## 1. About Mastek

Mastek has been delivering Critical National Infrastructure programmes in the UK Public Sector for over a decade now. We are trusted with multiple contracts for the UK Government across Central Government, Health, Local Government, Policing, Public Protection and Defence. The majority of our national services are delivered in contexts of high uncertainty and complexity, while collaborating across multi-supplier environments.

While working for these large and complex public sector organisations, we have continuously refined our management, delivery and underlying processes to reflect key learnings from the sector:

**Working through a complex stakeholder landscape:** We understand the importance of establishing effective communication channels, building trust and fostering a collaborative working environment that empowers stakeholders to contribute meaningfully to the project's success. Our approach is based on a deep understanding of stakeholder needs and requirements. We leverage our experience and expertise to design governance structures that promote transparency and accountability and use data-driven reporting mechanisms to ensure stakeholders have real-time visibility into project status and progress. At the Home Office, GDS, the Ministry of Defence, and the NHS, we have a proven track record of working seamlessly with large stakeholder groups, including civil servants.

**Standards, compliance:** We comply with >20 policies and standards, including Government Digital Standards and the Government CDDO Service Toolkit, covering service standards, service manuals, TCoP, and API technical and data standards. Our stringent governance, methods, playbooks and processes (manual and automated) span across service delivery phases, ensuring continuous compliance.

**Policy-driven:** Policies and procedures primarily drive Public Sector organisations. We need to be Agile and flexible to meet demands for policy/regulatory changes, geopolitical events and ministerial commitments.

**Culture:** We adhere to the Civil Service core values of integrity, honesty, objectivity and impartiality. Key behaviours we promote stem from a combination of Civil Service and Mastek values. These include being passionate, accountable, sustaining predictable and repeatable outcomes, not transferring risk, transparent, leading to enable, acting with transparency, practising a no-blame culture and being flexible.

## Mastek's global presence

### **Australia**

## Did you know?

**75%**

Around three quarters of Local Authorities in the UK who run Oracle have worked with Mastek on their digital transformation journey.

**300,000 Users**

Supported managing up to 750,000 logins per month to MOD through Identity and Access Management

**Crime reduction**

We designed, built and manage the UK's Strategic National DNA Database that helps Forensics and Law Enforcement Authorities investigate and stop crime

**90% faster**

We enabled the National Health Service (NHS) to drive 90% faster response times with a billion pharmacy prescriptions a year.

**Technical Service Desk**

We provide level 2 and ITSM support for the One Login service at Government Digital Service

**22k**

Our systems enable 22,000 schools to function efficiently every day of the year.

**Healthcare and manufacturing**

We delivered Finance, HCM and Supply Chain transformations for clients across health and manufacturing globally powered by Oracle Cloud

**Transformation of trade**

Transforming UK's trade with the EU and rest of the World by supporting Customs Declarations Services and its trade users.

**99.99% Availability**

We support the Home Office Biometrics (HOB) Platform, Having migrated it to an AWS platform.

# Our digital and cloud services portfolio

**Powered by Glide 4.0 and value-based delivery**

Industry-aligned approach with business outcomes

|                                           |                                                                                                                                                                                                                  |                                                                                                                                                                                   |

# Home Office Biometrics (HOB)

Public sector platform modelled 24x7 with 99.99% availability

## Problem

- Transition business-critical Platform services from incumbent supplier with minimal risk
- Migration from private cloud to AWS Cloud.

## Solution

- Migrated the infrastructure from private cloud to AWS
- Embedding Kubernetes Containerisation
- Introduced Docker and fully-baked AMIs
- Supporting the platform's self-service functionality using Jenkins Jobs
- Applying security updates to the OS base images through pipelines
- Instituting automated patching and testing for infrastructure images
- Support of configuration, test and releasable artefacts through the pipeline.

