

MICROSOFT FABRIC SERVICES

G-CLOUD 15

SERVICE OVERVIEW

Telefónica Tech provide all setup, configuration and management of Microsoft components to design and develop secure, enterprise scale Data Platforms and Reporting solutions providing full Data Analytics, Business Intelligence and AI capabilities. Includes the use of Microsoft Fabric, Lakehouse, Data Lakes, Purview, Data Factory, Power BI.

KEY FEATURES

- Full enterprise-class, petabyte scale Data Analytics experience
- Bring together disparate data sources to a single platform
- Connect to on-premises and cloud data sources, securely
- Unified platform for Data Engineering and Data Science (AI)
- Take advantage of Telefónica Tech's cloud platform frameworks
- Flexible engagement approach - quickly deliver a POC
- Quickly deploy a cloud based platform (CI/CD, DevOps)
- Integrated with Power BI, Machine Learning, Apache Spark, Data Lakehouse
- Secure by design (VNets, Private Endpoints, RBAC)

SERVICE BENEFITS

- Empower users to discovery, analyse and visualise data
- Works seamlessly with other Azure BI components
- Make your data available to other processes and services
- Address complex reporting needs with visual dashboards
- Provide a data science platform for complex analysis
- Visualise reports and dashboards on mobile devices
- Measure performance against business and customer KPI's
- Secure by design
