1.0 Scope of our services

Approach

Software systems rarely exist in isolation. Low-code platforms can be a valuable addition to your existing environments, whether you seek to enhance flexibility within your current services or to construct a new system that requires further integration.

According to Gartner, low-code application development is projected to account for over 65% of application development activities. Start exploring low-code possibilities today to maintain a competitive edge.

The further emergence of AI technologies for legacy modernisation and hyper-automation that cover the entire Software Development Life Cycle has further accelerated in adoption of low-code application development.

Below is a list of our in-house low-code services, which aim to meet your needs throughout the entire low-code adoption journey:

- **Understand and Align:**
 - Vision workshop
- **Scope and Plan:**
 - Portfolio and backlog assessment
 - Formulating a directional business case
- **Proof of concept:**
 - Tool selection
 - Pilot
- **Industrialise and Scale:**
 - Establishing the operating model
 - BAU implementation
 - BAU support and maintenance
- **Fine-tune:**
 - Health check

Benefits of low-code development

- **Unmatched Speed:** Forget about traditional, time-consuming programming; low-code application development enables you to build applications much faster than through coding.
- **Immediate Business Value:** Thanks to low-code's drag-and-drop capabilities and predefined components, we can deliver business value up to 10x faster than with traditional development.
- **Consumer-Grade Quality:** Low-code solutions are scalable, secure, extendable, and integrate well with the rest of the IT ecosystem, facilitating the creation of consumer-grade user interfaces.
- **Superior Flexibility:** One-click deployments enable high flexibility and allow you to quickly react to changing business needs.
- **Apps That Run in Mere Minutes:** Low-code platforms leverage a cloud-first approach, making it possible to run apps in minutes. They also guarantee deployment and hosting flexibility as well as the possibility to extend the platform.

- **Multi-Channel Versatility:** Low-code applications are highly versatile. According to Forrester, they are suitable for both small- and large-scale apps, and they work equally well as mobile, web, and responsive design solutions.

Which low-code platform is the best choice for me?

Every business possesses unique needs and objectives; therefore, the answer to this question always depends on a variety of different factors and variables. Moreover, each low-code development platform has its own specific strengths, which can prove beneficial when addressing certain business challenges, but not necessarily others. As such, the key lies in distinguishing which low-code platform can be effectively utilised where and in a manner that maximises efficiency.

Our in-house experts have extensive practical knowledge of the world's leading low-code platforms, including Mendix and Microsoft Power Platform. They are well-equipped to help you choose the best lowcode platform for your business.
