1. Insight

Insight leads the delivery of transformative solutions, supported by a powerful ecosystem of over 6,000 global partners including Microsoft, AWS, and Cisco.

As a Fortune 500 company with a long-standing history of delivering trusted services to the UK Public Sector, we combine our own deep expertise in consulting, advisory, and transformation with partner innovation to create holistic solutions across cloud, data, modern workplace, cybersecurity, and application services.

Guided by proven methodologies and ESG principles, we work collaboratively to design and implement tailored strategies that drive measurable business impact while promoting sustainability and governance excellence.

2. Insight for the Public Sector

Your End-to-End Digital Transformation Partner

As a leading Solutions Integrator, Insight combines deep technical expertise with a vast partner ecosystem to help UK government organisations modernise, innovate, and deliver citizen-centric services. We hold places on over 85 public sector frameworks, offering a compliant, efficient route to digital transformation.

We don't just supply IT; we design, deploy, and manage the solutions that secure your data and unlock value.

Core Areas of Expertise

- **Innovation, Data & AI:** we deliver end-to-end data science and custom AI solutions. From modernising data platforms to deploying bespoke machine learning and spatial computing, we help you unlock the value of your data to drive operational efficiency.
- **Modern Infrastructure & Cloud:** Building scalable, hybrid foundations that reduce technical debt and support multi-cloud strategies.
- **Modern Workplace:** Empowering the public sector with secure, flexible tools to work from anywhere, attracting talent and improving productivity.
- **Cybersecurity:** Comprehensive managed security services, threat detection, identity protection, and compliance management to ensure your data remains sovereign and secure.
- **Modern Apps:** Agile application development creating meaningful and impactful tools that link to tangible benefits, improvements and cost savings.

Our Approach: Consulting, Lifecycle, & Managed Services

We deliver value at every stage of your technology journey, ensuring accountability from strategy to support:

- **Consulting (Architecting the Future):** We bridge internal skills gaps with data-driven strategy. From "Discover & Design" to full-scale migration planning, we ensure your investments solve real public sector challenges.
- **Lifecycle (Seamless Execution):** We take the risk out of procurement and deployment. Leveraging global buying power, we handle everything from supply chain management and imaging and implementation to sustainable asset disposal (ITAD).
- **Managed Services (Always-On Support):** Shift from "keeping the lights on" to innovation. We provide 24/7 infrastructure monitoring, cloud cost optimisation (FinOps), and security operations to ensure resilience.

3. Service Pricing

Note - 'Prices are as per SPA24 MOU Gov agreement and are based on signing a new Enterprise Agreement or Renewing an existing Enterprise agreement.'

Lot	Service Name	Service Description	Sell Price Ex Vat. Monthly	Sell Price Ex Vat. 12 months
Lot 1 A	Azure API Management	Azure API Management is a platform service that enables organisations to publish, secure, transform, maintain, and monitor APIs. It provides a gateway that sits between API consumers and backend services, handling authentication, rate limiting, caching, and analytics. The service requires an Azure subscription and supports both cloud-hosted and on-premises backends.	POA	POA
Lot 1 A	Azure API Center	Azure API Center is a centralised inventory and governance service for tracking, discovering, and managing APIs across an organisation. It enables API program managers, developers, and IT administrators to register and catalogue APIs regardless of their type, lifecycle stage, or deployment location. The service supports REST, GraphQL, gRPC, SOAP, WebSocket, and other API types, and works alongside any API management solution including Azure API Management and third-party platforms. Azure API Center provides design-time governance through API definition linting and analysis, custom metadata management, and a developer portal for API discovery. The service is available in Free and Standard plans, with the Free plan having usage limits. Users must have an Azure subscription and appropriate role assignments to manage APIs.	POA	POA
Lot 1 A	Azure App Configuration	Azure App Configuration is a managed service that provides centralised storage for application settings and feature flags. It allows developers to separate configuration from code and manage settings across multiple applications and environments. The service stores non-secret configuration data and integrates with Azure Key Vault for secrets.	POA	POA
Lot 1 A	Azure App Service	Azure App Service is a fully managed platform for building, deploying, and scaling web applications, REST APIs, and mobile backends. It supports multiple programming languages and frameworks including .NET, Java, Node.js, Python, and PHP. The service handles infrastructure management, security patching, and load balancing automatically.	POA	POA
Lot 1 A	Azure App Service Environment	Azure App Service Environment is a fully isolated and dedicated hosting environment for running App Service applications at high scale. It deploys App Service infrastructure into a customer's virtual network, providing network isolation and fine-grained control over inbound and outbound traffic. The service supports Windows and Linux web apps, Docker containers, Azure Functions, and Logic Apps. App Service Environment v3 is the current version and requires the Isolated v2 pricing tier. It supports up to 200 instances across all App Service plans within a single environment. Users can optionally deploy on dedicated host groups for hardware-level isolation, though this limits scaling and is available only in limited regions. Zone redundancy is available in supported regions and requires a minimum of two instances per App Service plan.	POA	POA
Lot 1 A	Azure Container applications	Azure Container Apps is a serverless container platform that enables running microservices and containerised applications without managing infrastructure. It is built on Kubernetes but abstracts away cluster management complexity. The service automatically scales containers based on HTTP traffic, events, or custom metrics. Users must provide container images and define scaling rules; Kubernetes expertise is not required.	POA	POA
Lot 1 A	Azure DevOps	Azure DevOps is a suite of development services that provides tools for planning, developing, testing, and delivering software. It includes Azure Boards for work tracking, Azure Repos for source control, Azure Pipelines for CI/CD, Azure Test Plans for testing, and Azure Artifacts for package management. The service is available as a cloud service or self-hosted through Azure DevOps Server.	POA	POA
Lot 1 A	Azure Load Testing	Azure Load Testing is a managed service that generates high-scale load against applications to identify performance bottlenecks. It uses Apache JMeter scripts to simulate user traffic and integrates with Azure Monitor for server-side metrics. The service can test applications hosted anywhere with a publicly accessible endpoint.	POA	POA
Lot 1 A	Azure Container Registry	Azure Container Registry is a managed private registry service for storing and managing container images and related artifacts. It supports Docker container images, Helm charts, and OCI artifacts. The service provides geo-replication, image scanning, and integration with Azure container services.	POA	POA