## Outcome

- **Zero impact** on live service
- **80% automation** of SIT
- Environment Provision **2 days to 1 hour**
- **5x scalability** in handling student BRPs
- Cost saving the authority circa **£9.5m/year.**
- Won the '**Best Use of Cloud Services**' award
- **35%** Incident Volume Reduction.

# Government Digital Service

## Problem

GDS initiated the One Login programme to create a single front door for identity verification and authentication, which could be adopted and scaled across all government departments. This would improve the user experience by providing the public with a single identification and verification service for the government, reduce costs as each department no longer required its own identity service and reduce identity fraud and identity-enabled crime.

GDS released a tender in June 2023 to provide a Technical Service Desk (TSD) managed service for the One Login service. This service would provide a single point of contact for level 1 and 2 service support as part of the wider support ecosystem. It would be provided in the UK and replace the incumbent's scaled-down non-ITIL-aligned break-fix service.

## Solution

In September 2023, Mastek were successfully awarded the TSD contract to deliver TSD on behalf of GDS. GDS had an extremely aggressive programme driven by the onboarding of HMRC as a user, which was a major milestone planned for February 2024, migrating new and existing HMRC users to the One Login platform. The TSD service was expected to go live in November 2023. This was an extremely complex programme which, within this timescale, would deliver:

- The contact centre provider for level 0 directly facing the public
- The TSD supplier in place, directly facing all government departments
- The TSD supplier in place providing L1 and L2 engineering support and monitoring
- Continued delivery on the One Login backlog of features
- Continued migration of smaller government departments to the platform.
- Delivery of a new ITSM toolset to be configured for use by GDS and the One Login programme, integrating level 0 to level 3 support
- Working as one team, Mastek quickly integrated into the programme, appointing the leadership team early in the engagement. We collaborated with GDS from the outset, ensuring we tailored the service to their expectations rather than delivering what was written in the contract.

Our leadership team consisted of:

- Service Management Vice President
- Programme Director
- Chief Technology Officer
- Programme Management office lead.

## Outcome

At its height, the programme team was circa 15 strong, covering programme/project delivery, PMO, architecture, fraud, security, support, omni-channel and quality assurance. The service team is currently in place, providing circa 21 resources now covering end-to-end service management, service delivery and L1 and 2 engineering roles.

As the One Login migrations continue, Mastek is supporting Government departments onboarding to the platform as they transition into the new service and provide One Login a secure Technical Service Desk managed service with:

- Omni-channel access for other government departments via telephony, email and web form
- Provision of L1 and L2 engineering support
- 24x7, 365 days a week cover
- 24x7x365 eyes on monitoring service
- Fraud detection and security, GDPR compliant
- End-to-end (L0-3) incident and problem management
- End-to-end 24x7 Major incident management (MIM)
- On-call/call-out engineering support, incident and MI management
- Adherence to stringent SLAs on incident response, call handling and fix times
- End-to-end monthly service reporting alongside TSD KPI and SLA reporting.
- A shift left culture and mindset, reducing the impact of service on product teams (L3)
- Support with service maturity in the programme, preparing GDS to run critical national infrastructure.

# Internet-facing platform and applications for Army Digital Services

Developed mobile app and web app with 24\*7 high availability

## Problem

- New Defence Gateway Portal
- Combine all internet-facing applications into one
- Easy to use
- Enable easier access to the MySeries portfolio of products.

## Solution

Designed and developed the following easy-use Progressive Web Apps:

- Defence Gateway Landing Page
- My Leave App
- My Expenses App
- My Health App
- My Details App
- My Appraisal App
- My Admin App
- COVID-19 Reporting Tool
- Commanders' COVID-19 Tool.

## Outcome

- Delivered 20+ successful projects
- Deployment Automation
- £7.5m in savings annually
- Zero Downtime
- Environment creation in hours.

