1.0 Scope of our services

The 835 Connector is an interoperability platform designed to unlock clinical, operational and administrative information in real- time and share this with other systems and mobile Apps. Maternity data (from the CIMS system)

Within any health systems environment, multiple solutions collect and process data about patients, administrative functions and day to day operational processes.

The need to ensure seamless integration and interoperability between systems is vital in order to ensure clinical safety, interventions, continuity of care and efficient, streamlined working practices. More than ever, new and innovative solutions are being deployed to drive performance and efficiency - many of which are dependent on access to real- time data.

Health information message standards such as Health Level Seven (HL7) and Fast Healthcare

Interoperability Resources (FHIR) enable sharing of information but are often severely constrained by the data which is made available to them by core source systems such as the Electronic Patient Record.

The 835 Connector overcomes this challenge by enabling direct access to core systems in order to acquire the full breadth of stored data and then distribute it to authorised third party applications in required formats.

Features

- The 835 Connector enables access to any data item collected and stored within the EPR
- It links with other tools and applications to ensure near real-time availability of data
- Supports the automated write back of information into the EPR or other target systems
- The solution is based on the industry standard Microsoft SQL server platform
- The 835 Connector progressively adds and updates third party systems with specified data
- It is designed to be flexible to support definition changes in an AGILE fashion

Deployment

The impact of deploying the 835 Connector is both rapid, transformational and cost effective.

The 835 Connector enables new and innovative solutions which require real-time data and associated updates to be deployed in a quick and effective manner, certain that data will be received as soon as it is available, allowing improved co-ordination of care and efficient use of scarce resources.

The value to the organisation is that the 835 Connector is an essential enabler required to implement modern intuitive operational solutions and workflows. As an example, patient flow solutions can deliver significant benefits by receiving actionable information via the 835 Connector such as time critical events (the need to get a patient to Radiology for a CT Scan) which in turn allows for staff to prioritise cases and ensure timely clinical interventions and hence, improved patient care.

Connected Solutions

Some of the solutions and functions which depend on the 835 Connector include:

- Command Centres
- Optimised Patient Flows

- Clinical Mobile Applications
- Automation- enhancing processes such as the generation of Porters task lists •
Acquiring data to aid Artificial Intelligence, Machine Learning and decision making
- Triggering time effective SMS messaging for Friends and Family Test.
- The 835 Connector can operate as part of our intelligent Data Analytics solution or independently, to support real-time interoperability.

We works closely with Trusts, suppliers and partners to improve patient care through the use of the 835 Connector.

4.0 About Accenture

Accenture is a leading global professional services company that helps the world's leading businesses, governments and other organisations build their digital core, optimise their operations, accelerate revenue growth and enhance citizen services—creating tangible value at speed and scale. We are a talent- and innovation-led company with approximately 799,420 people serving clients in more than 120 countries. Technology is at the core of change today, and we are one of the world's leaders in helping drive that change, with strong ecosystem relationships. We combine our strength in technology and leadership in cloud, data and AI with unmatched industry experience, functional expertise and global delivery capability. We are uniquely able to deliver tangible outcomes because of our broad range of services, solutions and assets across Strategy & Consulting, Technology, Operations, Industry X and Song. These capabilities, together with our culture of shared success and commitment to creating 360° value, enable us to help our clients reinvent and build trusted, lasting relationships. We measure our success by the 360° value we create for our clients, each other, our shareholders, partners and communities
