Data Management

1 WHAT THE SERVICE IS

Leidos offers a data management service that comprises all disciplines related to managing data. Leidos' services offer support to define, maintain and govern the process of ingesting, storing, maintaining and securing an organisation's data, along with data that is shared and consumed by key stakeholders and end-users.

FEATURES

- Data management using modern practices/technologies (cloud, hybrid);
- Experts in data strategy, governance, security and innovation;
- Advanced data modelling for relational and non-relational data stores and technologies;
- Expertise in data definition, data classification and taxonomy design;
- Managing customer information and master/reference data management;
- Metadata management and semantic layer (data virtualisation) design and implementation;
- Data design, integration/interoperability of disparate sources, third-party data, risks management;
- Experienced DBAs and data analysts in cloud and hybrid technologies;
- Performing data maturity assessment to benchmark and guide customer capabilities;
- Expertise in data issue resolution and data remediation strategies;
- Data lineage and cataloguing solutions for transparency and traceability;
- Data quality monitoring frameworks to ensure accuracy, consistency, and reliability of information;
- Scalable data pipelines for real-time and batch processing across enterprise systems;
- Compliance and regulatory alignment services (GDPR, DPA, industry standards);
- Data lifecycle management from creation to archival for efficiency and sustainability.

BENEFITS

- Enabling better decision-making by efficiently managing an organizational data;
- Managing data and improving data quality through modern AI-driven technologies;
- Minimising potential errors by establishing robust data processes and governance policies;
- Building trust and confidence around data usage within your organisation;
- Responding efficiently to market and customer needs with reliable, up-to-date data;
- Ensuring organisational data is secured and compliant with industry regulations and standards;
- Increasing efficiency by consolidating data from multiple sources into unified systems;
- Delivering consistent and scalable data architecture aligned to organisational requirements;
- Helping to identify and resolve data pain points across operations and workflows;
- Enhancing customer experience through use of modern, up-to-date technologies;
- Reducing operating expenses by optimising data use, storage, and management practices;
- Strengthening data governance and transparency with clear lineage and accountability;
- Improving business agility and scalability through cloud and hybrid data management frameworks;
- Driving innovation and competitive advantage by unlocking hidden insights from data assets;
- Ensuring long-term ROI with continuous monitoring, remediation, and lifecycle management of data systems.

OVERVIEW

Our Data Management Service offers a comprehensive collection of best practices, procedures, processes, and a wide range of accompanying solutions and technologies that allow organisations to gain control of their data resources. Leidos' Data Management services offer support to our customers to define, maintain and govern the process of ingesting, storing, maintaining and securing the data created and collected by an organisation, along with data that is shared and consumed by key stakeholders and end-users, including data from third parties.

Our Data Management service is tailored to customer infrastructure strategies, whether that be On-Cloud or Hybrid, and can be delivered as part of a wider Leidos Solution Offering or via consultancy.

The solutions offered by Leidos include:

- Metadata Management Services;
- Master Data and Reference Data Management Services;
- Semantic Layer and Data Virtualisation Services;
- Data Lineage and Cataloguing Services;
- Data Strategy (Formulation and Execution) Services;
- Data Integration and Interoperability Services;
- Data Security and Cyber Protection Services;
- Data Modelling Services;
- Data Definition and Classification Services;
- Information Management Services;
- Database Administration (DBA) Services;
- Data Quality and Remediation Services;
- Data Governance Framework Services;
- Compliance and Regulatory Alignment Services;
- Data Lifecycle Management Services;
- Real-time and Streaming Data Management Services;
- Data Innovation Services;
- Data Culture Transformation Services.

We are technology partners and experts in delivering programmes with established Cloud-Technology providers such as AWS, Microsoft Azure, Google Cloud, and other technology leaders in the data area, utilising COTS products and open-source technologies. Our offerings are tailored to customers' requirements and needs to provide maximum benefit to our customers with scalable, fit-to-purpose and cost efficient solutions.

2 ANY ONBOARDING AND OFFBOARDING SUPPORT YOU PROVIDE

Where relevant, Leidos will adopt a consultative approach with customers to define and validate their requirements in order to determine how best to engage with the services. The onboarding and offboarding process is dependent on the specific requirements of the solution, and the delivery methodology agreed upon.
