1. About Mastek

Mastek has been delivering Critical National Infrastructure programmes in the UK Public Sector for over a decade now. We are trusted with multiple contracts for the UK Government across Central Government, Health, Local Government, Policing, Public Protection and Defence. The majority of our national services are delivered in contexts of high uncertainty and complexity, while collaborating across multi-supplier environments.

While working for these large and complex public sector organisations, we have continuously refined our management, delivery and underlying processes to reflect key learnings from the sector:

Working through a complex stakeholder landscape: We understand the importance of establishing effective communication channels, building trust and fostering a collaborative working environment that empowers stakeholders to contribute meaningfully to the project's success. Our approach is based on a deep understanding of stakeholder needs and requirements. We leverage our experience and expertise to design governance structures that promote transparency and accountability and use data-driven reporting mechanisms to ensure stakeholders have real-time visibility into project status and progress. At the Home Office, GDS, the Ministry of Defence and the NHS, we have a proven track record of working seamlessly with large stakeholder groups, including civil servants.

Standards, compliance: We comply with >20 policies and standards, including Government Digital Standards and the Government CDDO Service Toolkit, covering service standards, service manuals, TCoP and API technical and data standards. Our stringent governance, methods, playbooks and processes (manual and automated) span across service delivery phases, ensuring continuous compliance.

Policy-driven: Policies and procedures primarily drive Public Sector organisations. We need to be Agile and flexible to meet demands for policy/regulatory changes, geopolitical events and ministerial commitments.

Culture: We adhere to the Civil Service core values of integrity, honesty, objectivity and impartiality. Key behaviours we promote stem from a combination of Civil Service and Mastek values. These include being passionate, accountable, sustaining predictable and repeatable outcomes, not transferring risk, transparent, leading to enable, acting with transparency, practising a no-blame culture and being flexible.

Did you know?

75%

Around three quarters of Local Authorities in the UK who run Oracle have worked with Mastek on their digital transformation journey.

300,000 Users

Supported managing up to 750,000 logins per month to MOD through Identity and Access Management

Crime reduction

We designed, built and manage the UK's Strategic National DNA Database that helps Forensics and Law Enforcement Authorities investigate and stop crime

90% faster

We enabled the National Health Service (NHS) to drive 90% faster response times with a billion pharmacy prescriptions a year.

Technical Service Desk

We provide level 2 and ITSM support for the One Login service at Government Digital Service

22k

Our systems enable 22,000 schools to function efficiently every day of the year.

Healthcare and manufacturing

We delivered Finance, HCM and Supply Chain transformations for clients across health and manufacturing globally powered by Oracle Cloud

Transformation of trade

Transforming UK's trade with the EU and rest of the World by supporting Customs Declarations Services and its trade users.

99.99% Availability

We support the Home Office Biometrics (HOB) Platform, Having migrated it to an AWS platform.

Our digital and cloud services portfolio

Powered by Glide 4.0 and value-based delivery

Industry-aligned approach with business outcomes

Digital engineering and experience	• Cloud engineering and migration • Legacy modernisation • Low code / no code App Dev • DevSecOps • Enterprise integration	• MACH • Digital commerce • UX and CX • Platform engineering • Gen AI software development.
Oracle Cloud and enterprise apps	• Oracle Cloud applications • Oracle consulting • Oracle Cloud infrastructure	• Value-based delivery • Glide 4.0.
Data, automation and AI	• Cloud data modernisation • Business Intelligence and Analytics	• Data management • Intelligent automation • Data Governance.
Salesforce	• Sales Cloud • Service Cloud • Marketing Cloud • Industry Cloud	• Experience Cloud • Mulesoft.
Innovation labs and platforms	• Enterprise workforce scheduler • Connected enterprise • icx-Pro – intelligent part assistant	• iLeaseFinPro.
Cloud enhancement managed services	• Oracle managed services • Digital managed services • Commerce managed services	• Salesforce managed services.