Lot	Service Name	Service Description	Sell Price Ex Vat. Monthly	Sell Price Ex Vat. 12 months
Lot 1 A	Azure Functions	Azure Functions is a serverless compute service that runs event-driven code without managing infrastructure. It supports multiple programming languages and triggers including HTTP requests, timers, queues, and database changes. The service automatically scales based on demand and charges only for execution time.	POA	POA
Lot 1 A	GitHub Advanced Security for Azure DevOps	GitHub Advanced Security for Azure DevOps provides code scanning, secret scanning, and dependency scanning within Azure DevOps repositories. It identifies security vulnerabilities in code and prevents accidental exposure of secrets. The service integrates with Azure DevOps pipelines and provides alerts in the repository interface.	POA	POA
Lot 1 A	Azure Cache for Redis	Azure Cache for Redis is a managed in-memory data store based on the Redis software. It provides low-latency and high-throughput data access for applications requiring fast caching, session storage, or message brokering. The service offers multiple tiers with different features and capacity options.	POA	POA
Lot 1 A	Azure CycleCloud	Azure CycleCloud is a tool for creating, managing, and optimising high-performance computing clusters in Azure. It supports various schedulers including Slurm, PBS Pro, and Grid Engine. The service automates cluster provisioning, autoscaling, and cost management.	POA	POA
Lot 1 A	Azure Quantum	Azure Quantum is a cloud service that provides access to quantum computing hardware and simulators from multiple providers. It includes optimisation solvers for complex problems and development tools for quantum algorithms. The service supports Q#, Qiskit, and Cirq programming languages.	POA	POA
Lot 1 A	Azure Spot Virtual Machines	Azure Spot Virtual Machines provide access to unused Azure compute capacity at significantly reduced prices. The VMs can be evicted when Azure needs the capacity back, with 30 seconds notice. They are suitable for fault-tolerant and flexible workloads that can handle interruptions.	POA	POA
Lot 1 A	Azure VMware Solution	Azure VMware Solution runs VMware workloads natively on Azure infrastructure. It provides VMware vSphere, vSAN, NSX-T, and optionally HCX for migration. The service enables organisations to extend or migrate on-premises VMware environments to Azure.	POA	POA
Lot 1 A	Azure Batch	Azure Batch is a managed service for running large-scale parallel and high-performance computing jobs. It manages compute resources, job scheduling, and automatic scaling for batch workloads. The service supports various applications including rendering, transcoding, and scientific simulations.	POA	POA
Lot 1 A	Azure Virtual Machines (Linux)	Azure Linux Virtual Machines provides on-demand scalable compute resources (CPU, GPU, Memory optimised, Data Science, etc.) running Linux operating systems. It supports various distributions including Ubuntu, Red Hat, SUSE, and Debian. Users have full control over the operating system and installed software.	POA	POA
Lot 1 A	Azure Arc-enabled SQL	Azure Arc-enabled SQL extends Azure management capabilities to SQL Server instances running anywhere. It provides Azure-based management, security, and governance for SQL Servers on-premises, in other clouds, or at the edge. The service requires installing Azure Arc agent on host machines.	POA	POA
Lot 1 A	Azure Virtual Machines (SQL Server)	SQL Server on Azure Virtual Machines provides full SQL Server instances running on Azure VMs with complete control over the database engine. It supports all SQL Server features and versions with infrastructure as a service flexibility. Users are responsible for managing the operating system, SQL Server configuration, and backups.	POA	POA
Lot 1 A	Azure Static Web Apps	Azure Static Web Apps is a service for hosting static web content with integrated serverless API backends. It automatically builds and deploys from GitHub or Azure DevOps repositories. The service provides global content distribution, SSL certificates, and authentication integration.	POA	POA
Lot 1 A	Azure Virtual Machine Scale Sets	Azure Virtual Machine Scale Sets enables deployment and management of a group of identical VMs with automatic scaling. It provides high availability by distributing VMs across fault and update domains. The service integrates with load balancers and supports both manual and automatic scaling.	POA	POA
Lot 1 A	Azure Virtual Machines	Azure Virtual Machines provides on-demand scalable compute resources in the cloud. Users have full control over the operating system, applications, and configurations with various VM sizes and types available (CPU, GPU, Memory optimised, Data Science, etc.). VMs can run Windows or Linux and support various workloads.	POA	POA

Lot	Service Name	Service Description	Sell Price Ex Vat. Monthly	Sell Price Ex Vat. 12 months
Lot 1 A	Azure Virtual Desktop	Azure Virtual Desktop is a desktop and application virtualisation service running in Azure. It provides Windows desktops and applications to users from any device with multi-session Windows support. The service handles infrastructure management while organisations control user access and policies.	POA	POA
Lot 1 A	Azure Virtual Machines (Windows)	Azure Windows Virtual Machines provides on-demand Windows Server and Windows client compute resources. Users have full control over the operating system with various VM sizes available (CPU, GPU, Memory optimised, Data Science, etc.). The service supports hybrid scenarios with Azure Arc and Windows Admin Center integration.	POA	POA
Lot 1 A	Azure Dedicated Host	Azure Dedicated Host provides physical servers dedicated to a single organisation for hosting VMs. It addresses compliance and regulatory requirements needing hardware isolation. Customers have control over maintenance timing and VM placement on dedicated hardware.	POA	POA
Lot 1 A	Azure VM Image Builder	Azure VM Image Builder is a managed service for creating custom virtual machine images. It automates the image building process including customisation and distribution. The service uses Packer technology and supports Windows and Linux images.	POA	POA
Lot 1 A	Azure Kubernetes Service (AKS)	Azure Kubernetes Service is a managed Kubernetes container orchestration service. It handles cluster provisioning, upgrades, monitoring, and scaling automatically. Users deploy containerised applications and define Kubernetes resources while Azure manages the control plane.	POA	POA
Lot 1 A	Azure Container Instances	Azure Container Instances provides serverless container hosting without managing virtual machines or orchestrators. It supports running containers on demand with per-second billing for fast startup scenarios. The service is suitable for simple applications, batch jobs, and task automation.	POA	POA
Lot 1 A	Azure Modelling and Simulation Workbench	Azure Modelling and Simulation Workbench provides a managed environment for engineering simulation and modelling workloads. It offers pre-configured high-performance computing resources for CAE applications. The service supports collaboration and data management for engineering teams.	POA	POA
Lot 1 A	Azure Kubernetes Fleet Manager	Azure Kubernetes Fleet Manager enables management of multiple AKS clusters as a single fleet. It provides centralised configuration, workload deployment, and update orchestration across clusters. The service supports multi-cluster scenarios including multi-region and multi-environment deployments.	POA	POA
Lot 1 A	Azure Red Hat OpenShift	Azure Red Hat OpenShift is a managed OpenShift container platform jointly operated by Microsoft and Red Hat. It provides enterprise Kubernetes with OpenShift developer tools and operational capabilities. The service includes integrated monitoring, logging, and security features.	POA	POA
Lot 1 A	Web App for Containers	Web App for Containers runs custom Docker containers on Azure App Service infrastructure. It combines the simplicity of App Service with container flexibility. The service handles infrastructure management while users provide container images.	POA	POA
Lot 1 A	Azure Container Storage	Azure Container Storage is a managed storage service optimised for stateful container workloads in AKS. It provides high-performance persistent volumes using Azure managed disks, ephemeral disks, or Azure Elastic SAN. The service integrates with Kubernetes CSI drivers.	POA	POA
Lot 1 A	Azure DevTest Labs	Azure DevTest Labs provides managed environments for development and testing scenarios. It enables self-service VM and environment provisioning with cost controls and policies. The service supports quotas, auto-shutdown, and custom images.	POA	POA
Lot 1 A	Azure Pipelines	Azure Pipelines is a CI/CD service for building, testing, and deploying applications to any platform. It supports containers, VMs, and cloud services with parallel job execution. The service integrates with various source control systems and deployment targets.	POA	POA
Lot 1 A	Azure SDKs	Azure SDKs provide libraries for building applications that interact with Azure services. They are available for multiple programming languages including .NET, Java, JavaScript, Python, and Go. The SDKs provide consistent patterns for authentication, error handling, and service interaction.	POA	POA
Lot 1 A	Visual Studio	Visual Studio is an integrated development environment for building applications across platforms. It provides debugging, testing, and deployment tools with Azure integration. The IDE supports multiple languages and frameworks with extensions.	POA	POA
Lot 1 A	Visual Studio Code	Visual Studio Code is a lightweight cross-platform code editor with Azure integration through extensions. It supports multiple programming languages with IntelliSense, debugging, and Git integration. The editor is extensible through a large marketplace.	POA	POA

