Overview

Vivanti observes three broad approaches to delivering AI in the market along with three broad approaches to delivering professional services. This creates a “mold” for nine high-level go-to-markets upon which to tag prospective deliverables, which constitute the core of a broader services offering.

AI Core Services - Enterprise Chat

Vivanti helps public sector organisations harness the power of Enterprise Chat as an advisory and delivery partner. Our professional services include **AI Literacy Training** to empower your teams and **Strategic Enterprise AI Advisory** to link AI adoption to tangible key performance indicators (KPIs) and optimisation of target operating models (TOMs). Vivanti is a technology-agnostic partner that can provide advisory services that enable your public sector team to maximise the utility of AI enterprise chat services such as OpenAI's ChatGPT, Anthropic's Claude, Google's Gemini and Snowflake Intelligence.

AI Core Services - Business Opportunity Aligned

Vivanti provides expert advisory and delivery services through senior AI Engineering consultants with Product Owner experience to help customers build and deploy custom AI solutions that improve lead and/or lag metrics. Leveraging our **Accelerate AI Framework**, Vivanti works with you to design a bespoke AI solution that is aligned to key metrics, taking it **from conceptual solution design, to Proof of Concept (PoC), to Minimum Viable Product (MVP) to full-fledged Production.**

Vivanti will focus on addressing your biggest challenges through the development of **Custom AI Products** (i.e. custom APIs, chats or MCP servers) that leverage agentic workflows, **Content Curation** for structured documentation or insights from unstructured data, **Fine Tuning** language models and embedded AI services within SaaS products.

This service extends to implementing **AI Enabled Migrations** from legacy data systems to modern data stacks.

AI Core Services - AI Platform

Vivanti offers strategic advisory and deep technical delivery services to help your organisation build a secure, scalable, and governed enterprise AI platform. We can guide your team from the initial **AI & ML Governance Framework & Roadmap** design through to the full implementation of a robust **MLOps Platform** and an **LLMOps Platform**, complete with a **Model Hub**, **RAG** capabilities and **LLM Router Gateway**. As a technology-agnostic partner that emphasises excellence in design and reusability, we can deliver future-proof AI Platforms that are multi-cloud and multi-model for your organisation.

AI Experimental Services - Enterprise Chat

Vivanti helps public sector organisations harness the power of Enterprise Chat as an advisory and delivery partner. Its AI Experimental Services for Enterprise Chat include an **Impact Assessment of your existing Enterprise AI on your current workforce**. This in-depth analytical analysis of your organisation's current AI usage aims to uncover unseen patterns that highlight risk and opportunity, laying the foundation for experimental action that can prove ambitious, organisationally aligned success metrics.

AI Experimental Services - Business Opportunity Aligned

Vivanti provides expert advisory and delivery services through senior AI Engineering consultants with Product Owner experience to help customers experiment with advanced AI concepts such as translating AI into an **Agentic AI Workforce** as well as leveraging **Open Source / Open**

Weight Models and **Knowledge Distillation** to achieve model sovereignty and to approach performance optimisation.

AI Experimental Services - AI Platform

Vivanti offers strategic advisory and deep technical delivery services to help your organisation design and prototype cutting-edge AI Platform capabilities. Our expert consultants provide the advisory and deep technical expertise to architect advanced concepts like an **Agentic AI Mesh** or develop **GPU Demand Optimisation** strategies.

AI Managed Services (MS) - Enterprise Chat

To ensure the continued success of your AI initiatives, Vivanti offers expert Managed Services for Enterprise Chat. Our team of consultant engineers can provide a dedicated **helpdesk for expert-level support** and **continuous utilisation monitoring**. This professional service ensures your implemented solutions remain effective and that your teams are fully supported.

AI Managed Services (MS) - Business Opportunity Aligned

Vivanti's Managed Services provide ongoing **AI Site Reliability Engineering (SRE)** expertise for your **bespoke AI applications** whether that be **Content Curation** applications, **MCP** servers or **Agent AI workflows** or experimental **Agentic AI Workforces**. As your professional services partner, we provide expert oversight to ensure the resilience and performance of solutions built on platforms like AWS, Azure, Google Cloud, Snowflake, or Databricks. This service gives you access to our deep technical knowledge to maintain your critical AI systems.

AI Managed Services (MS) - AI Platform

Vivanti's Managed Services provide ongoing **AI Site Reliability Engineering (SRE)** expertise for your custom **AI Platform**. As your professional services partner, we provide expert oversight to ensure the resilience and performance of solutions built on platforms like AWS, Azure, Google Cloud, Snowflake, or Databricks. This service gives you access to our deep technical knowledge to maintain your critical AI systems.
