

Cloud Transformation Services

G-Cloud 15

SERVICE OVERVIEW

Cloud can provide significant cost savings, enhance agility, eliminate technology bottlenecks, and enable rapid business innovation. Having worked with a range of public and private sector clients supporting the implementation of their Cloud objectives, Telefónica Tech can share its knowledge, expertise, and experience to assist with the successful realisation of your Cloud ambitions.

Telefónica Tech has been responsible for the successful delivery of numerous cloud-orientated programmes and projects within the public sector.

Telefónica Tech Transformation Services helps organisations successfully transform their Cloud strategy on time and on budget while ensuring that the integrity of the environment is protected. As public sector organisations adopt Cloud computing strategies, existing 'As Is' applications and services will need to be transitioned into a new 'To Be' Target Operating Model.

Our Transformation Services help organisations to:

- Strategically plan which applications, services and data will be migrated to the Cloud;
- Plan the order and priority of applications, services and data transition;
- Decide on a migration strategy – phased, parallel, en masse;
- Plan for data migration – including bandwidth, volumes, formats, and security;
- Review Business Continuity requirements;
- Define the performance and service level criteria for the new environment;
- Develop exit management procedures;
- Involve key stakeholders;
- Train users;
- Communicate with users, suppliers, and other interested parties; and
- Assess the technical and non-technical impacts of any transition.

This service is ideal if you have a specific Cloud deployment project that you wish to complete that involves multiple technologies and vendors. The resource can be utilised as a project where appropriate consultants will be assigned to achieve the desired outcome within the time and budget limits agreed with the customer.

Key Features

- Outline and full business case development (OBC/FBC)
- Technical and programme assurance
- NHS Electronic Patient Record (EPR/EHR) cloud delivery
- NHS Application knowledge, including Epic, Cerner, PatientFlow, and AllScripts.
