Overview

Axis12 can help you to conform with accessibility compliance both now and in the future. To do this we've partnered with Sitemorse, leaders in digital accessibility. A website and its content are ever changing and evolving but using Sitemorse enables you to keep on top of your accessibility compliance. Our Sitemorse partnership provides you with new levels of automation and intelligence you can track, helping you to improve content in the most efficient order.

Our team will create a structured and intuitive accessibility roadmap for you to ensure your site complies with the Equality Act 2010 and The Public Sector Bodies (Websites and Mobile Applications) (No. 2) Accessibility Regulations 2018. Working with you and Sitemorse so you achieve and maintain WCAG 2.1 AA accessibility across your digital estate.

Areas of Expertise

Full Accessibility Audit

Our full accessibility audit will help you pinpoint areas where you need to improve to meet current compliance. Our team can complete an audit of your current website and provide you with a report of our findings, confirming the areas which need development and their order of importance.

Identification of High Priority Areas

It's key when tackling accessibility that you are able to identify the priority level of any work required. Our team can help you to prioritise your workload, creating a roadmap that lays out any development in importance order to help you ensure you tackle the key areas first.

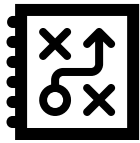

Real-Time Accessibility Checking (before publishing)

It's crucial that the information on your website up to date, including new or updated pages, text, images or documents. With our real-time accessibility checker, you can ensure your new content is compliant. Your team can also complete checks before publishing, so you know all newly published content is compliant.

Unlimited Pages, PDFs and Office Docs

Some of the areas where a website fails accessibility compliance is with documents. All our accessibility services are available on all your content, whether these are webpages, images or documents such as PDFs and office Docs.

High-Level Implementation Plan

Our team will help you to design and implement a high-level plan to ensure your website is compliant. This plan will cover any fixes and process changes required to meet compliance. We will also work with you to train your relevant team members to ensure you can continue to stay compliant in the future.

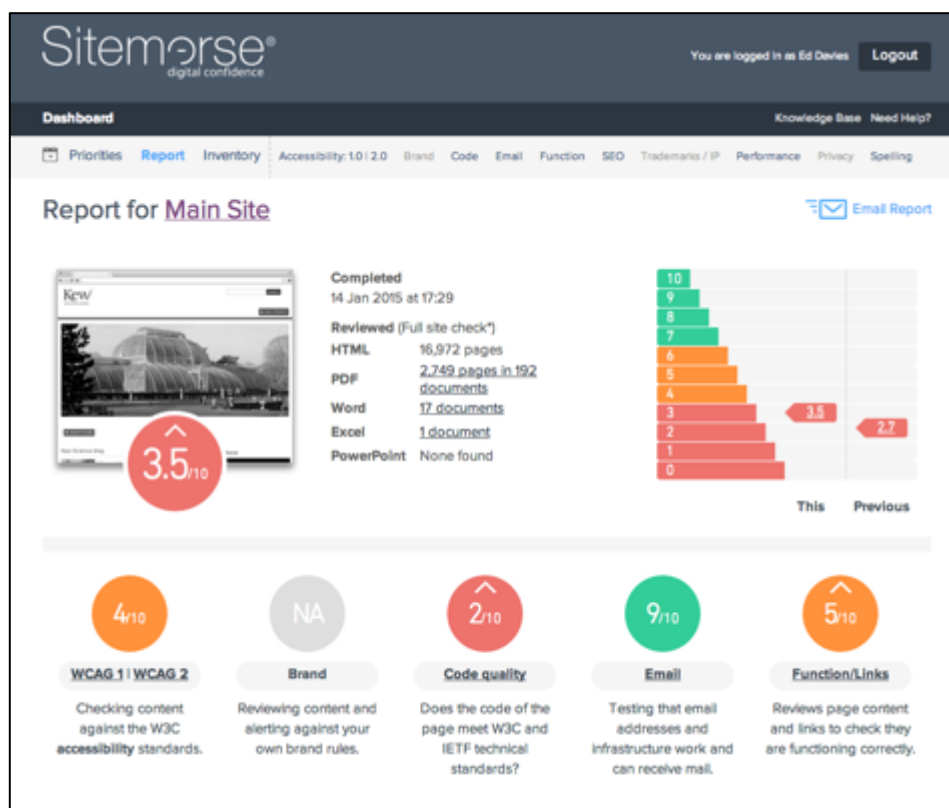

Project Management and Coordination

If required, we will project manage and coordinate your accessibility compliance project. We are adept in many forms of project management. Our favourite is Agile (Scrum), but we will be happy to work according to the method you choose. Please see the methodologies and approach section for more detailed details about our project management experience.

Ongoing Monitoring via the Sitemorse Interface

Accessibility compliance is an on-going process. We will provide access to on-going monitoring via SiteMorse. This approach will allow your team to track your website compliance regularly, enabling you to make changes when required to stay compliant.

An example of the Sitemorse report tool, which displays issues found including broken links, code quality and content issues. It also provides an accessibility score.

Drupal Sitemorse Interface and Deep Workflow Integration

Is your site built on Drupal? We will provide an interface direct to Sitemorse for you. This will allow you to track your website compliance on a regular basis. A deep workflow integration is also available.

Methodologies and Approach

All our project managers are experienced in both PRINCE2 and AGILE project management. By clearly defining the phases of the initial delivery – from discovery and concept to design and development – we can choose the method that fits best with your organisation.

An Agile approach (e.g. SCRUM) can be extremely effective in offering you early sight of software, rapid development, incremental delivery and regular prioritisation of features.

The Agile Process

Waterfall methods (e.g. PRINCE2) are preferred by some clients because they allow monitoring of progress via more traditional means – such as detailed project plans and Gantt charts – that are more in keeping with their internal governance structures.

Our team have also developed ways to use a blended approach effectively, providing agile and rapid delivery with flexibility of prioritisation and specification alongside the structure, accountability and predictability that comes with a Waterfall approach.

Our project delivery is supported by systems that manage the detailed specifications, including acceptance criteria, user stories and results from functional and non-functional testing. These are available to our internal staff, and staff from third parties and partners to ensure clear specifications are available to everyone involved in the delivery.

Pricing

Please consult separate pricing document for details of our pricing.
