A collective of sector specialists, delivery experts and transformation leaders

Tile Hill supports public sector organisations to deliver sustainable transformation through high-quality leadership and specialist delivery capability. We bring together deep sector insight, extensive networks, and delivery-focused consultants to enable digital, data and cloud change at pace.

Our specialisms

- Digital, Data & Technology (DDaT) transformation and operating model design
- Cloud adoption, migration, modernisation and cloud support services (Lot 3 aligned)
- Architecture capability – enterprise, solution, technical, platform and data architecture
- Programme & Project Management (PPM) – delivery leadership, governance and assurance
- Managed Bench / scalable delivery teams across SFIA-aligned roles and technologies
- Transformation leadership – strategy, business cases, governance and stakeholder engagement
- Values-led and inclusive approaches that support sustainable cultural change and capability uplift

Consultancy

We work at the intersection of business strategy, delivery and technology. Tile Hill consultants provide expert advice and hands-on delivery support to drive change, improve services and reduce risk. Our approach is outcomes focused and tailored to each organisation's context, governance and delivery maturity.

Resourcing

We provide rapid access to specialist delivery capability – from individual SMEs through to full multi-disciplinary teams. We deploy the right expertise at pace, aligned to your priorities, governance and delivery roadmap.

Training & Capability Building

We embed knowledge transfer throughout delivery. Through coaching, mentoring and structured training we support internal teams to build capability, adopt best practice and sustain change beyond the end of an engagement.

Inclusion & Culture

Tile Hill supports values-led transformation. We help organisations build inclusive ways of working, strengthen culture and enable high-performing teams. Our networks and approach support improved diversity of thought and better outcomes for users.

Tile Hill takes a values-led approach to delivery. For us, this is not a slogan, it is a practical way of working that ensures public sector programmes are delivered ethically, transparently and sustainably.

In practice, our values-led approach means:

- **User needs first:** we design around the needs of users and service outcomes, not internal structures.
- **Integrity and transparency:** we provide clear reporting, honest advice and evidence-based recommendations (including when the right decision is to stop, pause or change direction).
- **Inclusive ways of working:** we encourage diverse perspectives, accessible design and meaningful stakeholder engagement.
- **Responsible use of public money:** we focus on whole-life value, manage risk actively, and ensure value for money is demonstrated throughout delivery.
- **Capability building (not dependency):** we embed knowledge transfer at every level to strengthen client capability and sustain improvements beyond the engagement.

Tile Hill – Architecture Services (Lot 3: Cloud Support)

Service Overview

Tile Hill's architecture consultants lead and deliver digital, technology and cloud transformation. We provide scalable architecture teams to support cloud adoption, migration and modernisation, alongside independent cloud consultants in advisory and strategic roles. Our specialists bring deep sector knowledge, enabling improved decision-making, reduced cost, and more resilient and secure services.

Service features

- Enterprise Architecture, data mapping, design consultancy and support
- Experience of re-platforming legacy systems
- Infrastructure, platform and operational architecture design
- Best practice cloud infrastructure services
- Quality assurance and testing processes
- Long term strategy planning, business case support and generation
- Multi / omni-channel designing and solutioning
- Considered approach to risk and focus on whole-life value
- Flexible pricing options that balance between risk and return
- Outcomes based approach focused on user needs

Service Benefits

- Experienced DevOps, Continuous Integration, Automation and Agile professionals
- Deep understanding of Government culture, challenges and Transformation agenda
- Ensures knowledge transfer is built in at all levels
- Enables innovation through continuous improvement
- Rapid deployment of Rainbow, self-directed or fully outsourced teams
- Consistent application of commercial best practice
- Regular reviews, ensuring transparency on value for money (VFM)
- Collaborative approach to stakeholder management and service delivery
- End-to-end design and delivery of underpinning systems and services

Typical roles provided

Tile Hill can provide individual consultants or full scalable architecture teams, including:

- Chief Architect
- Enterprise Architect
- Solution Architect
- Technical Architect