Lot	Service Name	Service Description	Sell Price Ex Vat. Monthly	Sell Price Ex Vat. 12 months
Lot 1 A	Azure Deployment Environments	Azure Deployment Environments enables developers to self-service create infrastructure environments from pre-approved templates. It provides governance through environment definitions and policies while enabling developer autonomy. The service supports Azure Resource Manager and Terraform templates.	POA	POA
Lot 1 A	Azure Artifacts	Azure Artifacts is a package management service supporting NuGet, npm, Maven, Python, and Universal packages. It enables teams to share code through package feeds with versioning and access control. The service integrates with Azure Pipelines and other CI/CD tools.	POA	POA
Lot 1 A	Azure Boards	Azure Boards is a work tracking service providing Kanban boards, backlogs, and sprint planning. It supports Agile, Scrum, and CMMI process templates with customisable workflows. The service integrates with Azure Repos and GitHub for traceability.	POA	POA
Lot 1 A	Azure Monitor	Azure Monitor is a comprehensive monitoring service for collecting, analysing, and acting on telemetry from Azure and hybrid environments. It includes metrics, logs, alerts, and visualisation capabilities. The service supports application, infrastructure, and network monitoring.	POA	POA
Lot 1 A	Azure Repos	Azure Repos provides Git repositories and Team Foundation Version Control for source code management. It offers unlimited private repositories with branch policies and code review features. The service integrates with Azure Pipelines and Azure Boards.	POA	POA
Lot 1 A	Azure Test Plans	Azure Test Plans is a test management solution supporting manual and exploratory testing. It provides test case management, test execution tracking, and integration with Azure Boards. The service supports various testing scenarios including user acceptance testing.	POA	POA
Lot 1 A	DevOps tool integrations	Azure DevOps tool integrations enable connections with third-party development and operations tools. The service supports extensions for IDE integration, monitoring, and collaboration tools. Integrations extend Azure DevOps functionality through marketplace extensions.	POA	POA
Lot 1 A	Azure Managed Grafana	Azure Managed Grafana is a fully managed data visualisation service based on Grafana software. It integrates natively with Azure Monitor and other Azure data sources. The service provides dashboards for monitoring Azure and hybrid environments.	POA	POA
Lot 1 A	Azure Arc	Azure Arc extends Azure management capabilities to servers, Kubernetes clusters, and data services running outside Azure. It enables consistent management, governance, and security across hybrid and multi-cloud environments. The service requires installing Arc agents on target resources.	POA	POA
Lot 1 A	Azure ExpressRoute	Azure ExpressRoute provides private dedicated connections between on-premises networks and Azure. It offers higher bandwidth, lower latency, and more reliability than internet connections. The service requires coordination with a connectivity provider or direct connection.	POA	POA
Lot 1 A	Azure IoT Edge	Azure IoT Edge extends cloud intelligence to edge devices for local data processing. It runs containerised workloads including Azure services and custom code on edge devices. The service requires IoT Edge runtime installation on edge devices.	POA	POA
Lot 1 A	Microsoft Sentinel	Microsoft Sentinel is a cloud-native security information and event management (SIEM) and security orchestration, automation, and response (SOAR) solution. It provides intelligent security analytics and threat detection across the enterprise. The service requires data connectors and analytics rules configuration.	POA	POA
Lot 1 A	Azure Stack	Azure Stack is a portfolio of products that extend Azure services and capabilities to edge and disconnected environments. It includes Azure Stack Hub, Azure Stack HCI, and Azure Stack Edge with different capabilities. The products require on-premises hardware and management.	POA	POA
Lot 1 A	Microsoft Defender for Cloud	Microsoft Defender for Cloud is a cloud security posture management and workload protection platform. It provides security recommendations, threat protection, and compliance monitoring for Azure and hybrid environments. The service requires enabling Defender plans for workload protection.	POA	POA
Lot 1 A	Azure Local (formerly Azure Stack HCI)	Azure Local (formerly Azure Stack HCI) is a hyper-converged infrastructure solution that runs Azure services on-premises. It provides hybrid capabilities with Azure integration for management and services. The service requires certified hardware and Windows Server Datacenter licensing.	POA	POA
Lot 1 A	Azure Stack Hub	Azure Stack Hub is an integrated system that runs Azure services in disconnected or connected environments. It provides IaaS and PaaS capabilities consistent with Azure for on-premises deployment. The service requires purchasing integrated systems from hardware partners.	POA	POA

Lot	Service Name	Service Description	Sell Price Ex Vat. Monthly	Sell Price Ex Vat. 12 months
Lot 1 A	Azure Stack Edge	Azure Stack Edge is a managed edge computing device that brings Azure capabilities to remote locations. It provides compute, storage, and AI inference at the edge with cloud management. The service requires ordering devices from Microsoft.	POA	POA
Lot 1 A	Azure Modular Datacentre	Azure Modular Datacenter provides self-contained datacenter units for deployment in challenging environments. It delivers Azure capabilities to remote, harsh, or tactical locations. The service requires significant planning and infrastructure support.	POA	POA
Lot 1 A	Azure Kubernetes Service Edge Essentials	Azure Kubernetes Service Edge Essentials provides lightweight Kubernetes for edge devices and constrained environments. It enables container orchestration on Windows IoT Enterprise and Windows Server. The service requires compatible Windows-based devices.	POA	POA
Lot 1 A	Azure Operator Service Manager	Azure Operator Service Manager enables telecommunications operators to manage network functions. It provides lifecycle management for containerised and virtualised network functions. The service targets communication service providers and network operators.	POA	POA
Lot 1 A	Azure Operator Nexus	Azure Operator Nexus is a hybrid cloud platform designed for telecommunications operators. It provides infrastructure for running carrier-grade network functions with Azure management. The service requires specialised hardware and operator expertise.	POA	POA
Lot 1 A	Azure Programmable Connectivity	Azure Programmable Connectivity enables developers to access mobile network capabilities through APIs. It provides quality-of-service and network information APIs for application developers. The service requires partnerships with mobile network operators.	POA	POA
Lot 1 A	Microsoft Entra ID (formerly Azure AD)	Microsoft Entra ID is a cloud-based identity and access management service. It provides authentication, authorisation, and identity governance for users and applications. The service supports various authentication methods and integration scenarios.	POA	POA
Lot 1 A	Microsoft Entra Domain Services	Microsoft Entra Domain Services provides managed domain services compatible with Active Directory. It enables legacy applications to use domain join, LDAP, and Kerberos authentication in Azure. The service requires a Microsoft Entra ID tenant.	POA	POA
Lot 1 A	Microsoft Entra External ID	Microsoft Entra External ID provides identity management for customer-facing applications. It enables customised authentication experiences for consumers and business customers. The service supports social identity providers and custom branding.	POA	POA
Lot 1 A	Azure Health Data Services	Azure Health Data Services provides managed services for healthcare data storage and exchange. It supports FHIR, DICOM, and MedTech standards for interoperability. The service enables healthcare organisations to manage clinical and imaging data.	POA	POA
Lot 1 A	Azure Event Grid	Azure Event Grid is a fully managed event routing service that enables event-driven architectures. It provides reliable event delivery with filtering and batching capabilities. The service supports both Azure and custom event sources.	POA	POA
Lot 1 A	Azure Logic Apps	Azure Logic Apps is a cloud-based workflow automation service for integrating applications and data. It provides a visual designer and hundreds of pre-built connectors. The service supports both consumption-based and standard hosting models.	POA	POA
Lot 1 A	Azure Service Bus	Azure Service Bus is a fully managed enterprise message broker with queues and publish-subscribe topics. It provides reliable message delivery between applications and services. The service supports advanced features including sessions, transactions, and dead-lettering.	POA	POA
Lot 1 A	Azure Web PubSub	Azure Web PubSub is a managed service for building real-time web applications with WebSocket connections. It handles connection management, message routing, and scale automatically. The service supports various messaging patterns for real-time scenarios.	POA	POA
Lot 1 A	Microsoft Energy Data Services	Microsoft Energy Data Services is a data platform for the energy industry built on OSDU standards. It provides data management, analytics, and integration capabilities for oil and gas companies. The service supports subsurface and energy data workflows.	POA	POA
Lot 1 A	Microsoft Azure Data Manager for Agriculture (Preview)	Azure Data Manager for Agriculture provides a data platform for the agricultural industry. It aggregates data from various farm sources for analysis and insights. The service supports integration with farm management and precision agriculture systems.	POA	POA
Lot 1 A	Azure Digital Twins	Azure Digital Twins enables creation of digital representations of physical environments and assets. It provides a knowledge graph for modelling relationships between entities. The service supports IoT integration and simulation scenarios.	POA	POA

