SECURE CLOUD DESIGN, DEVELOPMENT, DELIVERY, MANAGEMENT AND SUPPORT

CACI has been delivering high quality, innovative, robust and secure data engineering solutions to HMG and Primes for over 16 years. We enable analytics by getting critical data to the right place at the right time. A key aspect to useful data engineering is understanding the domain and constraints within which your organisation operates; we achieve this with comprehensive data modelling. This allows us to design a service which meets your needs.

Our technology agnostic approach allows us to generate solutions that provide value for money and seamlessly integrate into your organisation's current technology estate. Managing data distribution through Microservices and API management, we create value chains that manage the landing, enrichment, fusion, and exploitation of your data; augmenting human knowledge to provide context and insight at scale. The security, open-standards and global governance of your data should be at the heart of any data infrastructure/platform.

Encoding, encryption, compression and integrity checking is designed into our solutions from inception and verified through compliance and audit mechanisms, as-well as fine-grained data access control to give total assurance and control.

We work across the full data lifecycle across multi-cloud and hybrid cloud ecosystems. From Acquisition and Collection through Enrichment and Augmentation to Serving and Predicting we work with your analysts and data users to incorporate data analytics into the solution and enable decision science at the heart of the mission.

CACI prides itself in being easy to do business with. After actively engaging with our customers to make sure our solution is the right fit, we can offer a flexible commercial solution to ensure value for money. We have three typical models, namely Time & Materials, Fixed Price or Managed Service based. The following table provides more detail:

Model	Detail
Time and Materials (T&M)	T&M is appropriate where the requirements need further elaboration and are subject to change, or where customer consumption of certain elements, such as Architect or DevOps resource is variable. T&M is typically calculated on day rate using the published Lot 3 - Cloud Support Rate Card.
Fixed Price (FP)	Fixed pricing can be offered when the statement of work requirements are clearly defined and agreed by both parties. This necessitates the availability of mature and accurate input documents so that the amount of effort to achieve the project deliverables can be calculated. In addition, any project risks, issues, assumptions or dependencies need to be stated and measured. Pricing is available on request and is based upon the day rates shown in the published Lot 3 - Cloud Support Rate Card.
Managed Service (MS)	Managed Services are typically delivered via CACI's 24x7, 3-tier technical support working within our ITIL aligned Service Management system. Pricing is tailored to meet the customer's Service Level Requirements and is based upon the day rates shown in the published Lot 3 - Cloud Support Rate Card.

Full details and pricing can be found within CACI's published Lot 3 - Cloud Support Rate Card which shows the range and cost of expertise.
