

HEALTH FDP CENTRAL DATA PLATFORM INTEGRATION

G-CLOUD 15

SERVICE OVERVIEW

Telefónica Tech's Health FDP Central Data Platform Integration service supports the integration of health and care data into a central Palantir Foundry-based data platform. The service enables consistent, secure data flows from multiple systems to support operational, analytical, and planning use cases across health organisations.

The service is designed to operate within health data governance, security, and assurance frameworks, supporting interoperability, data quality, and traceability while minimising disruption to existing systems.

KEY FEATURES

- Integration of clinical, operational, and administrative health data
- Design and implementation of secure data ingestion pipelines
- Support for structured and unstructured health data sources
- Alignment with health data standards and governance requirements
- Data validation, transformation, and quality assurance
- Documentation and auditability of data flows
- Secure by design with controlled access and monitoring.

KEY BENEFITS

- Provides a trusted central view of health and care data
- Improves data consistency and availability across organisations
- Supports operational planning and performance management
- Reduces integration complexity and duplication
- Enhances confidence in data used for decision-making
- Maintains compliance with health data governance requirements.

Thank you
