Service Overview

We secure your digital environments and maintain the continuity of your business with a leading and advanced solution in protection against DDoS attacks.

It is a managed protection service against DDoS attacks from the network to the customer's dedicated links. No equipment installation is required thanks to the collaboration of Telefónica in its role as an ISP.

Traffic destined for the customer's network is monitored, and attacks are mitigated before they reach the customer's link, either on the international or national transit network, depending on the specific case.

Additional Services

- Digital Risk Protection. This service enhances customer awareness of digital exposure, identifying threats and risks to reputation and brand. It supports business continuity and mitigates online threats with real evidence (Threat Intelligence).

- Cyber Threat Intelligence. This intelligence provides insights into the smallest specifics of particular attacks (IoCs), the tactics, techniques, and procedures (TTPs) of campaigns and threat actors, and overarching trends in attacks and the threat landscape. Additionally, when shared with different teams within the organisation, it can help identify, communicate, and mitigate risks across the entire organisation, such as through interviews, workshops, and the review of existing documentation.

Our Deliverables:

- Detection: continuous monitoring of traffic directed towards the customer's links to obtain statistical usage data and to detect massive volume attacks that saturate these links (volumetric attacks).
- Mitigation: traffic from customers under attack is diverted to a series of mitigation "farms". A mitigation process is carried out where a distinction is made between

Benefits:

Fully managed Service - This solution is provided in service mode, with no operational investment required from the customer.

Privacy Focussed - Statistical information (netflow) is analysed, guaranteeing the security and secrecy of communications

24/7 Monitoring and Response - Our DOC experts provide permanent monitoring and 24/7 attention. They analyse the alerts detected and proceed with mitigation in case the attack is confirmed. Our customers benefit from our defined SLA for incidents.

Non-intrusive - Activated on the customer's dedicated links, it does not involve modifications to the customer's equipment.

Why Telefónica Tech?

1. Our Propel method gets you from idea to working solution fast. This lets you unlock value quickly from your modernisation initiatives.
2. We have deep expertise across the full app stack with proven customised solutions that speed your modernisation.
3. We help you adopt change with less risk and disruption, using modular delivery that keeps compliance and quality high.

We focus on high-value apps and features that deliver clear business impact.

Additional Services to Elevate Your Business

Cloud Strategy
Scale cloud adoption for maximum business impact.

GreenOps
Measure and optimise your cloud carbon footprint, making your cloud operational sustainable.

FinOps
Optimise your cloud spending and boost financial accountability.

Multi-Cloud
Deliver workload freedom by deploying your workloads across multiple cloud providers seamlessly.

Cloud Managed Services
Expert management and support for your cloud environment.

Leading the Way in *Digital Transformation* for our Customers

Telefónica Tech unlocks the power of integrated technology, bringing together a unique combination of the best people, with the best tech and the best platforms, supported by a dynamic partner ecosystem to make a real difference to every business, every day.
