Cloud DevOps and Agile Consultancy

1 WHAT THE SERVICE IS

Leidos provides expert guidance to establish best in class Cloud Agile DevOps practices to ensure your DevOps teams deliver business agility and value. Leidos provides capability using resource augmentation and/or fully managed squads. Our efforts focus on boosting continual improvement, velocity and increasing value for money.

FEATURES

- Modern software development and enhancement using Agile methods.
- Evaluate existing systems for Agile cloud transitions.
- Create Agile and DevOps roadmaps for end-to-end cloud migration.
- Opt for best Agile tools, both commercial and open source.
- Cloud-agnostic development, optimised for Agile environments.
- Implement latest web technologies and cloud-native architectures.
- Employ Agile, DevSecOps practices and technologies.
- Deploy security-cleared DevOps engineers for sensitive Agile projects.
- Expert in critical Agile solutions with leading tools like Jira.
- Adhere to industry best practices with Agile-focused engineering playbooks.

BENEFITS

- Modernise operations through digital transformation of customer applications.
- Break down silos, foster agile and automated DevOps culture.
- Prioritise DevOps tasks to maximise impact and benefits.
- Accelerate development with Leidos' proven platforms and frameworks.
- Boost development efficiency and eliminate bottlenecks through automation.
- Use a technology-agnostic approach for optimal solutions and hosting.
- Offer extensive architectural expertise for detailed, comprehensive design insights.
- Access experienced SecDevOps practitioners for secure mission delivery.

OVERVIEW

Leidos specialises in providing top-tier guidance for establishing and advancing Cloud Agile DevOps practices, focusing on delivering both business agility and significant value. Our approach encompasses a comprehensive understanding of cloud frameworks, such as the AWS Well-Architected Framework and Microsoft Azure's best practices, ensuring our recommendations and implementations are both robust and state-of-the-art.

At Leidos, we recognise the critical importance of security within the cloud and DevOps environments. Our team integrates this priority throughout all processes by providing guidance on advanced DevSecOps practices. This not only enhances security postures but also integrates seamlessly with our Agile methodologies to maintain a high standard of security compliance and operational safety.

Our expertise extends to helping clients, especially those less mature in their digital transformation journeys, to fully leverage the benefits of cloud technologies and DevOps practices. We assist in evaluating existing systems to identify the most effective paths for Agile cloud transitions, ensuring that our clients can modernise their operations without disruptions. Through detailed roadmaps for end-to-end cloud migration, we guide our clients through every step of their transformation journey, focusing on continual improvement and accelerating development velocity.

Utilising a mix of commercial and open-source Agile tools, Leidos tailored solutions best fit the unique needs of each client. This technology-agnostic approach not only helps in selecting the optimal tools and platforms but also ensures that the solutions are future-proof and scalable. By creating cloud-agnostic development environments optimised for Agile practices, we provide our clients the flexibility to operate across multiple cloud platforms efficiently.

Through our other G Cloud offerings our capability extends beyond mere consultation to include resource augmentation and fully managed squads. This allows us to boost development efficiency for our clients by eliminating bottlenecks through automation, including AI assisted development tools, and continually enhancing the velocity of their continual improvement processes. The deployment of modern software development techniques and the latest cloud technologies support the digital transformation of customer applications, thereby modernising operations and breaking down silos within organisations.

The benefits of partnering with Leidos are manifold. Clients experience a transformation in their operational frameworks that prioritises DevOps tasks to maximise impact. Our extensive architectural expertise delivers detailed, comprehensive design insights which are crucial for deploying robust and effective solutions. Moreover, our clients gain access to experienced SecDevOps practitioners who are skilled in delivering secure missions.

In summary, Leidos offers a holistic service that encompasses planning, implementation, and scaling of cloud and DevOps initiatives. By adhering to industry best practices and utilising leading tools like Jira for critical Agile solutions, we ensure that our engineering approaches are not only current but also predictive of future needs. Whether it's through fostering an Agile and automated DevOps culture or prioritising modernisation and digital transformation, Leidos is equipped to take every client through a successful and secure journey into cloud and DevOps maturity.

2 ANY ONBOARDING AND OFFBOARDING SUPPORT YOU PROVIDE

Where relevant, Leidos will adopt a consultative approach with customers to define and validate their requirements to determine how best to engage with the services. The onboarding and offboarding process is dependent on the specific requirements of the solution, and the delivery methodology agreed upon.