Lot	Service Name	Service Description	Sell Price Ex Vat. Monthly	Sell Price Ex Vat. 12 months
Lot 1 A	Azure IoT Hub	Azure IoT Hub is a managed service for bidirectional communication between IoT applications and devices. It provides device authentication, routing, and integration with Azure services. The service supports millions of simultaneous device connections.	POA	POA
Lot 1 A	Azure IoT Operations	Azure IoT Operations provides a modular platform for industrial IoT scenarios at the edge. It enables data collection, processing, and integration from industrial assets. The service runs on Arc-enabled Kubernetes clusters.	POA	POA
Lot 1 A	Azure Maps	Azure Maps provides geospatial APIs and SDKs for adding maps and location intelligence to applications. It includes mapping, routing, search, and traffic services. The service supports web and mobile application development.	POA	POA
Lot 1 A	Azure Sphere	Azure Sphere is a secured IoT platform combining hardware, operating system, and cloud services. It provides defence-in-depth security for connected devices. The service requires Azure Sphere certified hardware.	POA	POA
Lot 1 A	Azure Notification Hubs	Azure Notification Hubs is a scalable push notification service for mobile and web applications. It provides cross-platform push notification delivery to millions of devices. The service integrates with platform notification services.	POA	POA
Lot 1 A	Windows for IoT	Windows for IoT provides Windows operating systems for embedded and IoT device scenarios. It includes Windows IoT Enterprise and Windows Server IoT editions. The products support fixed-function devices and edge computing.	POA	POA
Lot 1 A	Azure Copilot	Microsoft Copilot for Azure is an AI assistant that helps manage Azure resources through natural language. It provides guidance, generates code, and assists with troubleshooting. The service integrates with Azure portal and documentation.	POA	POA
Lot 1 A	Azure Automation	Azure Automation provides process automation, configuration management, and update management services. It enables running PowerShell and Python runbooks for operational tasks. The service supports hybrid scenarios through hybrid runbook workers.	POA	POA
Lot 1 A	Azure Advisor	Azure Advisor is a personalised recommendation service that optimises Azure deployments. It provides best practice recommendations for cost, security, reliability, performance, and operational excellence. The service analyses resource configuration and usage patterns.	POA	POA
Lot 1 A	Defender External Attack Surface Management	Microsoft Defender External Attack Surface Management discovers and monitors internet-facing assets. It identifies shadow IT and unknown exposures across the organisation. The service continuously scans for vulnerabilities and misconfigurations.	POA	POA
Lot 1 A	Azure Backup	Azure Backup provides cloud-based backup for Azure VMs, on-premises servers, and workloads. It offers application-consistent backups with flexible retention policies. The service supports various workloads including SQL Server, SAP HANA, and file shares.	POA	POA
Lot 1 A	Azure Lighthouse	Azure Lighthouse enables service providers to manage customer Azure resources at scale. It provides cross-tenant management with role-based access control. The service supports delegated resource management for managed services.	POA	POA
Lot 1 A	Azure Managed Applications	Azure Managed Applications enables publishing solutions that customers deploy and operate in their subscriptions. Publishers maintain control over application management while customers own infrastructure. The service supports marketplace and service catalog scenarios.	POA	POA
Lot 1 A	Azure Migrate	Azure Migrate provides tools for discovering, assessing, and migrating on-premises resources to Azure. It supports server, database, and application migration scenarios. The service includes partner tool integrations.	POA	POA
Lot 1 A	Azure mobile app	The Azure mobile app provides mobile access to Azure resources for monitoring and management. It supports resource viewing, alert management, and Cloud Shell access. The app is available for iOS and Android devices.	POA	POA
Lot 1 A	Azure Policy	Azure Policy enforces organisational standards and compliance for Azure resources. It provides built-in and custom policy definitions. The service enables governance at scale.	POA	POA
Lot 1 A	Azure Resource Manager	Azure Resource Manager is the deployment and management service for Azure. It provides a management layer for creating, updating, and deleting resources in Azure subscriptions. The service enables infrastructure as code through templates.	POA	POA
Lot 1 A	Azure Resource Manager templates	ARM templates are JSON files that define infrastructure and configuration for Azure deployments. They enable declarative deployment of Azure resources with dependencies and parameters. Templates support modular and reusable infrastructure definitions.	POA	POA

Lot	Service Name	Service Description	Sell Price Ex Vat. Monthly	Sell Price Ex Vat. 12 months
Lot 1 A	Azure Service Health	Azure Service Health provides personalised alerts and guidance when Azure service issues affect resources. It shows planned maintenance, health advisories, and service incidents. The service provides health history and root cause analysis.	POA	POA
Lot 1 A	Azure Site Recovery	Azure Site Recovery is a disaster recovery service that orchestrates replication, failover, and recovery of workloads. It supports Azure VMs, on-premises VMs, and physical servers. The service provides continuous replication and automated recovery.	POA	POA
Lot 1 A	Azure Cloud Shell	Azure Cloud Shell is a browser-based command-line experience for managing Azure resources. It provides pre-authenticated access with pre-installed tools including Azure CLI and PowerShell. The service requires an Azure Storage account for persistence.	POA	POA
Lot 1 A	Microsoft Cost Management	Microsoft Cost Management provides cost analysis, budgets, and optimisation recommendations for Azure spending. It enables organisations to monitor and control cloud costs. The service integrates with Azure Advisor for cost recommendations.	POA	POA
Lot 1 A	Microsoft Azure portal	The Azure portal is a web-based console for managing Azure resources and services. It provides a graphical interface for creating, configuring, and monitoring resources. The portal supports customisation through dashboards and favourites.	POA	POA
Lot 1 A	Azure Network Watcher	Azure Network Watcher provides network monitoring and diagnostic tools for Azure networks. It enables traffic analysis, connection troubleshooting, and packet capture. The service supports both Azure and hybrid network scenarios.	POA	POA
Lot 1 A	Azure Traffic Manager	Azure Traffic Manager is a DNS-based traffic load balancer that distributes traffic across global endpoints. It provides various routing methods including performance, priority, and geographic. The service operates at the DNS level without handling actual traffic.	POA	POA
Lot 1 A	Azure Automanage	Azure Automanage automates best practice configuration for Azure VMs. It applies consistent settings for backup, monitoring, security, and updates. The service reduces operational overhead through automation.	POA	POA
Lot 1 A	Azure Resource Mover	Azure Resource Mover simplifies moving resources between Azure regions. It validates dependencies and orchestrates the move process. The service supports various resource types. Users must initiate moves and resolve issues.	POA	POA
Lot 1 A	Update management center	Update Management Center provides centralised update management for Azure and hybrid machines. It assesses update compliance and schedules update deployments. The service supports Windows and Linux operating systems.	POA	POA
Lot 1 A	Azure Front Door CDN	Azure Front Door is a global application delivery network providing CDN, acceleration, and load balancing. It offers DDoS protection, WAF integration, and SSL termination at edge locations. The service optimises application performance globally.	POA	POA
Lot 1 A	Azure Data Box	Azure Data Box provides offline data transfer devices for moving large amounts of data to Azure. It includes various device options for different data volumes. The service addresses scenarios where network transfer is impractical.	POA	POA
Lot 1 A	Azure Spatial Anchors	Azure Spatial Anchors enables building mixed reality applications with persistent spatial anchors. It provides cross-platform support for creating shared AR experiences. The service stores anchor data in Azure for multi-user scenarios.	POA	POA
Lot 1 A	Azure Communication Services	Azure Communication Services provides communication APIs for voice, video, chat, and SMS. It enables adding communication features to applications without telecom expertise. The service supports integration with Microsoft Teams.	POA	POA
Lot 1 A	Azure Operator 5G Core - Preview	Azure Operator 5G Core provides mobile network core functions for telecommunications operators. It enables running 5G core workloads on Azure infrastructure. The service targets communication service providers deploying 5G networks. Users must be telecommunications operators with 5G requirements.	POA	POA
Lot 1 A	Azure Application Gateway	Azure Application Gateway is a web traffic load balancer for managing HTTP and HTTPS traffic to web applications. It provides layer 7 routing, SSL termination, and WAF capabilities. The service supports various routing methods and autoscaling.	POA	POA

