

Custom Software and Application Development Services

Service Definition

Summary of Service

Telana provides application development and software engineering services based on both Google Cloud Platform and Microsoft Azure to design, build, and support the Software services required by customers. Our services are available to ensure projects are set up and managed correctly from the start, focusing on full application development and support.

Service Features

- / Requirements and Discovery
- / Solution development and deployment
- / CI/CD enhancements
- / Full deployment support (including training and change management)
- / Ongoing support and managed services

Service Benefits

- / Tailored engagement ensures smooth deployment.
- / Accelerated functionality delivered by experts.
- / Removes resource requirement for your own staff.
- / Proactive management of deployment risks.
- / A tailored service designed to fit your specific requirements.
- / Ongoing enhancements are delivered automatically, benefiting your business.

Service Description

Requirements and Discovery

Our process begins with a thorough requirements and discovery phase where we work closely with you to understand your business objectives and challenges. This ensures we define a clear project scope and a technical solution that is perfectly aligned with your needs, setting the foundation for a successful development project.

Solution Development and Deployment

Our expert team designs and builds bespoke solutions on the Google Cloud and Microsoft Azure Platforms. Following industry best practices, we manage the entire development lifecycle, from architectural design and coding to rigorous testing and final deployment, ensuring a robust and scalable application.

CI/CD and Enhancements

We implement and manage Continuous Integration and Continuous Deployment (CI/CD) pipelines to automate the build, test, and deployment process. This accelerates the delivery of new features and ensures that your application can be updated and enhanced efficiently and reliably, with minimal disruption.

Ongoing Support and Managed Services

Following deployment, we offer comprehensive support services to ensure the long-term success and stability of your application. This includes full deployment support with user training and change management, as well as ongoing managed services to handle maintenance, troubleshooting, and continuous improvement, allowing your team to focus on core business activities.