Home Office Biometrics (HOB)

Public sector platform modelled 24x7 with 99.99% availability

Problem

- Transition business-critical Platform services from incumbent supplier with minimal risk
- Migration from private cloud to AWS Cloud.

Solution

- Migrated the infrastructure from private cloud to AWS
- Embedding Kubernetes Containerisation
- Introduced Docker and fully-baked AMIs
- Supporting the platform's self-service functionality using Jenkins Jobs
- Applying security updates to the OS base images through pipelines
- Instituting automated patching and testing for infrastructure images
- Support of configuration, test and releasable artefacts through the pipeline.

Outcome

- **Zero impact** on live service
- **80% automation** of SIT
- Environment Provision **2 days to 1 hour**
- **5x scalability** in handling student BRPs
- Cost saving the authority circa **£9.5m/year.**
- Won the '**Best Use of Cloud Services**' award
- **35%** Incident Volume Reduction.

Government Digital Service

Problem

GDS initiated the One Login programme to create a single front door for identity verification and authentication, which could be adopted and scaled across all government departments. This would improve the user experience by providing the public with a single identification and verification service for the government, reduce costs as each department no longer required its own identity service and reduce identity fraud and identity-enabled crime.

GDS released a tender in June 2023 to provide a Technical Service Desk (TSD) managed service for the One Login service. This service would provide a single point of contact for level 1 and 2 service support as part of the wider support ecosystem. It would be provided in the UK and replace the incumbent's scaled-down non-ITIL-aligned break-fix service.

Solution

In September 2023, Mastek were successfully awarded the TSD contract to deliver TSD on behalf of GDS. GDS had an extremely aggressive programme driven by the onboarding of HMRC as a user, which was a major milestone planned for February 2024, migrating new and existing HMRC users to the One Login platform. The TSD service was expected to go live in November 2023. This was an extremely complex programme which, within this timescale, would deliver:

- The contact centre provider for level 0 directly facing the public
- The TSD supplier in place directly facing all government departments
- The TSD supplier in place providing L1 and L2 engineering support and monitoring
- Continued delivery on the One Login backlog of features
- Continued migration of smaller government departments to the platform.
- Delivery of a new ITSM toolset to be configured for use by GDS and the One Login programme, integrating level 0 to level 3 support
- Working as one team, Mastek quickly integrated into the programme, appointing the leadership team early in the engagement. We collaborated with GDS from the outset, ensuring we tailored the service to their expectations rather than delivering what was written in the contract.

Our leadership team consisted of:

- Service Management Vice President
- Programme Director
- Chief Technology Officer
- Programme Management office lead.

Outcome

At its height, the programme team was circa 15 strong, covering programme/project delivery, PMO, architecture, fraud, security, support, omni-channel and quality assurance. The service team is currently in place, providing circa 21 resources now covering end-to-end service management, service delivery and L1 and 2 engineering roles.

As the One Login migrations continue, Mastek is supporting Government departments onboarding to the platform as they transition into the new service and provide One Login a secure Technical Service Desk managed service with:

- Omni-channel access for other government departments via telephony, email and web form
- Provision of L1 and L2 engineering support
- 24x7, 365 days a week cover
- 24x7x365 eyes on monitoring service
- Fraud detection and security, GDPR compliant
- End-to-end (L0-3) incident and problem management
- End-to-end 24x7 Major incident management (MIM)
- On-call/call-out engineering support, incident and MI management
- Adherence to stringent SLAs on incident response, call handling and fix times
- End-to-end monthly service reporting alongside TSD KPI and SLA reporting.
- A shift left culture and mindset, reducing the impact of service on product teams (L3)
- Support with service maturity in the programme, preparing GDS to run critical national infrastructure.

Internet-facing platform and applications for Army Digital Services

Developed mobile app and web app with 24*7 high availability

Problem

- New Defence Gateway Portal
- Combine all internet-facing applications into one
- Easy to use
- Enable easier access to the MySeries portfolio of products.