Lot	Service Name	Service Description	Sell Price Ex Vat. Monthly	Sell Price Ex Vat. 12 months
Lot 1 A	Azure Application Gateway for Containers	Azure Application Gateway for Containers is a layer 7 load balancing and dynamic traffic management service for workloads running in Kubernetes clusters. It is the evolution of the Application Gateway Ingress Controller and extends Azure's Application Load Balancing portfolio under the Application Gateway product family. The service comprises a data plane managed outside the AKS cluster and a control plane using an ALB Controller component that runs inside the cluster. It supports both Kubernetes Ingress and Gateway API specifications. The service requires Azure CNI or CNI Overlay networking and does not support Kubenet. Application Gateway for Containers uses a /24 subnet for deployment with only one deployment supported per subnet. It can run in FIPS 140-2 approved mode when required.	POA	POA
Lot 1 A	Azure Bastion	Azure Bastion provides secure RDP and SSH access to VMs without exposing public IP addresses. It operates as a managed PaaS service within the virtual network. The service eliminates need for jump boxes or VPN for VM access.	POA	POA
Lot 1 A	Azure DDoS Protection	Azure DDoS Protection provides defence against distributed denial of service attacks. It offers always-on traffic monitoring and automatic attack mitigation. The service includes DDoS Protection Basic and DDoS Protection standard tiers.	POA	POA
Lot 1 A	Azure DNS	Azure DNS provides DNS hosting using Microsoft Azure infrastructure. It supports both public and private DNS zones with high availability. The service integrates with other Azure services for automatic DNS management.	POA	POA
Lot 1 A	Azure DNS Private Resolver	Azure DNS Private Resolver is a fully managed service that enables DNS resolution between Azure virtual networks and on-premises environments without deploying VM-based DNS servers. It bridges on-premises DNS with Azure DNS private zones, allowing queries to flow bidirectionally across hybrid networks. The service requires an Azure Virtual Network and uses inbound endpoints to receive DNS queries and outbound endpoints with DNS forwarding rulesets to send queries to other DNS servers. Hybrid connectivity requires Azure ExpressRoute or VPN Gateway. DNS Private Resolver is availability zone aware and provides built-in high availability. The service requires a dedicated subnet with an address space between /28 and /24, with /26 recommended for most deployments. Customer data remains within the region where the resolver is deployed.	POA	POA
Lot 1 A	Azure Firewall	Azure Firewall is a managed cloud-based network security service. It provides stateful firewall capabilities with high availability and scalability. The service supports application and network rules with threat intelligence filtering.	POA	POA
Lot 1 A	Azure Orbital Ground Station	Azure Orbital Ground Station provides satellite connectivity as a service. It enables communication with spacecraft using Microsoft-managed ground stations. The service supports various satellite configurations and missions.	POA	POA
Lot 1 A	Azure Route Server	Azure Route Server simplifies dynamic routing between network virtual appliances and Azure. It enables BGP peering without managing route tables manually. The service supports hub-and-spoke and transit network designs.	POA	POA
Lot 1 A	Azure Private 5G Core	Azure Private 5G Core provides private mobile network capabilities for enterprise deployments. It enables organisations to deploy private LTE and 5G networks. The service runs on Azure Stack Edge devices.	POA	POA
Lot 1 A	Azure Communications Gateway	Azure Communications Gateway connects operator voice networks to Microsoft Teams Phone. It provides certified connectivity for Teams calling services. The service targets telecommunications operators offering Teams integration.	POA	POA
Lot 1 A	Azure Front Door	Azure Front Door is a global load balancer and CDN that provides application acceleration and protection. It offers SSL offloading, WAF, and DDoS protection at global edge locations. The service optimises application delivery worldwide.	POA	POA
Lot 1 A	Azure Network Function Manager	Azure Network Function Manager orchestrates network function deployments on Azure Stack Edge. It enables deploying virtualized network functions at edge locations. The service supports SD-WAN, firewall, and router deployments.	POA	POA
Lot 1 A	Azure Virtual Network Manager	Azure Virtual Network Manager provides centralised network management across subscriptions and regions. It enables network group creation, connectivity configuration, and security admin rules. The service simplifies complex virtual network management.	POA	POA

Lot	Service Name	Service Description	Sell Price Ex Vat. Monthly	Sell Price Ex Vat. 12 months
Lot 1 A	Azure NAT Gateway	Azure NAT Gateway provides outbound internet connectivity for virtual network resources. It offers static public IP addresses for outbound connections. The service provides high availability without zone configuration.	POA	POA
Lot 1 A	Azure Private Link	Azure Private Link enables private connectivity to Azure services over private endpoints. It brings Azure services into virtual networks without internet exposure. The service supports both Microsoft and partner services.	POA	POA
Lot 1 A	Azure Firewall Manager	Azure Firewall Manager provides centralised security policy and route management for Azure Firewall. It enables managing multiple firewalls across virtual networks and vWAN hubs. The service supports firewall policies and secured virtual hubs.	POA	POA
Lot 1 A	Azure Load Balancer	Azure Load Balancer distributes inbound traffic across backend resources. It provides layer 4 load balancing for TCP and UDP traffic. The service offers both internal and public load balancer options.	POA	POA
Lot 1 A	Azure Virtual Network	Azure Virtual Network is the fundamental networking building block in Azure. It enables Azure resources to communicate securely with each other, the internet, and on-premises networks. VNets provide isolation, segmentation, and traffic filtering.	POA	POA
Lot 1 A	Azure Virtual WAN	Azure Virtual WAN provides networking, security, and routing functions in a unified hub. It connects branches, VPNs, ExpressRoute, and Azure virtual networks. The service simplifies large-scale network architecture.	POA	POA
Lot 1 A	Azure VPN Gateway	Azure VPN Gateway enables secure connectivity between Azure virtual networks and on-premises networks. It supports site-to-site, point-to-site, and VNet-to-VNet VPN connections. The service uses IPsec and IKE protocols.	POA	POA
Lot 1 A	Azure Web Application Firewall	Azure Web Application Firewall protects web applications from common exploits and vulnerabilities. It provides OWASP core rule set protection and custom rules. The service integrates with Application Gateway and Front Door.	POA	POA
Lot 1 A	Azure Dedicated HSM	Azure Dedicated HSM provides dedicated hardware security modules for cryptographic operations. It offers FIPS 140-2 Level 3 validated HSMs for key management. The service provides single-tenant HSM access.	POA	POA
Lot 1 A	Azure Information Protection	Azure Information Protection enables classifying and protecting documents and emails with labels. It provides data discovery, classification, and encryption capabilities. The service integrates with Microsoft 365 applications.	POA	POA
Lot 1 A	Azure Key Vault	Azure Key Vault provides secure storage for secrets, keys, and certificates. It enables centralised key management with access policies and logging. The service supports hardware security module backed keys.	POA	POA
Lot 1 A	Azure Attestation	Azure Attestation is a remote attestation service for verifying trustworthiness of platforms and binaries. It validates TEE environments including SGX enclaves and TPM-based systems. The service provides attestation policies and evidence evaluation.	POA	POA
Lot 1 A	Azure Archive Storage	Azure Archive Storage provides lowest-cost tier for rarely accessed data. It stores data offline with retrieval latency. The tier suits long-term retention and compliance.	POA	POA
Lot 1 A	Azure Files	Azure Files provides fully managed file shares in the cloud. It supports SMB and NFS protocols for connecting from any location. The service enables replacing or supplementing on-premises file servers.	POA	POA
Lot 1 A	Azure NetApp Files	Azure NetApp Files provides enterprise-grade NAS storage with NetApp technology. It supports NFS, SMB, and dual-protocol access. The service delivers high performance for demanding workloads.	POA	POA
Lot 1 A	Azure Blob Storage	Azure Blob Storage provides object storage for unstructured data in the cloud. It supports storing large amounts of text, binary data, images, and documents. The service offers hot, cool, cold, and archive access tiers.	POA	POA
Lot 1 A	Azure Disk Storage	Azure Disk Storage provides block-level storage volumes for Azure VMs. It offers standard HDD, standard SSD, premium SSD, and ultra disk options. Managed disks handle storage account management automatically.	POA	POA
Lot 1 A	Azure Elastic SAN	Azure Elastic SAN provides a cloud-native SAN solution for Azure workloads. It offers block storage with scalable performance and capacity. The service simplifies SAN management with Azure integration.	POA	POA
Lot 1 A	Azure Queue Storage	Azure Queue Storage provides message queuing for large workloads. It enables asynchronous communication between application components. The service supports millions of messages per queue.	POA	POA
Lot 1 A	Azure Storage Explorer	Azure Storage Explorer is a standalone application for managing Azure Storage data. It supports blobs, files, queues, and tables across multiple accounts. The application runs on Windows, macOS, and Linux.	POA	POA

