	DevOps (Bot)	Limited Access ▾

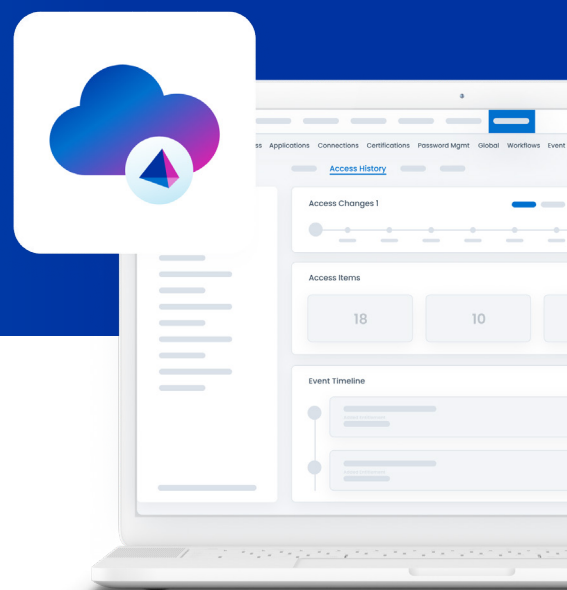

Ensure least privilege with a unified identity security solution.

Today's modern enterprises face internal pressures from executives and boards of directors, as well as external regulatory demands, requiring them to prevent cybersecurity threats while sustaining a productive workforce, reducing operating costs and enhancing profits. Managing thousands of identities in ever-changing environments and their access to essential applications is a critical component in fortifying the attack surface. Yet, it's no secret that identity and security teams are struggling to keep up with access control and governance. A largely human-based, manual approach in siloed systems leads to over provisioning access and causes non-compliance and unnecessary exposure to risks.

At SailPoint, we've developed solutions that allow the world's biggest companies to build a strong foundation for maintaining successful identity security programs with less effort and more certainty.

With artificial intelligence (AI) and machine learning (ML) at its core, SailPoint Identity Security Cloud delivers unmatched intelligence, frictionless automation, and comprehensive integration that allow enterprises to manage and secure real-time access to data, applications, and critical resources for every enterprise identity. Our experience working with leading global brands has provided insight into exactly what is needed to ensure users have only the minimum levels of access needed to perform their jobs: targeted, organized SaaS based products that work together as a single, unified solution.

Built on the SailPoint Atlas platform, our solution provides the flexibility, ease of deployment and user centricity needed in today's complex IT environments. Designed to meet organizational needs at every step of the identity security journey, Identity Security Cloud has three distinct suites. Each suite builds on the next, giving organizations more advanced capabilities as their identity requirements grow in scale, breadth, and complexity.

