

Cloud Data Platform Migration Design and Mobilisation

Common Client Requirements...

Move from legacy (usually on-premises) data systems onto modern cloud platforms to realise cost savings and leverage future capabilities such as AI

Core Challenges

Successfully defining aligned migration strategies and desired outcomes so a clear future state milestone pathway is in place.

Managing risks through defining roles and responsibilities, underpinned by clear communication and reporting to drive informed decision making.

Avoiding fragmented or competing migration strategies and activities or not securing sufficient resources and capacity for successful migration.

Known Impacts

Securing funding can be a challenge when a clear delivery pathway is not present, compounded by a difficulty in measuring progress.

Project delays caused scope creep and a lack of capacity to resolve unexpected challenges arise where roles and responsibilities are not clear or decisions made based on limited data.

Unclear or misaligned delivery timelines impact overall migration progress, which minimise initial momentum and can result in a lack of buy-in over time.

Our Solutions

We can help to define both the business case for migration, alongside articulating the ROI that will be achieved for utilising an effective migration strategy.

Implementing and enforcing project governance design principles to ensure a successful migration outcome.

Providing and augmenting project leadership, to ensure full mobilisation and buy-in for the wider migration strategy.

How we've helped our clients resolve these challenges

Multinational General Insurance Firm

We enabled our clients to decommission an on-premise customer data provider, and migrate to the Microsoft Azure platform through data standardisation, cleansing and integration activities.

Major Commercial and Retail Bank

We enabled our client to upgrade their on-premise commercial platform to a cloud-based solution in line with their strategic technology campaign, enabling the removal of the on-premise platform.