# Delivered a platform for the Department for Health and Social Care

Delivered capability supporting 200k+ tests in a day,  
traced millions of COVID-19 infections

## Problem

- Leveraging DevOps platform based on reusable GitHub, AWS and Azure DevOps Pipelines
- Introduce more flexible, scalable and reusable IaC capabilities
- Implement CI/CD pipelines.

## Solution

- Uplifted from Cloud Formation into Terraform (IaC)
- Pre-built the AMIs using Packer, with automated security checks
- Immutable infrastructure, thus eliminating the risks of partial upgrades and patches
- Continual Cost Optimisation processes and other service functions, such as Change and Risk management
- Migrated into an organisation-wide collaboration toolset. This included Jira, Confluence, Trello, Miro, Teams, SharePoint, O365, Slack, etc.

## Outcome

- 75% reduction in lead time due to pre-built AMIs
- Zero Downtime Deployments
- Delivered a Platform - Secured, multi-tenanted, hosted on Azure and AWS in 5 weeks
- Cost reduction achieved through close monitoring of resource utilisation.

# Mastek and Technology in the Public Sector

## 2. Summary

The service covers consulting to establish the application security ambition, define governance and delivery workflows and agree on how security will be embedded into Agile/DevSecOps teams and product delivery. This phase typically baselines current tooling and processes, then designs a target operating model that clarifies ownership, triage rules, risk acceptance and evidence requirements for audit and compliance.

Implementation integrates security controls into the SDLC and CI/CD pipelines, combining automated testing (SAST/DAST/IAST), open-source analysis and secrets scanning with threat modelling and targeted manual testing where needed. For modern engineering stacks, the implementation also extends to pipeline patterns that analyse application code and infrastructure-as-code and can include container and serverless scanning controls aligned to cloud-native delivery.

Ongoing operations run AppSec as a managed capability, including monitoring and quality control, tuning rules to reduce noise, coordinating remediation backlogs with engineering teams, and reporting posture and progress to security and leadership stakeholders. This operating model keeps application security effective as codebases, third-party components, tooling and delivery practices evolve, while maintaining a consistent standard of control across portfolios and platforms.

### 3. Key Features

- Consulting-led current-state assessment and target-state AppSec.
- SDLC/CI-CD integration for automated security scanning and remediation.
- Continuous application security testing coverage: static, dynamic and interactive testing.
- Software composition and open-source analysis (SCA) with policy gates.
- Threat modelling and risk analysis to drive “shift-left” decisions.
- Credential/secrets scanning and security checks in to developer workflows.
- Penetration testing and targeted manual validation.
- Cloud/IaC/container/Lambda scanning into modern platform delivery pipelines.
- Security operations integration for faster triage and response.
- Managed operations: continuous monitoring, reporting, quality control, tuning.

#### 4. Business Benefits

- Earlier vulnerability detection reduces rework and additional costs.
- Ongoing security monitoring and quality control.
- Improved SDLC resilience by automating security checks.
- Reduced exposure from open-source risk through continuous component control.
- Stronger secure engineering culture via secure-coding guidance and training.
- Coverage across development environments, applications and SaaS.
- Cover Gen AI-based code generated to fix vulnerabilities.
- Coverage of OWASP SAMM, ASVS.
- Improved compliance support through consistent controls and evidence.

## 5. Tools and Framework Services

### 5.1 Tools

- Snyk for developer-first AppSec scanning (including SAST and SCA) integrated into CI/CD workflows.
- Synopsys Black Duck for software composition analysis (SCA), including vulnerability and license risk management across third-party/open-source dependencies.
- IriusRisk, Microsoft Threat Modeller for threat modelling at scale, with automated generation of security requirements/countermeasures from architecture models.

### 5.2 Frameworks and Standards

- OWASP Top 10 as a reference for the most critical web application security risks.
- OWASP ASVS to define and verify application security requirements at appropriate assurance levels.
- OWASP SAMM to assess and improve secure software practices and AppSec programme maturity over time.
- NIST SSDF (NIST SP 800-218) to structure secure software development practices across the SDLC.
