1.0 Scope of our services

The data-driven foundation for next-gen clinical, evidence-based care

Healthcare on Azure is the data-driven foundation for new drug discovery, advanced clinical trial design, precision medicine and evidence-based care.

This next-gen clinical data platform enables advanced genomics and population health research with the interoperability to query and exchange data across information systems. Deep analytics capabilities enable better clinical decision making, both at the point of care and across the drug development lifecycle, including hyper-targeted clinical trial design, diagnosis and treatment.

Client Challenges:

- How might we enable precision medicine at the point of care?
- How might we increase speed to market with effective new drugs and treatments while significantly cutting costs?
- What new data-driven capabilities can be used to improve population health outcomes and evidence-based care?

Solution Benefits:

This solution resolves clinical, data-driven challenges by providing value in the security of service:

- Deployed to the Microsoft Cloud for Healthcare, this is an Azure-based solution for clinical data ingestion, transformation, translation, analytics, distribution, and visualization
- Immediate access to our 54M patient clinical dataset (billions of EMR records, both inpatient and ambulatory, longitudinal data up to 12 years)
- Leverages Accenture (Intelligent Patient Platform) and Microsoft Cloud for Healthcare
- Fully standardized based on HL7 standards, International Terminology Standards, HIPAA, HITRUST and GDPR compliant
