

Google Workspace Audit

A comprehensive audit of your Google Workspace environment for a detailed understanding of security and policy configuration, as well as user and data management.

Users & Groups

Pinpoint inactive accounts and groups with open permissions to improve licence attribution and access.

Personal Shares

Uncover archaic and bad data storing practices with large complex folder structures residing in personal drives.

Exposed Data

Identify over-shared or publicly available business data to help reduce exposure and implement mitigations.

Stale Data

Unearth old and inactive data prime for archival or purge, with advice around Vault management.

Device & Browser

Gain insight into endpoints and browsers accessing business data to assess security gaps and managed states.

Apps & Extensions

Discover application access and usage in an effort to restrict shadow IT and ensure compliance standards are met.

And more

Expand your audit to cover additional services, such as Looker Studio, Apps Script, and Gemini, to gauge usage and ensure appropriate support and training for enhanced productivity.

What you get

- Project Management & Planning
- Tooling Access & Configuration
- Data Scans & Analysis
- Technical Documentation & Output
- Report of Findings
