

SharePoint Engineering Services

Service Definition

Summary of Service

Telana has over 20 years of deep technical expertise in SharePoint, offering a wide range of engineering services that cover the entire lifecycle of the platform. Our services are designed to help organisations manage, migrate, and modernise their SharePoint environments, ensuring they are secure, efficient, and aligned with business objectives.

Service Features

- / Migration and Upgrades
- / Workflow and Process Automation
- / Governance, Data & Security
- / Custom Solutions and Development

Service Benefits

- / Leverages over two decades of deep technical expertise to maximise your SharePoint investment.
- / Modernises your collaboration platform through seamless migrations and strategic upgrades.
- / Enhances organisational efficiency by automating manual tasks and streamlining business processes.
- / Ensures data is secure, compliant, and well-governed across the entire SharePoint environment.
- / Provides custom-built solutions perfectly tailored to your unique business requirements.

Service Description

Migration and Upgrades

We provide expert guidance and technical execution for migrating and upgrading your SharePoint environment. Whether you are moving from an on-premises version to SharePoint Online or upgrading to the latest platform, our team ensures a smooth, secure, and efficient transition with minimal disruption to your business operations.

Workflow and Process Automation

Our team helps you transform your business operations by automating workflows and processes within SharePoint. We analyse your existing procedures to identify opportunities for automation, designing and implementing solutions that reduce manual effort, improve consistency, and accelerate productivity across your organisation.

Governance, Data & Security

We help you establish a robust framework for governance, data management, and security within SharePoint. Our experts work with you to define and implement clear policies and controls for content management, data lifecycle, and user access, ensuring your environment remains secure, compliant, and aligned with best practices.

Custom Solutions and Development

We design and build bespoke solutions and custom applications tailored to your specific organisational needs. From custom web parts and extensions to fully integrated line-of-business applications, our development team leverages the full power of the SharePoint framework to deliver solutions that solve your unique challenges and drive business value.
