

Identity Access Management (IAM) and Privileged Access Management (PAM Services)

Zero-Trust Access to Corporate Resources

Service Overview

Our Identity and Access Management (IAM) experts are available to assist you at any stage of your IAM journey. By understanding the business's needs, assessing regularity compliance requirements, and identifying overall functional requirements, we can determine the required IAM Target Operating Model (TOM). Once the IAM TOM is agreed, we will provide you with a roadmap to deliver a fully functional IAM service that prioritises key items for delivery, helping to enforce IAM policy consistently across your estate, whether on-prem or in a hybrid/Cloud environment. Having the confidence that the correct IAM policy is enforced will allow for the Automation of provisioning of services to users and that this access is appropriate for their role, reducing the time of provisioning these services, improving the user experience and improving your security posture by reducing the threat vectors across your IAM estate and reducing human errors.

Working with our IAM strategic partners, we can provide flexible IAM services based upon your needs, whether that is a fully managed Telefonica Tech IAM service to aid you with managing all user or OT identities, full life cycle management, Access Management and authentication, management of privileged Identities, as well as more specific IAM-defined services based upon your specific use cases.

Bringing together the key elements of Identity Governance, Access Management and Privileged Access Management, we can work with you to enable an IAM service that will solve the tactical challenges of today, whilst providing a strategic platform to build for the future and ensure the service is fit to grow with the ever-growing demands of the business.

Telefónica Tech offers the Privilege Access Management (PAM) service to help our clients protect all privileged accounts by guarding their passwords, isolating their sessions, and proactively monitoring their accesses, allowing organisations to protect their infrastructure and applications, manage their business efficiently and maintain the confidentiality of sensitive data and critical infrastructure.

Benefits:

Telefonica Tech's Flex Services provides access to IAM resources for all IAM vendor technologies and competences

Solutions can be integrated with Telefonica Tech's Cyber Security & Cloud security Monitoring services, to enable maximum security at all times, backed up by our certified global SOCs

Telefonica Tech's IAM services are well defined and proven to reduce implementation friction by adopting agile deployment models for hybrid and complex environments, as well as transparent scaling

Agile Adoption of passwordless and adaptive systems
Protection of key infrastructure and sensitive information

Why Telefónica Tech?

1. Our Propel method gets you from idea to working solution fast. This lets you unlock value quickly from your modernisation initiatives.
2. We have deep expertise across the full app stack with proven customised solutions that speed your modernisation.
3. We help you adopt change with less risk and disruption, using modular delivery that keeps compliance and quality high.

We focus on high-value apps and features that deliver clear business impact.
