

G-Cloud Services

## About Us

Lookthru is a UK-based business intelligence consultancy that helps clients to transform their raw data into actionable insights, optimising business processes and leverage automated workflows.

## Why Us?

Clients across the globe are recognising the value that Lookthru delivers. By choosing Lookthru, they benefit from a level of service that consistently exceeds expectations. Through close collaboration with our team, we build trusted, long-term partnerships and ensure a positive, rewarding experience at every stage of the journey.

## Our Values

We believe clarity builds confidence. We cut through complexity to provide clear insights, honest guidance and straightforward solutions that our customers can trust.

From communication to delivery, we are clear, honest and accountable, ensuring customers always understand the “why” behind our recommendations.

We work with our customers, not just for them. By collaborating closely and listening carefully, we build long-term relationships based on mutual trust and shared goals.

We deliver consistently high standards, meet commitments and provide solutions that perform as expected.

Our solutions are guided by insight, data and experience. We empower customers with intelligent analysis that supports informed, confident decisions.

Lookthru is driven by a clear set of values that guide how we work with our clients.

## Our Mission

To provide clarity through insight—empowering our clients with transparent, intelligent solutions that drive confident decision-making and long-term success.

We achieve this by combining industry expertise with a collaborative, client-focused approach. Through careful analysis, open communication and intelligent use of data and technology, we deliver transparent solutions tailored to our client's needs.

By working in close partnership and maintaining a clear focus on outcomes, we enable confident decision-making and support sustainable, long-term success.

Lookthru helps public sector entities to implement and operate modern cloud-based data platforms, delivering data ingestion, transformation, analytics and visualisation using approved cloud services. Our service focuses on designing data architectures and configuring data engineering pipelines and analytical capabilities within existing cloud environments.

We enable the creation of reliable, trusted and well-governed datasets using platforms such as Databricks, Microsoft Fabric & Microsoft Azure to support reporting, insights and informed decision-making. This service supports the adoption and optimisation of cloud data platforms.

## What can it do for you?

Helps to turn your data into reliable insights that supports better decision making.

By building modern cloud-based data platforms, you can bring your data together, improve its quality and make reporting and analytics more accessible across teams. New data pipelines and analytical services are introduced in a structured way, with governance in place so that full trust in the data is maintained.

This gives you clear visibility of performance and outcomes, more confidence in decision making and data platforms that are secure and ready to scale as needs evolve.

## **Service Features**

**Data Discovery & Architecture Design** - We'll work with your teams to understand data sources, requirements and existing data landscapes

**Cloud Data Platform Setup** - Configuration of cloud data services using platforms such as Microsoft Fabric, Azure and Databricks

**Data Engineering & Pipelines** - Design and build of data ingestion, transformation and processing pipelines

**Analytics & Visualisation** - Development of reporting, dashboards and analytical tools to support insight generation

**Data Governance & Quality** - Processes and controls to ensure data is trusted, well managed and compliant

**Integration with Existing Systems** - Connecting data platforms to operational systems and external data sources

**Performance & Cost Optimisation** - Monitoring and tuning to keep data services efficient and reliable

**Knowledge Transfer** - Full documentation and support to help teams manage and evolve data platforms

## **Service Benefits**

- Improved access to trusted data and insights
- Better reporting and decision making
- Reduced manual data handling and duplication
- Secure and well governed data platforms
- Analytics capabilities that scale with needs
- Lower long term data platform complexity
- Clear visibility of data performance and cost

At LookThru, we are committed to delivering clarity, transparency and value in the work we do. We commit to working in close partnership with our clients, listening to their requirements and providing intelligent, insight-led solutions that they can trust.

Through open communication, consistent quality and a focus on long-term outcomes, we strive to exceed expectations and support confident decision-making at every stage of the journey.

“

I am proud of our unwavering commitment and dedication to service excellence. We believe in working in true partnership with our clients, focusing on outcomes that matter and supporting them through transformational change. Our goal is to deliver meaningful results that stand the test of time. “

---

**Josh Stevenson**  
Principal Architect

## Customer requirement

We work closely with stakeholders to understand objectives, constraints and priorities to ensure we deploy the correct skill set to meet the clients needs from the offset.

## Confirm Availability

We ensure the appropriate team is available and onboarded, maintaining continuity throughout the project.

## Coordinate & Streamline

Based on our experience, we align ways of working, governance and delivery from the outset, enabling effective collaboration through clear communication, escalation routes and regular reviews.

## Define & Manage Scope

We clearly define and manage the scope of services, including deliverables, timelines, quality standards, and dependencies. This ensures aligned expectations and a controlled, transparent delivery process.

## Review & Offboard

Before work commences, we review and finalise the service agreement. At offboarding, we ensure a smooth transition, to ensure knowledge transfer and clear documentation are handed over.

Lookthru holds the following accreditations, which collectively demonstrate our commitment to quality management, information security and ethical service delivery.

Lookthru delivers secure, reliable and data-led services to public sector and regulated organisations. Our delivery approach is underpinned by robust governance, clearly defined operational controls and a strong focus on information security, service quality and risk management.

Our accreditations demonstrate that Lookthru operates in alignment with recognised international standards and has been independently assessed against rigorous criteria. These certifications provide assurance that our people, processes and systems support consistent, compliant and well-governed service delivery across the full service lifecycle, from discovery and design through to implementation and live service support.

They also evidence our commitment to protecting client and user data, managing information and operational risk effectively and continuously improving the quality and resilience of our services. Lookthru maintains responsible and ethical business practices to ensure fair and compliant employment practices across the organisation, supporting sustainable and reliable delivery for public sector clients.