Lot	Service Name	Service Description	Sell Price Ex Vat. Monthly	Sell Price Ex Vat. 12 months
Lot 1 A	Azure Managed Lustre	Azure Managed Lustre provides high-performance parallel file system for HPC workloads. It delivers high throughput and IOPS for compute-intensive applications. The service integrates with Azure Blob Storage for data tiering.	POA	POA
Lot 1 A	Microsoft Dev Box	Microsoft Dev Box provides self-service developer workstations in the cloud. It enables developers to create ready-to-code environments on demand. The service integrates with developer tools and processes.	POA	POA
Lot 1 A	Azure Relay	Azure Relay is a service that enables secure exposure of services running within corporate networks to the public cloud without opening firewall ports or making changes to network infrastructure. It establishes bi-directional communication between on-premises services and cloud applications through outbound connections. The service provides two main capabilities: Hybrid Connections using open-standard WebSockets and HTTP protocols, and WCF Relay for Windows Communication Foundation remote procedure calls. Hybrid Connections supports any platform and programming language, while WCF Relay is a legacy offering for existing WCF implementations. The service uses TLS 1.2 for security and shared access signature keys for authentication. Azure Relay requires a namespace to be created before use and is scoped to single application endpoints rather than entire networks.	POA	POA
Lot 1 A	Azure SignalR Service	Azure SignalR Service provides real-time messaging for web applications. It manages WebSocket connections at scale for real-time scenarios. The service supports ASP.NET and Azure Functions integration.	POA	POA
Lot 1 A	Azure Fluid Relay	Azure Fluid Relay provides backend service for Fluid Framework applications. It enables real-time collaborative experiences in web applications. The service handles data synchronisation and conflict resolution.	POA	POA
Lot 1 A	Copilot for Security	Microsoft Copilot for Security is an AI-powered security assistant. It helps security teams with incident investigation, threat hunting, and response. The service integrates with Microsoft security products.	POA	POA
Lot 1 A	Microsoft Entra Internet Access	Microsoft Entra Internet Access provides identity-centric secure web gateway. It protects access to internet and SaaS applications. The service integrates with Microsoft Entra conditional access.	POA	POA
Lot 1 A	Microsoft Entra Private Access	Microsoft Entra Private Access provides zero-trust access to private applications. It replaces VPN for accessing internal resources. The service uses identity-centric access policies.	POA	POA
Lot 1 A	Azure Analysis Services	Azure Analysis Services provides enterprise-grade semantic modelling for BI analytics. It enables building tabular models for data analysis. The service supports DirectQuery and in-memory processing.	POA	POA
Lot 1 A	Azure AI Services	Azure AI Services provides pre-built AI capabilities through APIs and SDKs. It includes vision, speech, language, and decision services. The service enables adding AI to applications without ML expertise.	POA	POA
Lot 1 A	Azure AI Bot Service	Azure AI Bot Service provides platform for building conversational AI bots. It supports multiple channels including Teams, web, and messaging platforms. The service integrates with Azure AI services.	POA	POA
Lot 1 A	Azure AI Search	Azure AI Search is a cloud search service with AI enrichment capabilities. It provides full-text search, faceting, and filtering for applications. The service supports AI enrichment through skillsets.	POA	POA
Lot 1 A	Azure Cosmos DB	Azure Cosmos DB is a globally distributed multi-model database service. It provides single-digit millisecond latency and multiple consistency levels. The service supports SQL, MongoDB, Cassandra, and other APIs.	POA	POA
Lot 1 A	Microsoft Purview Data Catalog	Microsoft Purview Data Catalog provides unified data governance across enterprise data estates. It enables data discovery, classification, and lineage tracking. The service scans data sources and maps relationships.	POA	POA
Lot 1 A	Azure Data Explorer	Azure Data Explorer is a fast analytics service for time-series and log data. It provides real-time analysis using Kusto Query Language. The service handles streaming ingestion and large-scale queries.	POA	POA
Lot 1 A	Azure Data Factory	Azure Data Factory provides cloud-based data integration service. It enables creating data-driven workflows for data movement and transformation. The service supports hybrid data scenarios.	POA	POA
Lot 1 A	Azure Data Lake Storage	Azure Data Lake Storage Gen2 provides hierarchical namespace storage for big data analytics. It combines Azure Blob Storage with analytics-optimised features. The service supports HDFS-compatible access.	POA	POA
Lot 1 A	Azure Data Share	Azure Data Share enables organisations to share data with external partners. It provides snapshot-based and in-place sharing options. The service supports various Azure data services.	POA	POA
Lot 1 A	Azure Database for MySQL	Azure Database for MySQL provides managed MySQL database service. It offers flexible server deployment with high availability and scaling options. The service handles patching, backups, and monitoring automatically.	POA	POA

Lot	Service Name	Service Description	Sell Price Ex Vat. Monthly	Sell Price Ex Vat. 12 months
Lot 1 A	Azure Database for PostgreSQL	Azure Database for PostgreSQL provides managed PostgreSQL database service. It offers flexible server and Cosmos DB for PostgreSQL options. The service provides high availability and intelligent performance.	POA	POA
Lot 1 A	Azure Database Migration Service	Azure Database Migration Service enables migrating databases to Azure with minimal downtime. It supports various source databases including SQL Server, MySQL, and PostgreSQL. The service provides assessment and migration tools.	POA	POA
Lot 1 A	Azure Databricks	Azure Databricks provides Apache Spark-based analytics platform. It enables big data analytics and machine learning workloads. The service integrates with Azure services and security.	POA	POA
Lot 1 A	Azure Machine Learning	Azure Machine Learning provides cloud platform for building and deploying ML models. It supports the complete machine learning lifecycle from training to deployment. The service offers automated ML and responsible AI tools.	POA	POA
Lot 1 A	Azure Managed Instance for Apache Cassandra	Azure Managed Instance for Apache Cassandra provides managed Cassandra service. It enables running Cassandra workloads with Azure integration. The service handles infrastructure management and patching.	POA	POA
Lot 1 A	Power BI Embedded Analytics	Power BI Embedded enables embedding Power BI analytics in applications. It provides programmatic access to reports and dashboards. The service supports ISV and enterprise embedding scenarios.	POA	POA
Lot 1 A	Azure SQL Databases	Azure SQL is a family of managed SQL database services. It includes Azure SQL Database, SQL Managed Instance, and SQL Server on VMs. The services provide different levels of management and compatibility.	POA	POA
Lot 1 A	Azure SQL Database	Azure SQL Database is a managed relational database service. It provides intelligent query processing and automatic tuning. The service offers serverless and provisioned compute options.	POA	POA
Lot 1 A	Azure Stream Analytics	Azure Stream Analytics provides real-time analytics service for streaming data. It enables SQL-like queries on data streams. The service supports IoT and event processing scenarios.	POA	POA
Lot 1 A	Azure Synapse Analytics	Azure Synapse Analytics provides unified analytics platform combining data warehousing and big data. It enables enterprise analytics with integrated Apache Spark and SQL pools. The service provides serverless and dedicated options.	POA	POA
Lot 1 A	Microsoft Fabric	Microsoft Fabric provides unified analytics platform with SaaS experience. It combines data engineering, science, warehousing, and BI in one platform. The service uses OneLake for unified storage.	POA	POA
Lot 1 A	Azure OpenAI Service	Azure OpenAI Service provides access to OpenAI models including GPT-5 and DALL-E. It offers enterprise features with Azure security and compliance. The service requires approved access and responsible AI compliance.	POA	POA
Lot 1 A	Azure HDInsight	Azure HDInsight provides managed open-source analytics clusters. It supports Hadoop, Spark, Kafka, and other frameworks. The service handles cluster provisioning and management.	POA	POA
Lot 1 A	Microsoft Graph Data Connect	Microsoft Graph Data Connect enables bulk access to Microsoft 365 data for analytics. It provides data extraction to Azure storage with privacy controls. The service supports approved data pipelines.	POA	POA
Lot 1 A	Oracle Database @Azure	Oracle Database @Azure provides Oracle database services on Azure infrastructure. It enables running Oracle workloads with Azure integration. The service is jointly managed by Oracle and Microsoft.	POA	POA
Lot 1 A	Azure Event Hubs	Azure Event Hubs provides big data streaming platform and event ingestion service. It can receive and process millions of events per second. The service supports Kafka protocol compatibility.	POA	POA
Lot 1 A	Azure SQL Managed Instance	Azure SQL Managed Instance provides managed SQL Server with full instance-level features. It offers near 100% SQL Server compatibility for lift-and-shift scenarios. The service handles patching, backups, and high availability.	POA	POA
Lot 1 A	Azure Open Datasets	Azure Open Datasets provides curated public datasets for machine learning. It includes weather, census, demographics, and other data sources. The service simplifies data access for analytics and ML.	POA	POA
Lot 1 A	Azure AI Video Indexer	Azure AI Video Indexer provides video and audio analysis using AI. It extracts insights including faces, speech, and objects from media. The service supports content moderation and search.	POA	POA
Lot 1 A	Azure AI Custom Vision	Azure AI Custom Vision enables building custom image classification and object detection models. It provides no-code model training with limited training data. The service supports edge deployment options.	POA	POA
Lot 1 A	Data Science Virtual Machines	Data Science Virtual Machines provide pre-configured VMs for data science workloads (CPU, GPU, Memory optimised, Data Science, etc.). They include popular tools, frameworks, and drivers. The service supports Windows and Linux.	POA	POA