Solution

Designed and developed the following easy-use Progressive Web Apps:

- Defence Gateway Landing Page
- My Leave App
- My Expenses App
- My Health App
- My Details App
- My Appraisal App
- My Admin App
- COVID-19 Reporting Tool
- Commanders' COVID-19 Tool.

Outcome

- Delivered 20+ successful projects
- Deployment Automation
- £7.5m in savings annually
- Zero Downtime
- Environment creation in hours.

Delivered a platform for the Department for Health and Social Care

Delivered capability supporting 200k+ tests in a day,
traced millions of COVID-19 infections

Problem

- Leveraging DevOps platform based on reusable GitHub, AWS and Azure DevOps Pipelines
- Introduce more flexible, scalable and reusable IaC capabilities
- Implement CI/CD pipelines.

Solution

- Uplifted from Cloud Formation into Terraform (IaC)
- Pre-built the AMIs using Packer, with automated security checks
- Immutable infrastructure, thus eliminating the risks of partial upgrades and patches
- Continual Cost Optimisation processes and other service functions, such as Change and Risk management
- Migrated into an organisation-wide collaboration toolset. This included Jira, Confluence, Trello, Miro, Teams, SharePoint, O365, Slack, etc.

Outcome

- 75% reduction in lead time due to pre-built AMIs
- Zero Downtime Deployments
- Delivered a Platform - Secured, multi-tenanted, hosted on Azure and AWS in 5 weeks
- Cost reduction achieved through close monitoring of resource utilisation.

Mastek and Technology in the Public Sector

Technical Capabilities	Relevant Technology Capability	Mastek Scale
Software Development Continuous Integration, Platform - Other Products, Cloud Collaboration Tools		Software Engineering 2354 FTE
QA and Test: API, Automated Functional and Compatibility, Accessibility & Performance		QA and Testing 774 FTE
Cloud Platforms Amazon Web Services AWS Microsoft Azure		Cloud Platforms 1046 FTE
Data BI/MI Components, Integration		BI and Visualisation 725 FTE
User-Centered Design		UCD 25 FTE
Office Automation Tools		Collaboration 4565 FTE

2. Summary

Mastek provides the skills and experience needed to deliver Architecture and Design services to modernise, migrate, and manage existing workloads, and to build new solutions utilising VMware environments and products alongside industry-leading public and private platforms to provide hybrid and multi-cloud environments. This allows Mastek to help our customers build, run, manage, connect to and protect applications running in a hybrid cloud environment and to optimise how they operate VMware-supported environments and solutions.

These disciplines are supported by our enterprise repository, which is rich in frameworks, methods and reference architectures to provide best practices, standards and guidelines for running an architecture function within an organisation.

3. Masteks Service

Mastek has over a decade of experience providing virtualisation and cloud computing services to our customers, including cloud architecture and design and building and supporting applications in these environments.

Mastek has successfully supported customers in how they compete, create, and capture value on their digital modernisation journey by designing robust, elastic, and resilient solutions that leverage modern architectural patterns such as microservices, MASA, and event-driven architecture.

3.1 What Our VMware Architecture Includes

Our VMware Application Architecture Services include:

- Application architecture discovery and readiness assessment.
- Application modernisation assessment.
- Architecture capability assessment and set up of appropriate operating model.
- Architect and design cloud-ready applications
- Architect and design of cloud application deployment lifecycle.
- Infrastructure as Code services.
- Cloud governance, risk management and compliance.
- Cloud architecture rationalisation and cost optimisation.
- Cloud information security and risk architecture review.

3.2 Proven Framework for Cloud Application Architecture Development

Below is our proven framework for cloud application architecture development:

Mastek's "EVOLVE" Framework for Cloud Application Architecture development simplifies and accelerates your cloud journey. We take a customer-centric, incremental value-delivery approach to drive innovation and work collaboratively using flexible commercial models, ensuring the highest delivery performance, quality improvements and productivity. Mastek's expertise and structured processes help you build a modern, secure, scalable, robust IT landscape that realises your current and future business objectives.