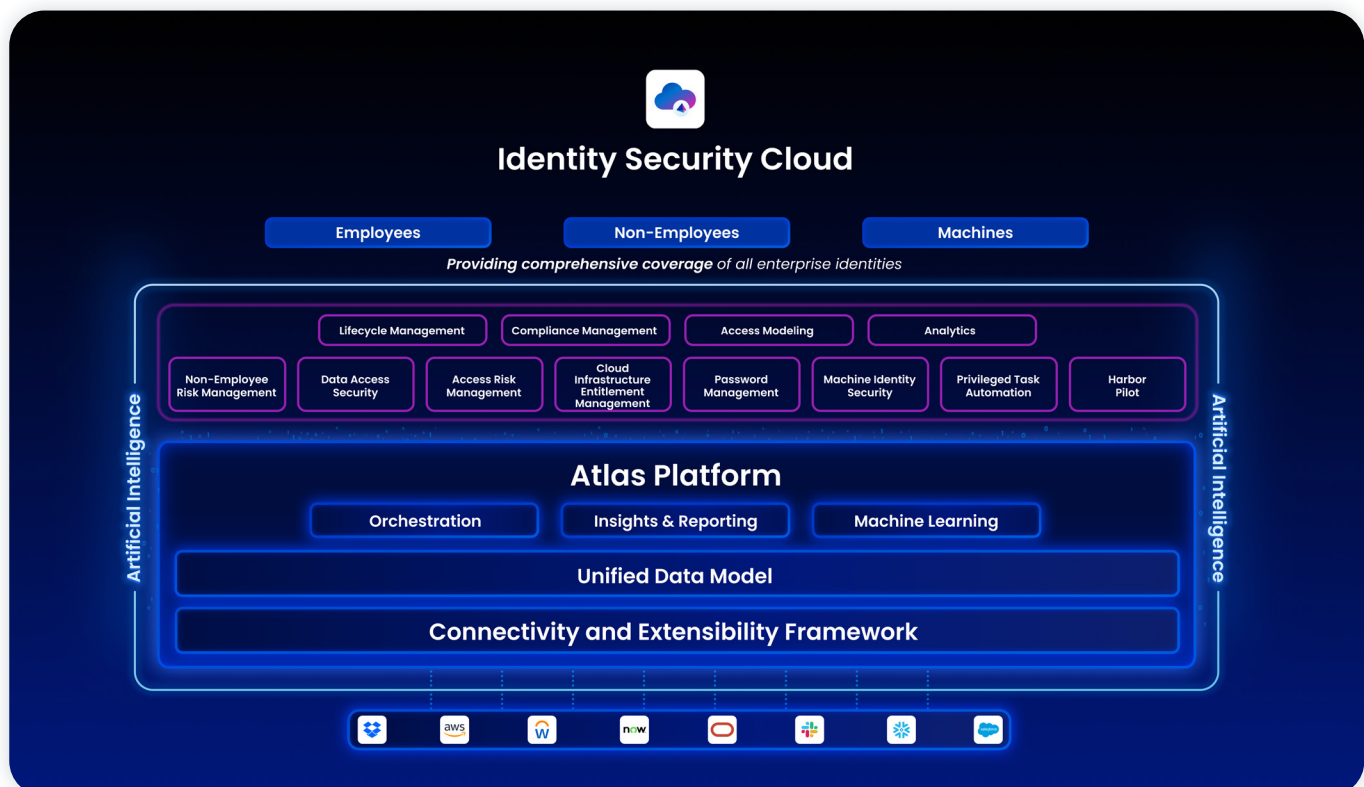

Unified. Intelligent. Powerful.

SailPoint Atlas

Identity Security Platform

SailPoint Atlas is a next-generation identity platform built to help organizations tackle new identity security challenges without having to rearchitect their solution. The unified platform redefines identity security by uniting cutting-edge AI, a unified approach, and scalable architecture. SailPoint Atlas powers our Identity Security Cloud solutions and provides faster connectivity, deeper integration, richer configuration, and reduced maintenance costs so organizations can experience quicker time-to-value, enhanced adoption, and improved user experiences. It holistically fortifies enterprises ensuring security, efficiency, and adaptability in a dynamic digital landscape by strengthening access controls, policies, and processes, with unique insights and governance simplification.

Capabilities tailored to address identity security needs today and tomorrow.

SailPoint's Identity Security Cloud solution is comprised of four product modules that offer specific capabilities tailored to address current identity security needs yet can scale and expand to meet future needs.

Access modeling

Create, implement, and optimize access roles that fit your needs.

Lifecycle management

Automate and manage the identity lifecycle from day 1.

Compliance management

Streamline identity processes and strengthen access governance.

Analytics

Turn identity data into actionable insights to make better decisions faster.

SailPoint Identity Security Cloud revolutionizes identity security for organizations by:

Empowering precision access:

- Elevate productivity by granting every identity precise and timely access by enforcing the Principle of Least Privilege (PoLP).
- Build an access model with dimensional attributes to ensure everyone has the appropriate level of access without compromising security.

Managing identity risk:

- Equip security professionals with tools to identify and manage potential identity & access risks.
- Enhance your security posture by staying ahead of threats and vulnerabilities, minimizing the impact of potential breaches.

Accelerating access decision-making:

- Leverage SailPoint Harbor Pilot AI agents as your workforce multiplier, automating tasks, streamlining information discovery, and delivering instant personalized insights.
- Facilitate faster and more effective collaboration across departments with personalized insights and automated workflows.

Simplifying compliance

- Provide internal auditors with user-friendly tools for easy compliance demonstration.
- Streamline the compliance process, ensuring that audits are seamless, accurate, and demonstrate adherence to regulatory requirements.

Privilege Task Automation:

- Automate repetitive privilege tasks to enhance efficiency, security and governance.
- Delegate the execution of privileged tasks without initiating a privileged session or exposing credentials.
- Provide a repository of privileged tasks to facilitate centralized authoring and consistent task delegation and execution.

SailPoint Identity Security Cloud Suites

Standard

Centralize & unify your identity security

Build your foundation of identity security

Business

Automate & optimize with AI, in real-time

Extend your identity security

Business Plus

Mitigate risk & simplify processes with advanced intelligence

Accelerate growth and transformation

Identity Security Cloud Standard

Standard offers the foundational capabilities organizations need at the onset of their identity security journeys to lay the groundwork for centralization and unification. Organizations can set a solid framework to request, provision and certify access and maintain policies and controls that reduce risk and demonstrate compliance. The set of capabilities enable companies to navigate current identity security challenges and can quickly scale to meet more complex needs as organizations evolve.

