understand the “why” behind our recommendations.

We work with our customers, not just for them. By collaborating closely and listening carefully, we build long-term relationships based on mutual trust and shared goals.

We deliver consistently high standards, meet commitments and provide solutions that perform as expected.

Our solutions are guided by insight, data and experience. We empower customers with intelligent analysis that supports informed, confident decisions.

Lookthru is driven by a clear set of values that guide how we work with our clients.

Our Mission

To provide clarity through insight—empowering our clients with transparent, intelligent solutions that drive confident decision-making and long-term success.

We achieve this by combining industry expertise with a collaborative, client-focused approach. Through careful analysis, open communication and intelligent use of data and technology, we deliver transparent solutions tailored to our client's needs.

By working in close partnership and maintaining a clear focus on outcomes, we enable confident decision-making and support sustainable, long-term success.

Lookthru helps public sector entities design and deliver modern data architectures using approved cloud data platform services and recognised reference patterns. Our service centres on enabling cloud-native data architectures, including Lakehouse models, medallion-based structures and managed data services across existing cloud environments.

We support organisations to establish data platforms that are accessible, well-governed and optimised for analytical and operational use through effective adoption of managed cloud data services. This service supports the implementation of modern data architecture and engineering practices.

What can it do for you?

Helps you to build modern data foundations that support analytics, insight and operational needs.

By introducing cloud native data architectures, you can improve how data is stored, processed and accessed across teams. New structures and services are implemented in a controlled manner within existing cloud environments and always have governance and security built in from the start.

The result being data platforms that are easier to use, better governed and ready to support growing demand for analytics and operations data services.

Service Features

Architecture Discovery & Design - We'll work with your teams to understand data requirements, existing platforms and target architecture needs.

Cloud Native Data Architecture Enablement - Design and implementation of Lakehouse, medallion and managed data service architectures.

Data Engineering Pipelines - Build of ingestion, transformation and processing pipelines to support analytical and operational workflows.

Managed Data Services Setup - Configuration of cloud data services to support scalable and reliable data platforms.

Data Governance & Quality - Controls to ensure data remains trusted, secure and well managed.

Integration with Existing Systems - Connecting modern data platforms to operations systems and external data sources.

Performance & Cost Optimisation - Monitoring and tuning to keep data services efficient and resilient.

Knowledge Transfer - Full documentation and support to help your teams manage and evolve data architecture practices.

Service Benefits

- Stronger foundations for analytics and operational data use
- Improved access to trusted and well-structured data
- Secure and well governed data environments
- Scalable data platforms that grow with demand
- Reduced complexity in data architectures
- Better visibility of data performance and cost
- Increased organisational maturity in data engineering practices

At LookThru, we are committed to delivering clarity, transparency and value in the work we do. We commit to working in close partnership with our clients, listening to their requirements and providing intelligent, insight-led solutions that they can trust.

Through open communication, consistent quality and a focus on long-term outcomes, we strive to exceed expectations and support confident decision-making at every stage of the journey.

“

I am proud of our unwavering commitment and dedication to service excellence. We believe in working in true partnership with our clients, focusing on outcomes that matter and supporting them through transformational change. Our goal is to deliver meaningful results that stand the test of time. “

Josh Stevenson
Principal Architect

Customer requirement

We work closely with stakeholders to understand objectives, constraints and priorities to ensure we deploy the correct skill set to meet the clients needs from the offset.

Confirm Availability

We ensure the appropriate team is available and onboarded, maintaining continuity throughout the project.

Coordinate & Streamline

Based on our experience, we align ways of working, governance and delivery from the outset, enabling effective collaboration through clear communication, escalation routes and regular reviews.

Define & Manage Scope

We clearly define and manage the scope of services, including deliverables, timelines, quality standards, and dependencies. This ensures aligned expectations and a controlled, transparent delivery process.

Review & Offboard

Before work commences, we review and finalise the service agreement. At offboarding, we ensure a smooth transition, to ensure knowledge transfer and clear documentation are handed over.

Lookthru holds the following accreditations, which collectively demonstrate our commitment to quality management, information security and ethical service delivery.

Lookthru delivers secure, reliable and data-led services to public sector and regulated organisations. Our delivery approach is underpinned by robust governance, clearly defined operational controls and a strong focus on information security, service quality and risk management.

Our accreditations demonstrate that Lookthru operates in alignment with recognised international standards and has been independently assessed against rigorous criteria. These certifications provide assurance that our people, processes and systems support consistent, compliant and well-governed service delivery across the full service lifecycle, from discovery and design through to implementation and live service support.

They also evidence our commitment to protecting client and user data, managing information and operational risk effectively and continuously improving the quality and resilience of our services. Lookthru maintains responsible and ethical business practices to ensure fair and compliant employment practices across the organisation, supporting sustainable and reliable delivery for public sector clients.
