

Data Strategy and Governance Tooling & Purview Implementation

Common Client Requirements...

Articulation and execution of their data strategy, to deliver data ownership, policy and general compliance, paving the way for future modernisation projects such as cloud modernisation, AI readiness and decommissioning of legacy systems, driving cost reductions.

Core Challenges

Organisations are expanding data governance programmes/ are introducing tooling for cataloguing data quality, MDM and RDM yet lack expertise and skillsets to implement most effective tools for their needs.

Documentation/ownership models/products are stored across multiple platforms with no centralisation in place.

Required skillsets to implement key controls/unlock full functionality of critical tools (e.g. Purview) are not in place.

Known Impacts

Project focus is targeted on data discovery as opposed to analysis, with no golden data sources in place. Role ownership for tooling isn't fully understood and implemented tools often don't deliver all business needs.

Data estates are unknown, preventing organisations from have a clear and controlled view of personal and critical data.

Integrations and utilisation of modern industry standard tooling is impacted/diminished, limiting effectiveness of key tools (Purview).

Our Solutions

MS purview and tooling implementation readiness assessment

Comprehensive tooling review to identify where existing tools are not fully utilised and delivering operational value

Documentation of current and future state requirements to ensure the adoption of additional tools fully match business needs

How we've helped our clients resolve these challenges

Multinational General Insurance Firm

We helped our client build out data governance and quality processes enabling us to successfully deploy Purview, underpinned by providing new data management processes across key functions.

Major Commercial and Retail Bank

Our client had Purview but were unsure of its capabilities and lacked knowledge and skillset to implement. Over eight-weeks we completed a POC to showcase functionality and built a roadmap for wider adoption.
