Osavul, Inc.

G-Cloud 15

27 January, 2026

1. Scope and applicability

This pricing document is provided for buyers procuring Osavul's SaaS platform. Prices are in GBP and are exclusive of VAT (VAT will be added where applicable). This document covers subscription pricing for the Osavul cloud software service, based on (a) monthly usage tiers and (b) package level (features and seats).

2. Pricing model overview

Osavul pricing is determined by selecting:

- A usage Tier (1–5), based on the monthly analytical data quota (data points/units).
- A Package (Basic, Professional, or Advanced), based on included features and number of user accounts.

Usage is the amount of data that can be analysed through the platform on a monthly basis. Each month, the buyer receives a quota of analytical units (data points) that can be used to retrieve/process data and build analytical reports. AI units are required to use AI-powered features (for example, topic modelling and aspect-based sentiment). Packages without AI units do not include AI-powered features.
Depending on the package, the buyer may have access to advanced features (topic modeling, aspect-based sentiment analysis, alerting, and customer data pipelines), as well as different numbers of available users/accounts and training & consulting hours.

3. Package inclusions (features and seats)

Choose the package that matches the required feature set and number of user accounts.
