1.0 Scope of our services

Service introduction

We offer a range of bespoke services that are focussed on our technical skills: reverse engineering, vulnerability research and software development. These can be applied to engagements such as product testing, malware analysis, and focussed or broad security research.

Service features

- On shore security cleared team.
- Reverse engineering, vulnerability research and software and hardware development
- Product-Security-Testing of all security aspects providing holistic-assurance
- Penetration test elements: web interface/mobile application/hardware and Radio Frequency-security
- Analysis-of-malware-samples to help organisations better defend against faced threats
- Cyber-Security-Intelligence: an attacker's view on your organisation from the outside
- Bespoke investigations into company, personal or third party security
- Development and delivery of demos, Proofs-of-Concepts and Presentations

Service benefits

- Enlist expert cyber security researchers to solve complex requirements
- Includes vulnerability and security research, reverse engineering and software development
- Provide additional value to standard security consultancy
- Deliver standalone research into specific products, services, platforms or topics
- Planned and delivered using a lightweight Agile research process

Cyber Lab - Key Skills

Secure Transformation Services deliver lasting value from our deep expertise in DataOps.

Keeping ahead in Cyber Security requires continual research and development. The Secure Transformation Services Cyber Lab delivers innovative research to support our Cyber business and our customers.

Consultancy Services – How We Can Help?

We can apply our research skills to your problems:

Cyber Security Research Consultancy

Our Cyber Lab team specialises in reverse engineering, vulnerability research and the development of tools and Proofs-of-Concept.

- Standalone research and development
- To complement a traditional Penetration Test with in-depth research
- Wide or narrow focus, depending on scope
- Broad range of platform experience

Product Testing Strategy

The security of your equipment, tools and services is your own security. From access control systems to enterprise software, if it is part of your business, it is part of your attack surface.

Our Cyber Lab and certified penetration testers can test all the security aspects of a product, providing holistic assurance:

- Web interface
- Backend infrastructure
- Mobile application
- Hardware security
- Radio Frequency security

Cyber Security Intelligence

Our cyber security intelligence offerings give you an attacker's view on your organisation and its dependencies, from the outside.

- Are you on top of your threats and attack surface?
- What does your company look like to an external attacker?
- What is out there on the Internet and Dark Web that affects your organisation's security?
- What do you know of your suppliers' security?

Service Scoping and Delivery

- Typically bespoke scope from a detailed scoping and proposal process
- Time and Materials costing on industry standard day rates
- Delivery follows a lightweight Agile-style research process
