

Purview Data Governance and Data Lifecycle Management (DLM) Services

Service Definition

Summary of Service

Telana provides a specialised suite of services for Microsoft Purview, focused on helping organisations to secure, govern, and ensure compliance across their entire data estate. Our services range from initial assessments and strategic design to full implementation and ongoing managed support, transforming your data governance from a best-practice goal into a mandatory, automated framework.

Service Features

- / Assessments
- / Strategy and Governance
- / Policy Definition and Design
- / Implementation

Service Benefits

- / Transforms data governance from a theoretical goal into a practical, automated framework.
- / Provides a clear and comprehensive view of your entire data estate to ensure security and compliance.
- / Delivers an end-to-end service, from initial assessment and strategic design to full implementation and support.
- / Enables your organisation to secure, govern, and manage the lifecycle of its data effectively.

Service Description

Assessments

Our service begins with a comprehensive assessment of your current data landscape and governance maturity. We work with you to discover and map your data assets, identify sensitive information, and evaluate your existing compliance posture. This initial phase provides the critical insights needed to design a tailored and effective data governance strategy.

Strategy and Governance

Based on the assessment findings, we collaborate with your stakeholders to develop a clear strategy and governance model for your data. We help you establish the principles, roles, and responsibilities required for effective data oversight, creating an actionable roadmap that aligns your data governance initiatives with your core business objectives.

Policy Definition and Design

We translate your governance strategy into specific, actionable policies within Microsoft Purview. Our experts design and configure data classification schemes, sensitivity labels, and retention policies to automate the management and protection of your data. This ensures that your data is consistently governed according to your business rules and compliance requirements.

Implementation

Our team manages the end-to-end implementation of your Microsoft Purview solution. We handle the technical deployment, configure the defined policies, and ensure the platform is fully integrated with your existing data sources. We provide the expertise needed to move from design to a fully operational and automated data governance framework.
