

Secure Migration & Modernization

Migrate and Modernize your Estate

Microsoft has a **comprehensive** program to accelerate your migration and modernization to/in Microsoft Azure and enable innovation in the Microsoft cloud.

The program is delivered jointly by Microsoft consultants and partners in conjunction with your IT organization to migrate and modernize applications, data, and infrastructure, at scale, to Microsoft Azure. Whether your systems reside on-premises, with other cloud providers, or is already in Azure, our solution combines agile delivery and intelligent automation leveraging AI.

We partner with you to build a cloud-first culture and secure cloud platform to serve as the foundation for **new business models and innovation**, improving business agility and growing value, while reducing cost, complexity, and risk.

On-Prem to Cloud

Move applications, data and infrastructure from on-premise to Azure

Cloud to Cloud

Move workloads from cloud providers such as AWS/GCP to Azure to take advantage of Azure Services such as AI

In-Cloud

Modernize and update workloads already in cloud and workloads between Azure regions (new datacenters)

Approach

This solution addresses the challenges of modern cloud platform adoption, accelerates the path to value, removes common roadblocks, and ensures consistent outcomes with a proven repeatable process.

Covering all aspects of the cloud transition journey, our solution also establishes a cloud foundation aligned to the Cloud Adoption Framework for Azure, providing your teams with the tools and skills to secure, operate and govern your cloud assets, and manage organizational change.

Evidence

SAS: Transition to Azure

Scandinavian Airlines harnessed Azure to reduce infrastructure **expenses** and enhance the agility of its development teams. The transition to Azure included adopting Azure Kubernetes Service (AKS) and Azure Database for PostgreSQL – Flexible Server, ensuring high availability for its booking application.

EN: Flow of information

Point-of-sale software provider Epos Now wanted to deliver higher quality reporting capabilities for its thousands of business customers to gain data insights and make better business decisions. It chose to migrate its Microsoft SQL Server data from Amazon Web Services to Microsoft Azure for a more robust, connected data ecosystem.
