

# DATA INTEGRATION

## G-CLOUD 15

## SERVICE OVERVIEW

Telefónica Tech provide data integration services, using the Microsoft technology stack, to allow organisations to combine data sets from disparate sources into meaningful and valuable information sets. The application of Data Engineering ensures that pipelines are built to transform data sets into useful formats which are validated, cleansed and transformed.

## KEY FEATURES

- Build and maintain data pipelines
- Bring together multiple data sets from disparate sources
- Ensure data is validated and cleansed ensuring usability
- Take advantage of Telefónica Tech's cloud platform frameworks
- Flexible engagement approach - quickly deliver a POC

## SERVICE BENEFITS

- Empower users to discovery, analyse and visualise data
- Make your data available to other processes and services
- Provides data scientists with validated data sets