Figure 1: Evolve - A Holistic Framework for Cloud Application Architecture Development

- Envisage:
 - Envisage the architecture vision aligned with the business vision and objectives.
 - Create the statement of architecture work and communication plan. Set the architectural principles.
 - Create the business case.

- **Valueate:**
 - Valueate the current landscape regarding people, processes and technology.
 - Review the organisational context and assess the architecture capability.
 - Create baseline architecture for business, data, applications and technology.
- **Operating model:**
 - Roll out the next generation operating model consisting of organisation structure, processes, culture, governance model and KPIs.
 - Build long-term and strategic partner ecosystems to support the public, private and hybrid cloud setup.
- **Launch:**
 - Launch the cloud application architecture development program.
 - Create target architecture for business, data, application and technology. Perform gap analysis. Identify opportunities and solutions.
 - Select tools and technologies. Draw exit strategies. Select IaaS, PaaS and SaaS services. Select cloud providers.
 - Create a modernisation roadmap to traverse from the baseline to the target landscape through transition architectures.
- **Verify:**
 - Measure the value delivered and verify against the pre-defined KPIs and architecture vision.
 - Loop through the architecture development and improve the cloud application architecture.
- **Enhance:**
 - Build a workplace that fosters an innovation culture.
 - Enhance continuous improvement through innovation and Technology refresh.

4. Key Features

The key features of our services around VMware are:

4.1 Application Architecture Discovery and Readiness Assessment

Using various tools, discover the application portfolio, infrastructure, and data, and assess their readiness for migration from on-premises to the cloud, or identify the need for a hybrid environment. Create a business case that aligns with the business vision and objectives.

4.2 Architecture Capability Assessment and Setup of the Operating Model

Assess an organisation's architecture capability using the Cloud Capability Assessment framework and set up the operating model to support public, private, or hybrid cloud deployments.

4.3 Architect and Design of Cloud-Native Applications

Create an architecture vision aligning with the business goals and objectives. Discover baseline architecture, define target architecture, and define transition architectures to move from baseline to target architectures across domains such as business, data, applications, and technology. Create a roadmap and migration strategy.

4.4 Architect and Design of Cloud-Ready Application Deployment Lifecycle

Architect and design people, processes, tools and technology for the deployment lifecycle of cloud-native applications, such as Agile, DevSecOps and CI/CD.

4.5 Infrastructure as Code Services

Management of infrastructure (networks, virtual machines, load balancers and connection topology).

4.6 Cloud Governance, Risk Management and Compliance

Establish and operate an architecture board for cloud governance, risk management and compliance with regulations and organisational policies.

4.7 Cloud Architecture Rationalisation and Cost Optimisation

Review and assess the cloud architecture (business, data, applications, and technology), and rationalise it for optimal performance and cost.

4.8 Cloud Information Security Architecture Review

Review and assess the cloud information security architecture against various security standards, such as ISO/IEC 27001.

5. Business Benefits

Value adds, business benefits:

- Cloud native applications with continuous delivery of business value.
- Faster release pace; quickly conceive, build and ship more value to your customers.
- Holistic approach for architecture development with full alignment to the Government's Digital Strategy.
- Highly scalable, reliable and secured architecture to reduce digital debt.
- Improve quality and increase productivity through hyper-automation.
- Increased ROI through continuous observability and improvements.
- Reduced risk through multi-cloud platforms and a well-defined exit strategy.
- Seamless integration with an on-premise system of records in a hybrid landscape.

6. Technologies and Vendor Support

#	Technologies	Vendor Support
1	• Discovery and Assessment tools • Cloud Migration tools • Hybrid cloud • Virtualisation • IaaS, PaaS • Serverless • DevSecOps • Containers • Compute Services • Database Services • Network Services • Manage/Monitoring Services • Machine Learning Services.	• VMware.
