

Solution Brief

Insight Veeam Optimisation Assessment

Are your business systems up-to-date, secure, and delivering the performance that your organisation requires?

Our Veeam Optimisation Assessment helps you take the first step in ensuring your organisation is safe against the increasing threat of cyber-attacks by building a strong foundation for Business Continuity and Disaster Recovery.

Background

Having a resilient and up-to-date Veeam environment is key to overall business future health. So, it makes perfect sense to keep on top of IT critical capabilities and functionalities such as:

- **Security** – Conformity to best practices to mitigate cyberattacks.
- **Performance** – Configurations to maximise performance levels, in line with increasing volume of features and users.
- **Future viability of the environment** – Flexibility to adapt in a continuously shifting IT landscape.

All the same, many businesses, regardless of size, sector, or structure, are lacking in know-how and strategy when it comes to Veeam operations, despite its business-critical nature. For example, you might or might not regularly review updates and/or apply patches. As a result, system security can become compromised, and bottlenecks can occur as your system grows and gets busier over time. For this purpose, a leading-edge Veeam Optimisation Assessment carried out by an expert Insight Veeam consultant is a highly appealing proposition.

Our partner **veeam**

Benefits

- Limited, low effort and remotely run engagement
- Minimal waiting time to service delivery
- Remediation options provided to allow automated backup testing and assurance
- Presentation of user-friendly findings report

Business Challenge

Businesses need a healthy Veeam environment to develop, grow and thrive. . It's a plain fact that any defects or deficiencies in the Veeam environment can impact business continuity and DR. But despite that, many businesses seldom review their Veeam environment. Consequently, they remain unaware of impediments and risks. For example, it's common for businesses to experience some or all of the following issues, due to lack of a defined patch, upgrade, or environment review pattern:

- **Vulnerability to cyberattacks and ransomware** - Irregular, untimely or a complete absence of patching exposes the Veeam infrastructure to security threats.
- **Non-compliance with current accepted best practice** - Many environments go untouched after initial installation. As a result, they often deviate from the latest best practices for not only security, but also other crucial factors like performance and high availability. This leaves businesses ill-equipped in terms of:
 - **Prevention** – Minimising the growing threat of cybercrime, plus the potential business disruption, financial and even reputational loss it can entail.
 - **Proactivity** – Maintaining a Veeam environment that's as effective and secure as it can be, to help you face the business challenges of today and in the future. In short, businesses are potentially wide open if they don't even know they're in a precarious position.

Now, the value of looking through a holistic lens at your Veeam environment becomes apparent. For this reason, our Veeam Optimisation Assessment is an invaluable asset that clarifies your current position and informs your priorities for smarter decision-making.

Our Solution

There's no need to worry about technical elements that might seem abstract and intangible. Our experienced and specialist Veeam consultants will conduct a connected assessment of your current situation, identifying any present or prospective pain points. The aim of our assessment service is to provide you with extended visibility of your backup infrastructure. During the assessment we will gain detailed insight into the following aspects of your Veeam Backup & Replication environment as well as the underlying hypervisor platform.

- **Configuration**
- **Security**
- **Performance**
- **Capacity**
- **Veeam Backup & Replication component sizing validation**

Once the project is completed, you'll receive an actionable report of findings, including key feedback such as:		
Understanding	WHERE YOU ARE NOW	There's no assumption of risks and threats when the assessment begins. But once we've diagnosed the current outlook of your environment, we'll ensure you understand the summary and feel empowered to take any relevant actions.
Advising	WHERE YOU WANT TO BE	You'll benefit from expert advice and recommendations around backup and replication and solutions to performance problems, alongside preferable fixes and/or upgrades to your hardware, software, and licenses.
Implementing	GETTING YOU THERE	With our expert analysis at your fingertips, Insight can continuously support you in your technology journey through our range of services.

About Insight

At Insight, we define, architect, implement and manage Insight Intelligent Technology Solutions™ that help your organisation run smarter. We'll work with you to maximise your technology investments, empower your workforce to work smarter, optimise your business and create meaningful experiences.
