1. Pricing

1.1. Service Summary

CGI's Virtual Desktops service is ITIL-aligned and is coordinated using the Service Management System, customised to complement CGI's standard processes as defined in the within the Client Partnership Management Framework (CPMF).

CGI's Virtual Desktop service covers the following technology stacks:

- Cloud Desktops and/or VDI infrastructure such as:
- Vmware Workspace One
- Azure Virtual Desktops
- Windows 365
- Amazon Workspaces
- Key components, which are typically integrated with the above:
- Nerdio
- FSLogix.

The Managed Virtual Desktop scenario is priced here, for illustrative purposes and is based on a representative set of parameters relevant to the Virtual Desktop discipline as detailed in the associated Service Description: All the following variables are a per annum count or proportional effort only:

Pricing Table

Summary of Pricing Parameters Illustration	Total Annual Price £
• Includes up to 1000 Virtual Devices. • Vmware Workspace One, Azure Virtual Desktops, Windows 365, Amazon Workspaces are the typical market virtual solutions supported. • The service extends to the Virtual Desktop Management layer and respective virtual desktops. • Proactive Monitoring using our AI Ops platform. • The delineation of services recognises the customer may have a cloud provider of choice and have other support arrangements in place for the underpinning infrastructure. Per the service description that remains out of scope for this CGI Managed Virtual Desktop offering.	£13,542.00

** The pricing aligns to the detailed service description explanation. The service description provides a more comprehensive summary of what is supported, included, and not accounted for in this illustrative example.

** The Supplier can provide multiple illustrations and scenarios-based pricing for the client's specific requirements and unique parameters. This price represents a 1 year, (12 month) engagement.

1.2. CGI Pricing

A typical virtual desktop solution has multiple layers, this service focuses on the virtual desktop pool itself and respective management layer, where the remaining layers are key dependencies, as illustrated in the following diagram:

Figure 1 Virtual Desktop Solution Components

Note: although CGI can manage the whole stack (i.e. the out-of-scope layers), which would be a combination of multiple services across the layers, the service we are describing in this document is the Virtual Desktop Management layer and respective virtual desktops only.

1.3. Why CGI?

CGI's Virtual Desktop solution delivers a secure, scalable, and cost-efficient end-user computing environment designed to meet the evolving needs of modern organisations. By centralising desktop management and hosting applications and data within secure, managed environments or compliant cloud infrastructure, CGI ensures high availability, robust security, and assured service continuity.

Benefits

- Improved employee satisfaction, performance, and productivity.
- Enhanced security and reliability: desktops, applications, and corporate data are hosted in managed locations or secure cloud infrastructure that comply with the highest security and quality standards, ensuring secure access, high reliability, and around-the-clock availability.
- Streamlined IT through centralised management of your end-user computing environment: experience significant operational efficiencies and cost savings in areas such as desktop maintenance and support, new software deployment, and asset management. Refocus your IT resources to more strategic, value-added projects.
- Realise cost savings and added flexibility: Virtual Desktops lets you move from a traditional CAPEX investment model to a predictable, recurring OPEX model while providing the flexibility to scale your end user environment up or down based on your unique business needs.