Identity Security Cloud Business

Business allows companies to replace time-consuming identity tasks, ineffective access reviews, and passive access controls with proactive, intelligent, and automated identity security to safeguard themselves from costly, reputation damaging security breaches. These select capabilities leverage AI and ML to help organizations accelerate results by automating tasks, simplifying role management, surfacing actionable insights to support informed decisions and by facilitating seamless adherence to stringent compliance requirements.

Identity Security Cloud Business Plus

Business Plus leverages the most comprehensive set of capabilities for extended access protection across all applications, data, and cloud resources. Organizations can maximize productivity and protection with the power of advanced analytics and activity insights to tackle risky access in real-time, optimize role management and dynamically adapt access to organizational changes with less effort and more certainty. This set of capabilities provides the highest level of visibility, automation and integration so organizations can maintain full alignment with their policies across the identity fabric.

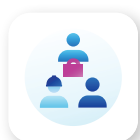

Extend protection across your identity fabric.

SailPoint Identity Security Cloud delivers the essential capabilities for organizations to uplevel their identity programs. SailPoint also offers advanced capabilities for specific use cases to expand protection across your identity ecosystem.

Cloud Infrastructure Entitlement Management (CIEM)

SailPoint CIEM allows organizations to manage multi-cloud infrastructure with a single approach by applying clearly defined policies and automating the lifecycle management of IaaS access. The solution helps organizations discover and govern access to cloud entitlements and certifications with an identity-focused approach.

Non-Employee Risk Management

SailPoint Non-Employee Risk Management enables your organization to execute risk-based identity access and lifecycle strategies for third-party non-employees and business partners. This approach increases operational efficiency, facilitates commercial initiatives, supports regulatory compliance, and reduces third-party risk.

Data Access Security

SailPoint Data Access Security empowers organizations to discover, govern, and secure critical unstructured data to minimize exposure to risks, increase productivity with automated workflows and built-in policies and get detailed insights and alerts to satisfy compliance requirements.

Access Risk Management

SailPoint Access Risk Management centralizes access risk governance, offering seamless GRC integration and extensive enterprise visibility to prevent Separation of Duties violations, automate access reviews, document risk mitigation controls, oversee emergency access, conduct proactive risk simulations, and effortlessly maintain compliance.

Password Management

SailPoint Password Management increases user productivity and minimizes the burden on support resources by enabling organizations to efficiently deploy password policies to enforce password requirements and use sync groups and a password dictionary for greater control with less risk.

Machine Identity Security

SailPoint Machine Identity Security (MIS) manages and secures machine accounts, including service accounts, bots, RPAs, and other non-human identities. MIS enables rapid discovery and classification while simplifying ownership assignment and the grouping of machine identities into applications or services for better organization. This streamlined approach ensures accountability, effective management, and governance with the same precision applied to human identities.

Choosing the right partner to guide you on your identity security journey.

SOLVAY

4 hrs

Staff onboarding reduced to 4 hours from 4 days

TRANE
TECHNOLOGIES

40%

Reduction in manually provisioned support tickets

Pick n Pay

1,400

Increased automated password resets monthly

No other vendor has the breadth of experience delivering successful identity security solutions than SailPoint. We are the leader in Identity Security with a long track record of success with complex, global enterprise clients across many verticals. By harnessing the power of AI and machine learning, SailPoint Identity Security Cloud helps companies seamlessly and autonomously deliver the right access to the right identities and technology resources at exactly the right time.

Designed with IT and security teams in mind, built-in Identity Security best practices allow for simplified administration without the need for specialized identity expertise. All new and updated features and maintenance updates are automatically delivered, requiring zero downtime and IT effort. This frees up IT resources and allows organizations to focus on delivering Identity Security program results.

About SailPoint

SailPoint equips the modern enterprise to seamlessly manage and secure access to applications and data through the lens of identity – at speed and scale. As a category leader, we continuously reinvent identity security as the foundation of the secure enterprise. SailPoint delivers a unified, intelligent, extensible platform built to defend against today's dynamic, identity-centric cyber threats while enhancing productivity and efficiency. SailPoint helps many of the world's most complex, sophisticated enterprises create a secure technology ecosystem that fuels business transformation.