Lot	Service Name	Service Description	Sell Price Ex Vat. Monthly	Sell Price Ex Vat. 12 months
Lot 1 A	Azure AI Immersive Reader	Azure AI Immersive Reader provides reading comprehension tools for applications. It supports text-to-speech, translation, and focus modes. The service helps users with reading difficulties.	POA	POA
Lot 1 A	Conversational Language Understanding (CLU)	Conversational Language Understanding enables building custom natural language understanding models. It extracts intents and entities from user utterances. The service integrates with Azure AI Language.	POA	POA
Lot 1 A	Custom Question Answering (Azure AI Language)	Custom Question Answering enables building FAQ and QnA bots from content. It extracts question-answer pairs from documents and URLs. The service provides natural language query capabilities.	POA	POA
Lot 1 A	Speaker recognition	Azure AI Speech speaker recognition identifies and verifies speakers in audio. It provides speaker identification and verification capabilities. The service requires voice enrollment for speakers. Users must enroll speakers and verify or identify.	POA	POA
Lot 1 A	Azure AI Speech to text	Azure AI Speech speech-to-text converts audio to text in real-time or batch. It supports multiple languages and custom models. The service provides transcription and captioning capabilities.	POA	POA
Lot 1 A	Azure AI Speech translation	Azure AI Speech translation provides real-time speech-to-speech translation. It converts spoken language to translated text or speech. The service supports multiple language pairs.	POA	POA
Lot 1 A	Azure AI Language	Azure AI Language provides natural language processing capabilities. It includes sentiment analysis, key phrase extraction, and entity recognition. The service offers both pre-built and custom models.	POA	POA
Lot 1 A	Azure AI Text to speech	Azure AI Speech text-to-speech converts text to natural-sounding speech. It supports neural voices and custom voice creation. The service provides SSML control and audio customisation.	POA	POA
Lot 1 A	Azure AI Translator	Azure AI Translator provides machine translation for text and documents. It supports over 100 languages with neural translation. The service enables custom translator models.	POA	POA
Lot 1 A	Azure AI Content Safety	Azure AI Content Safety detects harmful content in text and images. It provides moderation for various harm categories. The service enables content filtering in applications.	POA	POA
Lot 1 A	Microsoft Health Bot	Microsoft Health Bot provides healthcare virtual agent platform. It enables building healthcare chatbots with medical intelligence. The service includes clinical protocols and triage.	POA	POA
Lot 1 A	Azure AI Document Intelligence	Azure AI Document Intelligence extracts information from documents. It provides pre-built models for invoices, receipts, and forms. The service enables custom model training.	POA	POA
Lot 1 A	Azure Operator Call Protection	Azure Operator Call Protection provides AI-powered call screening for voice networks. It detects and blocks scam calls. The service targets telecommunications operators.	POA	POA
Lot 1 A	Microsoft Purview	Microsoft Purview provides unified data governance and compliance platform. It combines data catalog, governance, and compliance capabilities. The service enables organisation-wide data management.	POA	POA
Lot 1 A	Azure Chaos Studio	Azure Chaos Studio provides chaos engineering experiments for Azure resources. It enables testing application resilience through controlled faults. The service supports various fault types.	POA	POA
Lot 1 A	Azure Operator Insights	Azure Operator Insights provides analytics for telecommunications networks. It enables operators to analyse network data for optimisation. The service targets communication service providers.	POA	POA
Lot 1 A	Azure Service Fabric	Azure Service Fabric is a distributed systems platform for microservices. It provides container orchestration and stateful service support. The service handles deployment, scaling, and updates.	POA	POA
Lot 1 A	Azure Table Storage	Azure Table Storage provides NoSQL key-value store for structured data. It offers flexible schema with fast access. The service supports large-scale structured data storage.	POA	POA
Lot 1 A	Azure confidential ledger	Azure Confidential Ledger provides tamper-proof data storage using confidential computing. It ensures data integrity through hardware-backed security. The service supports regulatory and audit scenarios.	POA	POA
Lot 1 A	Microsoft Foundry (Formerly AI Foundry)	Microsoft AI Foundry provides unified platform for building AI applications. It combines model catalog, development tools, and deployment capabilities. The service supports enterprise AI development.	POA	POA
Lot 1 A	Foundry Agent Service	Foundry Agent Service enables building AI agents that use tools and data. It provides agent orchestration and tool integration capabilities. The service supports building autonomous AI applications.	POA	POA
Lot 1 A	Foundry Models	Foundry Models provides access to various AI models through unified platform. It includes models from Microsoft, OpenAI, and partners. The service enables model comparison and deployment.	POA	POA

Lot	Service Name	Service Description	Sell Price Ex Vat. Monthly	Sell Price Ex Vat. 12 months
Lot 1 A	Foundry Tools	Foundry Tools provides development tools for AI applications. It includes prompt flow, evaluation, and deployment capabilities. The service supports the AI development lifecycle.	POA	POA
Lot 1 A	Azure Managed Redis	Azure Managed Redis provides managed Redis Enterprise service. It offers higher performance and additional modules compared to Azure Cache for Redis. The service supports enterprise Redis features.	POA	POA
Lot 1 A	Azure Container Apps	Azure Container Apps provides serverless container platform for microservices. It handles scaling, load balancing, and certificate management automatically. The service abstracts Kubernetes complexity.	POA	POA
Lot 1 A	Azure Cloud HSM	Azure Cloud HSM provides managed hardware security modules for cryptographic operations. It offers FIPS 140-2 Level 3 compliance. The service enables cloud-based key management.	POA	POA
Lot 1 A	Azure Compute Fleet	Azure Compute Fleet enables provisioning multiple VM types and sizes efficiently. It optimises for price, capacity, or both across VM options. The service supports large-scale compute scenarios. Users must configure VM specifications and allocation strategies.	POA	POA
Lot 1 A	Azure Storage Mover	Azure Storage Mover provides managed migration service for file data to Azure. It automates large-scale migration from on-premises storage. The service handles agent deployment and job management.	POA	POA
Lot 1 A	Trusted Signing	Trusted Signing provides managed code signing service for applications. It enables signing without managing certificates. The service provides timestamping and certificate management.	POA	POA
Lot 1 A	GitHub Copilot	GitHub Copilot provides AI-powered code suggestions in development environments. It assists with code completion, documentation, and explanation. The service integrates with various IDEs.	POA	POA
Lot 1 A	GitHub Enterprise	GitHub Enterprise provides self-hosted GitHub platform for organisations. It offers source control, collaboration, and security features. The service supports on-premises and cloud deployment.	POA	POA
Lot 1 A	Azure SRE Agent (Preview)	Azure SRE Agent provides AI-powered assistance for site reliability engineering tasks. It helps with incident investigation and remediation. The service integrates with Azure monitoring tools.	POA	POA
Lot 1 A	Azure App Testing	Azure App Testing provides automated testing service for web and mobile applications. It enables functional and compatibility testing across devices. The service supports various testing frameworks.	POA	POA
Lot 1 A	Azure HorizonDB (Preview)	Azure HorizonDB provides distributed relational database service. It offers horizontal scaling with relational database capabilities. The service is currently in preview.	POA	POA
Lot 1 A	Microsoft Playwright Testing	Microsoft Playwright Testing provides cloud-hosted browser testing infrastructure. It enables running Playwright tests at scale. The service supports cross-browser testing.	POA	POA
Lot 1 A	Azure Storage Discovery	Azure Storage Discovery identifies sensitive data in storage accounts. It provides classification and security assessment capabilities. The service integrates with Microsoft Purview.	POA	POA
Lot 1 A	Azure Video Indexer	Azure Video Indexer extracts insights from video and audio content. It provides transcription, face detection, and content analysis. The service supports media analytics scenarios.	POA	POA
Lot 1 A	Azure Template Specs	Azure Template Specs enables storing and sharing ARM templates as resources. It provides versioning and access control for templates. The service simplifies template distribution.	POA	POA
Lot 1 A	Deployment Stacks	Azure Deployment Stacks provides managed deployment resources that track deployed infrastructure. It enables atomic deployments with deny settings. The service simplifies resource lifecycle management.	POA	POA
Lot 1 A	Defender for Servers Plan 1	Microsoft Defender for Servers Plan 1 provides foundational server protection capabilities. It includes vulnerability assessment and Microsoft Defender for Endpoint. The service requires Defender for Cloud.	POA	POA
Lot 1 A	Defender for Servers Plan 2	Microsoft Defender for Servers Plan 2 provides comprehensive server protection. It includes all Plan 1 features plus file integrity monitoring and more. The service offers advanced threat protection.	POA	POA
Lot 1 A	Defender for App Service	Microsoft Defender for App Service protects web applications hosted on App Service. It detects attacks and suspicious activities. The service provides security recommendations.	POA	POA
Lot 1 A	Defender for Databases	Microsoft Defender for Databases protects Azure database services. It provides threat protection for SQL, MySQL, PostgreSQL, and Cosmos DB. The service detects anomalous activities.	POA	POA
Lot 1 A	Defender for Storage	Microsoft Defender for Storage protects Azure Storage accounts from threats. It detects suspicious access patterns and malware. The service provides activity monitoring.	POA	POA

