1. Product Overview

Colt IP Guardian is a network-based distributed Denial of Service (“DDoS”) Mitigation Platform which uses technology platforms, software, and equipment in conjunction with the “Underlying Services” to provide customers with detection and Mitigation against DDoS attacks.

Automated Threat Detection and Mitigation

IP Guardian provides a full suite of countermeasures that remove distributed denial of service attack traffic while enabling the flow of legitimate traffic – all without interrupting the network. It is proven to be effective for detecting and removing threats such as high-volume flood attacks, stealth application layer attacks and attacks hidden in SSL packets. It supports both IPv4 and IPv6 infrastructure. Fully automated, IP Guardian keep your network and services up 24 hours a day, seven days a week, 365 days a year.

Mitigation in Seconds

Key to effective mitigation is the ability to identify and block attack traffic while allowing non-attack traffic to flow through to its intended destination. Whether it's a high-volume flood attack designed to exhaust bandwidth capacity or a targeted attack looking to bring down a website, IP Guardian can isolate and remove the attack traffic in as fast as a few seconds. Methods include identifying and black-listing malicious hosts, IP location-based mitigation, protocol anomaly-based filtering, malformed packet removal and rate limiting (to gracefully manage non-malicious demand spikes). Mitigations can be automated or left to be manually triggered by the customer.

Real-Time Reporting

Our real-time mitigation dashboard is a single screen that shows users exactly what is generating a DDoS alert and what effect the countermeasures are having on the attack. If requested, It provides the ability to modify countermeasures and delivers full packet capture and decode to get a detailed view of both normal and attack packet streams. This information is stored for future reference and management reporting. All IP Guardian customers will get access to this reporting via a dedicated website.

Unlimited Mitigations

IP Guardian DDoS mitigation is unlimited, A fixed monthly fee covers all mitigations, regardless of the number of mitigations per year or the size of the attack. The customer is charged for clean traffic bandwidth based on the bandwidth of the related Colt IP Access which will set the price of the service, and there are no additional or hidden costs.

2. Pricing Tables

Pricing is based on 1 year term and to protect a single Colt IP Access Circuit.

Bandwidth	Non Recurring Charge	Monthly Recurring Charge
1Gb	£1,750	£2,833
2Gb	£3,063	£3,392
3Gb	£3,063	£4,163
4Gb	£3,063	£4,814
5Gb	£3,063	£5,386
6Gb	£3,063	£5,899
7Gb	£3,063	£6,377
8Gb	£3,063	£6,818
9Gb	£3,063	£7,231
10Gb	£3,063	£8,627
20Gb	£4,813	£12,129

Please note that Colt is also able to offer options such as full 24/7 proactive management, hybrid services that include granular mitigation at customer premises and very high service clean bandwidths. These can be priced separately once the protected service requirements are fully agreed upon between Colt and our customer.

3. Disclaimer

Colt's proposal is not intended to create a binding contractual commitment. A signed Colt agreement is required to make pricing/services effective. This document may not be altered or edited to create an agreement. If you wish to purchase services on a term arrangement, please contact your Colt Account Manager.
