

Google Workspace Consultancy and Integration Services

Service Definition

Summary of Service

Telana provides consultancy and integration services to enable the configuration and customisation of your Google Workspace environment. As well as optimising the standard configuration of Google Workspace, this includes implementing bespoke solutions linked to the Workspace environment or connecting it with other environments, either in the cloud or on-premise.

Service Features

- / Requirements and Discovery
- / Configuration and Customisation of your Google Workspace environment
- / Bespoke Development using Google App Script, APIs, and custom Gadgets
- / Integration with third-party APIs and web services
- / Tailored solutions using Google Sites

Service Benefits

- / A tailored engagement ensures a smooth deployment that meets your exact needs.
- / Accelerated functionality is delivered by our team of Google experts.
- / Removes the resource requirement for your own staff to handle complex development.
- / Proactive management of deployment risks ensures a successful outcome.
- / The service is tailored to fit your specific requirements.

Service Description

Requirements and Discovery

Every engagement begins with a detailed requirements and discovery phase. We work closely with your team to understand your unique business challenges, processes, and goals. This allows us to design a tailored solution and a strategic roadmap that ensures the final configuration and customisation of your Google Workspace environment is perfectly aligned with your objectives.

Configuration and Customisation

Our experts go beyond the standard setup to optimise your Google Workspace environment. We configure every aspect of the platform to suit your needs and develop customisations to enhance functionality. This includes creating custom Google Gadgets and using Google Sites to build tailored user experiences and internal applications.

Bespoke Development and Integration

We unlock the full potential of Google Workspace by developing bespoke solutions and integrations. Using Google App Script and the full suite of Workspace APIs, our team builds custom functionality and automates complex workflows. We also manage integration with external systems, connecting Google Workspace to third-party APIs and other web services to create a unified and powerful digital ecosystem for your organisation.
