

PALANTIR FDP SERVICES

G-CLOUD 15

SERVICE OVERVIEW

Telefónica Tech's **Palantir Foundry Platform (FDP) Services** support the design, configuration, and operation of data platforms built on **Palantir Foundry**. The service enables organisations to integrate, manage, and analyse data from multiple sources within a governed environment, supporting operational reporting, analytics, and decision-making use cases.

The service covers platform setup, data integration, modelling, governance, and ongoing support. Telefónica Tech applies structured delivery and assurance practices to help organisations use Foundry safely and effectively, ensuring data is reliable, traceable, and aligned to organisational and regulatory requirements.

KEY FEATURES

- Design and configuration of **Palantir Foundry data platforms**
- Integration of data from **multiple source systems** into a single environment
- Development of **data models and pipelines** to support analytics and operations
- Support for **analytics, reporting, and decision-support use cases**
- Data governance, lineage, and access control aligned to organisational policies
- Environment management, release coordination, and change support
- Collaboration support for **technical and business users**
- **Secure by design**, with controlled access and auditability

SERVICE BENEFITS

- Enables consistent use of **trusted data across the organisation**
- Improves visibility and confidence in **data used for decision-making**
- Reduces risk through **controlled data access and governance**
- Supports complex operational and analytical use cases
- Simplifies integration of data from **disparate systems**
- Provides a scalable platform for **ongoing data and analytics needs**
- Aligns data platform usage with **compliance and assurance requirements**
