

FOUNDATION PLATFORM STRATEGY SERVICE

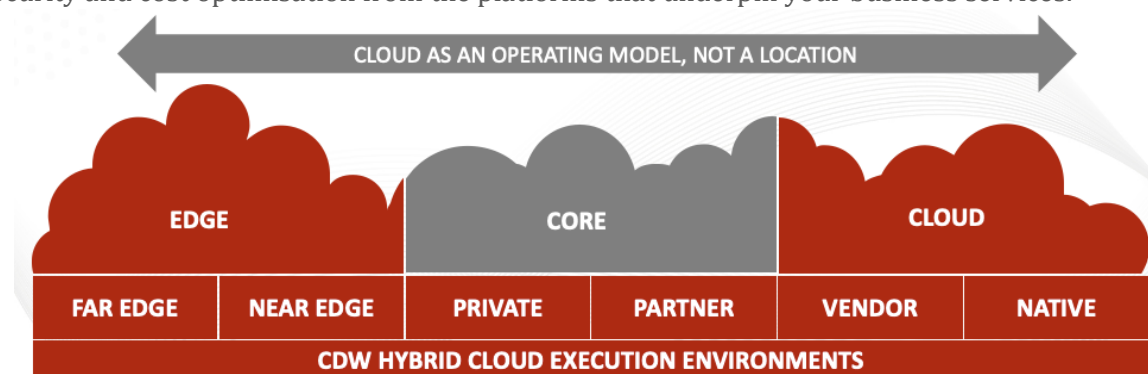

Delivering an actionable hybrid cloud roadmap

RIGHT WORKLOAD | RIGHT PLATFORM

There has never been a more critical time to ensure your platform strategy is fit for the future.

Our Right Workload, Right Platform (RW | RP) approach is designed to ensure you achieve the maximum value, velocity, security and cost optimisation from the platforms that underpin your business services.

We break down the silos of Edge, Core, and Cloud into our own defined execution environments that provide the granularity to meet all workload demands.

TRANSFORMATION LEVELS:

We offer three levels of transformation assessment, tailored to differing levels of desired outcomes:

Foundation Platform Strategy Service: Targeted for customers or workloads when we expect next-generation datacenter, private, or partner Cloud outcomes to be the most advantageous. We include overview options for the public cloud to ensure all options are considered.

Foundation Plus Platform Strategy Service: Targeted for customers or workloads that need to understand the full independent view of where to run workloads. We assess at a workload (VM, container) level and provide a view of the right execution environments based on our Right Workload | Right Platform definitions above.

Enterprise Platform Strategy Service: Our most inclusive services take the decision process to the application level and conduct a full six-R assessment of all workloads and operating models to define a full Hybrid Cloud Strategy.

OUR APPROACH:

CDW's non-biased, independent approach is designed to help organisations assess workloads and implement a cloud operating model that can span public cloud, private cloud, and edge environments. This allows organisations to harness the combined strengths of public cloud scalability and innovation with the performance, control, and cost efficiency of modernised private infrastructure.

This approach enables all workloads to be deployed in the environments best suited to their characteristics, leveraging public cloud for elasticity, AI services, and rapid innovation. It shifts steady-state and traditional workloads to software-defined, hyperconverged, and AI-accelerated data centre.

FOUNDATION PLATFORM STRATEGY SERVICE

Delivering an actionable hybrid cloud roadmap

CDW's Right Workload Right Platform (RWRP) assessment is designed to provide a 360-degree view as to what execution platform, or platforms, should be used to deliver your organisations workloads and why.

KEY COMPONENTS OF THE ASSESSMENT INCLUDE:

1. Workload Inventory and Analysis:

Each workload is assessed and documented

- Current infrastructure and environment
- Operating requirements
- Management practices
- Functionality
- Pain points and performance enhancement opportunities

2. Execution Environment Mapping:

Workloads are mapped to CDW-defined environments

- Cloud – Native / Private / Vendor
- Next Generation Data Centre
- Edge
- Hybrid

3. Platform Strategy Recommendations:

Based on findings, the assessment recommends

- Target platform(s)
- Operating model adjustments for agility and cost optimisation

4. Address Challenges and constraints:

Common challenges address as part of RWRP assessment includes

- Integration complexity
- Cross-platform data strategy
- Governance and compliance
- Skill gaps and legacy ideologies

Customer Quote: *"We could see the benefits of Hybrid Cloud but needed a technology solutions provider who could demonstrate deep technical knowledge, along with a structured approach to migration... CDW showed that it had a complete understanding of Hybrid Cloud solutions, combined with a clear roadmap to get us where we needed to be".*

Don't hesitate to contact your account team to learn more about our Hybrid cloud strategy transformation services and accelerate your journey!
