4.0 About Accenture 5

1.0 Scope of our services

Accenture's Microsoft Azure Hybrid Cloud Migration capability is designed to help organizations seamlessly transition their IT infrastructure and applications to a hybrid cloud environment, leveraging the power and flexibility of Microsoft Azure. Our approach begins with a comprehensive discovery and assessment phase, utilizing Azure Migrate to create a detailed inventory of existing applications and infrastructure. We conduct workshops with IT stakeholders to map configuration management databases (CMDB) to the discovered inventory, ensuring a thorough understanding of the environment and any outstanding information.

SPP PS 0073

Our migration planning and execution process is tailored to deliver rapid, secure, and compliant migration of workloads to their appropriate landing zones within the hybrid cloud continuum. We classify applications using the 7Rs framework (retire, retain, rehost, re-platform, replace, rearchitect, reimagine) to identify the best migration strategy for each workload. We prioritize quick wins to provide faster time-to-value while simultaneously addressing more complex applications through parallel workstreams.

We leverage native Microsoft Azure tools such as Azure Migrate, Database Migration Service, and Data Migration Assistant, which are fully supported and often provided at no cost, supplemented by custom templates, scripts, and Power BI dashboards to accelerate migration and provide comprehensive reporting. Our migration process includes a hypercare period post-migration to verify success and ensure a smooth transition to the application teams, with rollback capabilities if needed.

Accenture also provides a managed cloud support team to handle technical support requests during and after migration, ensuring ongoing operational stability. We offer training and certification programs for client cloud engineers to build internal capabilities and foster a cloud-first culture.

Our solution includes designing and implementing secure and compliant cloud foundations (landing zones) using automated deployment scripts, ensuring governance and protection of cloud assets. We focus on minimizing disruption and transition costs by leveraging existing infrastructure where possible and implementing phased decommissioning plans. With over **276,000+** skilled Microsoft professionals globally dedicated to cloud and IT infrastructure and extensive experience managing cloud migrations for leading multinational clients, we bring deep expertise and proven methodologies to accelerate your hybrid cloud journey with Microsoft Azure, enabling scalability, innovation, and enhanced security.
