

Cloud Security Audit, Review and Remediation Services (Google and Microsoft)

Service Definition

Summary of Service

Our Cloud Security Audit, Review, and Remediation service is a structured engagement designed to provide you with a clear, expert-led assessment of your cloud security posture. This service benchmarks your environment against recognised industry standards, such as CIS Level 1, and your specific compliance needs. The service is delivered in distinct phases, providing a complete cycle from discovery to resolution.

Service Features

- / Security Audit and Assessment
- / Gap Analysis and Review
- / Remediation Roadmap
- / Remediation Implementation
- / Strategic Consultancy

Service Benefits

- / Provides a clear, expert-led assessment of your complete cloud security posture.
- / Benchmarks your environment against recognised industry standards like CIS Level 1.
- / Delivers a complete cycle of service, from initial discovery to final resolution.
- / Provides an actionable roadmap to address identified security gaps and strengthen your defences.
- / Ensures your cloud environment meets specific compliance and regulatory needs.

Service Description

Security Audit and Assessment

The service begins with a comprehensive, expert-led audit of your cloud environment (Google Cloud and/or Microsoft Azure). We conduct a deep assessment of your security configurations, access controls, and network architecture, benchmarking your entire setup against recognised industry standards like the Center for Internet Security (CIS) Level 1 benchmarks.

Gap Analysis and Review

Following the audit, we perform a detailed gap analysis. This involves comparing the findings from the assessment against the required security standards and your specific compliance obligations. We present the results in a clear and understandable format, highlighting any vulnerabilities, misconfigurations, and areas of non-compliance.

Remediation Roadmap

Based on the gap analysis, we develop a strategic and prioritised remediation roadmap. This actionable plan outlines the specific steps, timelines, and resources required to address each identified security gap. The roadmap is designed to be practical, focusing on the most critical vulnerabilities first to deliver the greatest impact on your security posture quickly.

Remediation Implementation and Strategic Consultancy

Our team can either guide your internal teams or take a hands-on role in implementing the remediation roadmap. Throughout the process, we provide ongoing strategic consultancy, offering expert advice and ensuring that the security improvements are implemented effectively and sustainably, strengthening your organisation's overall security posture for the long term.