Lot	Service Name	Service Description	Sell Price Ex Vat. Monthly	Sell Price Ex Vat. 12 months
Lot 1 A	Defender for Containers	Microsoft Defender for Containers protects container environments including AKS. It provides vulnerability scanning and runtime protection. The service supports Kubernetes security.	POA	POA
Lot 1 A	Defender for AI Services	Microsoft Defender for AI Services provides threat protection for Azure AI services. It detects suspicious activities and jailbreak attempts. The service monitors AI service usage.	POA	POA
Lot 1 A	Defender for Key Vault	Microsoft Defender for Key Vault protects key vaults from suspicious access. It detects unusual access patterns and potential threats. The service provides security intelligence.	POA	POA
Lot 1 A	Defender for Resource Manager	Microsoft Defender for Resource Manager protects Azure management layer. It detects suspicious management operations and exploitation attempts. The service monitors ARM operations.	POA	POA
Lot 1 A	Defender for API's	Microsoft Defender for APIs protects API Management instances. It discovers APIs and detects security risks. The service provides API security recommendations.	POA	POA
Lot 1 A	Sentinel Data Lake	Microsoft Sentinel data lake provides long-term log storage for security data. It enables cost-effective retention for compliance and investigation. The service integrates with Sentinel analytics.	POA	POA
Lot 1 A	Phi open models	Phi open models provide small language models from Microsoft. They offer efficient AI capabilities for various scenarios. The models are available through Azure AI services.	POA	POA
Lot 1 A	Nutanix Cloud Clusters	Nutanix Cloud Clusters on Azure enables running Nutanix infrastructure on Azure. It provides hybrid cloud capabilities with Nutanix management. The service supports Nutanix workload migration. Users must have Nutanix licenses and Azure subscriptions.	POA	POA
Lot 1 A	Azure Storage Actions	Azure Storage Actions enables automated blob storage operations. It provides serverless task execution based on conditions. The service supports data lifecycle management.	POA	POA
Lot 1 A	Windows Server	Windows Server on Azure provides Windows Server virtual machines in the cloud. It supports various versions and configurations. The service enables hybrid scenarios with Azure Arc.	POA	POA
Lot 1 A	Storage Accounts	Azure Storage Accounts provide container for Azure Storage services. They offer blob, file, queue, and table storage. The service provides various redundancy and performance options.	POA	POA
Lot 1 A	Content Delivery Network	Azure Content Delivery Network distributes content globally through edge locations. It reduces latency by caching content close to users. The service integrates with Azure services.	POA	POA
Lot 2 A	Enterprise Mobility + Security E3	Cloud security and management suite delivering identity protection, device management, information protection, and threat detection, enhanced with controls for securing, governing, and monitoring enterprise AI use and data exposure.	£8.12	£97.44
Lot 2 A	Enterprise Mobility + Security E5	Comprehensive cloud security suite delivering advanced identity protection, endpoint management, information protection, access governance, and cloud app security, strengthened by AI-driven threat analytics and controls to secure and govern enterprise AI use.	£12.64	£151.68
Lot 2 A	Entra ID Free	Cloud identity and access management service offering secure authentication, single sign-on, user directory services, and baseline access governance for Microsoft cloud workloads, internal applications, and third-party SaaS, with foundational controls for securing early AI interactions.	FOC	FOC
Lot 2 A	Entra ID P1	Cloud identity and access management with adaptive policies and governance for apps and AI access.	£4.61	£55.32
Lot 2 A	Entra ID P2	Advanced cloud identity security and governance for privileged access and AI-era risk controls.	£6.92	£83.04
Lot 2 A	Exchange Online Protection	Cloud email hygiene protecting mail flow and reducing phishing and malware risk.	£0.77	£9.24
Lot 2 A	M365 E5 eDiscovery and Audit	Advanced eDiscovery and investigations for compliance, with AI-assisted review controls. E5 Advanced eDiscovery and Advanced Audit deliver end-to-end, defensible investigations and long-term audit evidence. Both solutions together reduce regulatory risk, investigation cost, and time to resolution without disrupting users. Advanced eDiscovery enables organisations to rapidly find relevant data and respond efficiently to litigation, investigations, and privacy regulations. It supports defensible discovery workflows while reducing time and effort across complex requests.	£3.02	£36.24

Lot	Service Name	Service Description	Sell Price Ex Vat. Monthly	Sell Price Ex Vat. 12 months
Lot 2 A	M365 E5 Info Protection & Governance	Protecting and governing important data is more challenging and complex than ever. Microsoft Information Protection & Governance solutions help you protect and ... Includes controls supporting secure and governed AI use. Microsoft 365 E5 Information Protection & Governance provides intelligence-led classification, persistent protection, and lifecycle-driven data governance across Microsoft 365. It enables proactive risk reduction and regulatory-ready assurance without disrupting users.	£3.53	£42.36
Lot 2 A	M365 E5 Insider Risk Management	Detects, investigates, and mitigates insider risk including AI-driven data leakage. Microsoft 365 E5 Insider Risk Management helps organisations detect, investigate, and manage insider risks by correlating user behaviour and data activity, while enforcing strong privacy and ethical controls.	£3.02	£36.24
Lot 2 A	Microsoft 365 Purview Suite	Unified compliance and data risk management supporting safe AI adoption and governance.	£9.23	£110.76
Lot 2 A	Microsoft 365 Defender Suite	Integrated threat protection across identities, email, devices, apps, and AI-related threats.	£9.23	£110.76
Lot 2 A	Microsoft Defender + Purview Suite FLW	Microsoft 365 F5 is a complete, intelligent solution that extends many of the E5 features of Office 365, Windows 10 Enterprise, and Enterprise Mobility + Secur... Includes controls supporting secure and governed AI use.	£10.00	£120.00
Lot 2 A	Microsoft Defender for Cloud applications	CASB providing visibility and governance across SaaS, including AI application controls.	£2.69	£32.28
Lot 2 A	Microsoft Defender for Endpoint Plan 2		£4.00	£48.00
Lot 2 A	Microsoft Defender for Identity		£4.23	£50.76
Lot 2 A	Microsoft Defender for Office 365 Plan 1	Protects messaging and collaboration from phishing and zero-day attacks.	£2.30	£27.60
Lot 2 A	Microsoft Defender for Office 365 Plan 2	Adds automated investigation and threat hunting for advanced email attacks.	£4.00	£48.00
Lot 2 A	Microsoft Entra ID governance	Microsoft Entra ID Governance is an identity governance solution that enhances productivity, strengthens security, and facilitates compliance. It automates iden... Includes controls supporting secure and governed AI use.	£3.12	£37.44
