Introduction

Our Intranet solution can be deployed in minutes to provide you with a fully featured platform. Its features meet all mandatory UK Government requirements with regards to accessibility and security along with advanced content management features typical of any enterprise-grade CMS.

The Drupal distribution provides a core set of user interface elements, functionality and features that can be used as the basis for any Intranet. Resources traditionally directed at licenses, build, and implementation can be directed towards content and customisations. The distribution meets the majority of core requirements for government intranets in the base installation and provides a foundation for more complex requirements requiring enhanced features and customisation.

Benefits

Built on Drupal

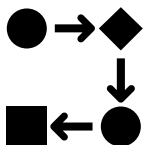

Built in Drupal our Intranet solution contains preselected modules and front-end themes. It is easily extensible with any of the 11,000+ Drupal modules developed for site-specific functionality.

WCAG 2.0 Level AA

Our Hosted Intranet has been designed and developed with government guidance in mind and to meet Web Content Accessibility Guidelines, to WCAG 2.1 AA.

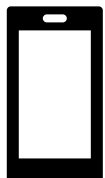

Our Hosted Intranet has also been independently audited for WCAG 2.1 AA compliance.

Sophisticated Workflow

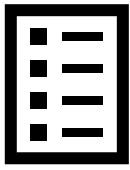

Create customised workflows and roles to manage who has access to create and amend content. Your chosen users can then moderate, review, publish and un-publish content and tailor settings for 7 distinct content types.

For peace of mind, all previous versions of a page are retained and can be reinstated if required. If you have time sensitive messaging, you can also schedule page content to publish or un-publish on dates in the future.

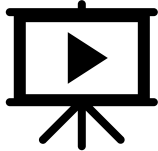

Responsive Mobile Device Display

Our Hosted Intranet works out-of-the-box on desktop, tablet and mobile platforms, so there is no need to create and update distinct versions. The base themes for customising your site are also responsive design ready to automatically implement best practice in responsive mobile design.

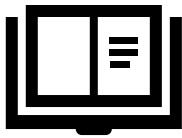

Pre-Populated Sample Content

Need help in the setup of your Hosted Intranet site? You have the option to install example content that mimics how a full intranet site should look. Replace the example content with your own to keep the structure or remove it completely and publish your own content.

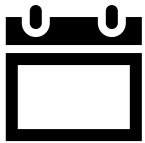

Media Room

Customise your approach to the media and announce important information to your audience from the built-in Media Room. Here you can display press releases, images and other important downloadable files for distribution.

Publication Management

Our intranet provides a publications section to make available publicly released documentation. This could include house policy advice, white papers, matters of public administration and more, which can be attached as files or added as native HTML.

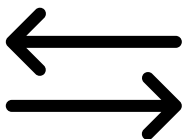

Event Management

Use the Events Management section to customise, list and promote upcoming events.

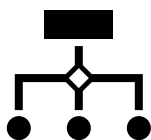

Search

Our Hosted Intranet includes the Apache Solr search as standard – the same search technology that powers major search engines.

RSS Feeds

Use our built-in RSS feeds to create customised and aggregated content updates.

XML Sitemap

Customise your XML sitemap to only include the relevant elements and sync with Google Webmaster Tools to enhance your Intranet search results and search engine optimisation (SEO).

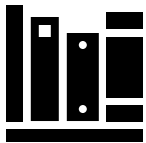

Rich Content Editing

Use WYSIWYG formatting for rich content editing. Insert inline images, videos, bullet points and numbered lists or directly cut and paste from Microsoft Word to keep original formatting.

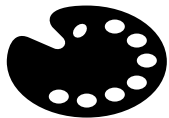

Drag and Drop Layouts

Create and manage customisable landing pages with easy to use drag and drop layouts.

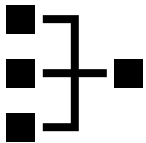

Asset Management

Upload and re-use images and files through the Intranet, by using the Media module as a searchable asset library.

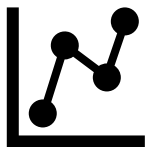

Configurable Content and Custom Pages

Change and update anything and everything on the site. Amend navigation structures or add new sections with just a few clicks.

Content Tagging

Use Drupal's powerful Taxonomy module to define and manage fine-grained content categorisation.

Website Analytics

Synchronise your website with Google Analytics out-of-the-box. Extend your website analytics with Drupal modules for most major analytics systems.

Search Engine Optimised

Ensure your site is immediately optimised for search engines with our built-in tools. Create and set customised URL paths and page titles, update the sitemap XML and include specific keyworded site content.

Pricing

Subscription to our intranet service costs £1,100 per unit per month (ex VAT). This price includes setup and common onboarding tasks, as well as a guarantee of uptime and backups. It also includes software assurance - regular software updates to ensure your intranet is kept secure.

A unit is a typical Intranet instance (consisting of several servers) that will usually be ample for organisations of up to 500 users. Bigger organisations are not compelled to buy more units, but we would recommend adding additional units per additional block of 500 users.

A detailed breakdown of what is included in the subscription cost is available on request via info@axistwelve.com.
