1.0 Scope of our services

Service introduction

Our service enables your organisation to laterally integrate security principles into cloud service design and lifecycle, by correlating business context and industry standards to greatly minimise chance of disruption or compromise systems

Service Features

- Embedding security principles into your Secure Software Development Lifecycle (SSDLC), including detection, response and remediation capabilities.
- Architecture design approach defined by NIST and OWASP frameworks and advisories.
- Security designs and patterns defined by use of cloud-native services alongside use of threat modeling.
- Experienced and certified cloud security specialists.
- Embedding landing zone architectures, to enable secure by design as a foundational principle in systems which further ensures baseline security controls can be flexibly applied with ease at scale.
- Design and implementation of logging/monitoring to utilise cloudnative SaaS/PaaS tooling to capture all serverless and host-based logging.
- Continuous assurance integrated into operational lifecycle, including vulnerability management processes and evidenced based reporting on security control efficacy, leveraging native integrations with CIS and NIST benchmarks.

Service Benefits

- On shore security cleared teams
- Reduces complexity of implementing secure defaults.
- Enables continuous and real-time monitoring and auditing.
- Minimises organisational attack surface.
- Centralised collation of data for logging and monitoring.
- Integrates security testing and assurance early into development process.
- Improved visibility into security control compliance. Ensure critical assets are protected while using public cloud platforms

2.0 Service Implementation

Key Secure By Design Principles

Adopt a Risk-Driven Approach

We will help you to establish and maintain an understanding of your risk appetite and assess the existing risks to ensure appropriate controls are in place to protect you from the evolving threat landscape.

Design Flexible Architectures

We will helping you to architect flexible systems and services that allow for easier integration of security controls providing better protection from cyber threats, vulnerabilities and changing business requirements.

Defend in Depth

We will ensure your systems and services are created with layered controls to make it harder for attackers to fully compromise and access these systems should a control fail or be overcome.

Secure by Design Process Flow

Key Differentiators

Our expert teams blend Engineering, Architecture and Cyber Security to ensure your systems and services are designed, built, assured and ran securely from project initiation to live

5.0 About Accenture

Accenture is a leading global professional services company that helps the world's leading businesses, governments and other organisations build their digital core, optimise their operations, accelerate revenue growth and enhance citizen services—creating tangible value at speed and scale. We are a talent- and innovation-led company with approximately 799,420 people serving clients in more than 120 countries. Technology is at the core of change today, and we are one of the world's leaders in helping drive that change, with strong ecosystem relationships. We combine our strength in technology and leadership in cloud, data and AI with unmatched industry experience, functional expertise and global delivery capability. We are uniquely able to deliver tangible outcomes because of our broad range of services, solutions and assets across Strategy & Consulting, Technology, Operations, Industry X and Song. These capabilities, together with our culture of shared success and commitment to creating 360° value, enable us to help our clients reinvent and build trusted, lasting relationships. We measure our success by the 360° value we create for our clients, each other, our shareholders, partners and communities
