Service Overview

The Power Platform Health Check service is designed to facilitate an independent and unbiased assessment of your Enterprise Power Platform Solution. ANS will review and carry out a targeted approach to solution validation and audits for Power Platform in a way that ensures that your solutions meet the best practices and standards for performance, reliability, and security. The end results in identifying any challenges and issues, and make recommendations for you to move forward with.

The Health Check scope covers the following areas.

- **Solution Layering:** Assessment of the solutions layering architecture, ensuring separation of concerns (presentation, logic, data) and adherence to best practices in modular design
- **Security:** Evaluation of security roles and permissions associated with technical estate, ensuring appropriate access controls and compliance with security policies.
- **Best Practices:** Review of development methodologies, naming conventions, documentation, and design patterns adhered to in the solutions construction.
- **Extensibility:** Analysis of the solutions modularity and extensibility, focusing on the ease of adding new features, making enhancements, and accommodating changes.
- **Layout and User Experience (UX):** Assessment of the solutions layout, navigation, and overall user experience, including considerations for intuitive design, responsiveness, and accessibility.
- **User Interface (UI) Design:** Review of UI design elements, consistency in styling, branding adherence, and usability principles applied throughout the solutions.
- **Code Review:** Evaluation of code quality, readability, optimisation, and adherence to Power Platform / coding best practices and standards.
- **Developer Standards:** Examination of developer standards followed during solution development, including version control, testing methodologies, error handling , and performance optimization.
- **Architecture Suitability:** Assessment of the solutions architecture in alignment with your organisations broader IT strategy, evaluating its scalability, performance and compatibility with existing and future systems.
- **Data Handling and Integrations:** Review of data handling methodologies within the solution, ensuring secure and efficient integration with relevant data sources and systems.
- **Compliance and Governance:** Verification of adherence to industry regulations, compliance standards, and governance policies applicable to the solution.
- **Recommendations:** Suggestions for improvement, potential enhancements, or adjustments to better align the solution with IT landscape and strategic objectives.

Delivery Approach

The Power Platform Health Check will be conducted through a series of remote workshops with the customers project team and a system check of the solution deployment and components.

The engagement will be delivered remotely as follows:

1. Implementation Review Session
 - a. Review the scope as listed in the Service Overview
2. Review Findings (ANS Internal)
 - a. Write up and review the information gathered from the Implementation Review Session
 - b. Identify proposals for the problem areas
 - c. Create presentation.
3. Insights and Recommendations Session
 - a. Present findings and recommendations
 - b. Agree next steps
