1.0 Scope of our services

In the race to net zero, governments will need to play a balancing act between setting out and enforcing consistent, binding targets across industries, while helping to create new markets and investing in breakthrough technologies to help achieve sustainability on a large scale.

Accenture is helping clients take decisive action on all three sustainability pillars – ESG – and seize the opportunity to reframe value with new inclusive and resilient development models.

Our goal is to support public service accelerate their green transition, deliver on their sustainability commitments and act as policy stewards to support industrial decarbonization towards the 2030/50 climate targets and SDGs. Accenture is uniquely placed to be an end-to-end partner, driving change that creates sustainable impact for both today and tomorrow.

This document describes the six sustainability offerings summarised below and should be read in conjunction with the associated G-Cloud 14 Services documentation. Each of these sustainability offerings is supported by an overarching Sustainability Strategy service.

2.0 Our Overall Approach

Accenture is committed to delivering 360° value to all our stakeholders.

The Accenture Sustainability Value Promise is to embed sustainability into everything we do, with everyone we work with, creating both business value and sustainable impact, enabled by technology and human ingenuity.

Together with our partners, we're helping to solve the biggest problems our clients and the world face to achieve the United Nations Sustainable Development Goals and tackle climate change.

Figure 3: The Accenture Sustainability Value Promise

To help deliver on our commitments, our goal is to create 360° Value for all our stakeholders.

- This goal reflects our growth strategy, our purpose, our core values, and our culture of shared success. We measure our success by how well we are achieving this goal.
 - We launched our 360° Value Reporting Experience—a new way to share our progress on how we are creating this value.
 - This comprehensive digital tool brings together all our environmental, social and governance (ESG) and financial metrics, progress, and performance in one place, measuring how we are doing against our goals.

3.0 Sustainable Technology

Digital technology is one of the world's greatest enablers. It has allowed us to achieve things that were previously entirely beyond the realms of the achievable. We have created more personalized, tailored products and services than ever before. We have reached new levels of speed, agility, and affordability. We have powered entirely new experiences that have changed the lives of people.

In many ways, digital has changed the course of history for the better. However, it consumes vast quantities of energy. Newer technologies, such as AI, blockchain, and quantum computing, take up immense amounts of energy.

We are at an inflection point in how we use technology moving forward. Our goal is for technology to drive sustainability through improving technology's current social and environmental impacts and applying technology to innovate toward a sustainable future. Accenture is addressing an urgent, twofold imperative: to use technology more sustainably, and to use technology as a vehicle for being more sustainable.

Our approach at Accenture is centred around the below two concepts:

Sustainability in Technology - The harmful environmental and social impact of technology is actively managed and minimised.

- An organisation seeks to reduce or mitigate its impact on all aspects of ESG for the technology it produces and operates.
- Software is designed, deployed and operated to reduce environmental impact.
- When designing technology solutions core principles of IT eco-design are followed such as accessibility, security, frugality, etc.
- *Accenture helps companies:* measure and reduce environmental footprint of IT; improve ESG impact within the core IT and cloud operations; increase their software ecosystem's sustainability; ideate, develop, deploy, and scale sustainable IT/cloud programs; track and measure economic and ESG outcomes.

4.0 Sustainability by Technology –

- Sustainability built into organisations existing enterprise technology stack
 - Building sustainability into existing technology solutions to enable new sustainability data processing and business processes, powering organizational change without increasing technical complexity with bolt on applications.
- Technology solutions enable sustainable performance at speed and scale
 - Technology solutions used to solve for sustainability challenges.
 - Tools, applications and enhancements designed to address specific challenges such as product lifecycle analysis or emissions tracking and that can be applied to sustainability challenges such as blockchain.
- Accenture helps companies: unlock bottom-line impact by pragmatic innovation; leverage technology to create new sustainability use cases; innovate new technology products and services to deploy technology that is sustainably designed leading to responsible business and better citizen outcomes.
