

Boldyn Networks Pricing – IoT Accelerator

A rapid proof of concept service to design and deliver a pilot IoT solution for a defined operational use case. The service covers device integration data ingestion processing analytics and visualisation to demonstrate real-world value. It is time-boxed and outcome-focused allowing organisations to test feasibility performance and operational impact before wider rollout. Typical outputs include a working pilot dashboards insight reports and recommendations for scaling and integration into enterprise platforms.

Role	Description	Rate (per day ex VAT)
Data Engineer	Design and build data pipelines ingestion processes transformations and analytics solutions supporting data and IoT use cases	£895
Senior Data Engineer	Lead delivery of complex data and IoT accelerators provide technical leadership and mentor engineers	£995
Data Architect	Design secure scalable data platforms define target architectures governance and integration patterns	£1,195
Lead / Principal Data Architect	Technical design authority architecture assurance and oversight across complex programmes	£1,195
Data Scientist	Advanced analytics predictive modelling machine learning and insight generation	£995
Technical Consultant	Hands-on technical support across data analytics IoT and platform configuration activities	£895
Project Manager	Coordinates the management of project to ensure the solution is delivered smoothly, on time, and in line with the agreed strategy	£795
