

SDWAN

Service Overview

A key part of the NextDefense portfolio is flexWAN, Telefonica Tech's SDWAN service powered by Fortinet, which converges the management of network and security through a single pane of glass. This offering is provided on an MSSP "evergreen" model, and eliminates the customer's investment required in management systems, licenses and updates.

flexWAN is provided as a network overlay that can work with the customer's existing WAN and assist in transforming connectivity from MPLS and outdated access technologies. By securing local internet breakout this supports an IT strategy to adopt SaaS, public clouds and remote working.

By integrating with other products, flexWAN can be extended into a secure fabric and SASE, unifying security policies across user groups and customer locations.

Underlay Agnostic – As a network overlay, flexWAN can work with whatever access network the customer chooses; MPLS, 5G, broadband or wireless

Minimal Cap-Ex – flexWAN is offered as-a-Service, without the up-front investment in hardware and licenses, and pre-staged for Zero-Touch Provisioning

Compliant and Transparent – On-demand Real-Time reporting on network activity and security incidents, integrated with LDAP. Optional co-management of simple changes.

Right-Sized Equipment – With granular model variants in hardware, virtual and cloud formats, flexWAN minimises power and footprint requirements

Full Project Management and Deployment – All sites can be deployed by Telefonica Tech as part of a customer-led project, working with your team to coordinate the cut-overs and de-risk the transformation.

Key Features:

- Converged management of the WAN routing with the NGFW security at the Data Centre, network edge and in public cloud
- Bespoke configuration of policy-based secure routing for applications to DC-hosted, cloud and SaaS platforms
- Provides the customer with real-time visibility of the network and security with optional co-management

Additional Services

- Network Services: For consolidated management underlay can be provided using the widest possible range of technologies through our access network partnerships.
- Security Services: Multi-Factor Authentication and Network Access Control (NAC).
- Managed Firewall and Internet Access with DDoS Mitigation
- Threat Intelligence and Cloud Security Services
- See also our NextDefense portfolio for our range of Cyber Security Health checks and consultancy

Why Telefónica Tech?

1. Our Propel method gets you from idea to working solution fast. This lets you unlock value quickly from your modernisation initiatives.
2. We have deep expertise across the full app stack with proven customised solutions that speed your modernisation.
3. We help you adopt change with less risk and disruption, using modular delivery that keeps compliance and quality high.

We focus on high-value apps and features that deliver clear business impact.

Additional Services to Elevate Your Business

Cloud Strategy

Scale cloud adoption for maximum business impact.

GreenOps

Measure and optimise your cloud carbon footprint, making your cloud operational sustainable.

FinOps

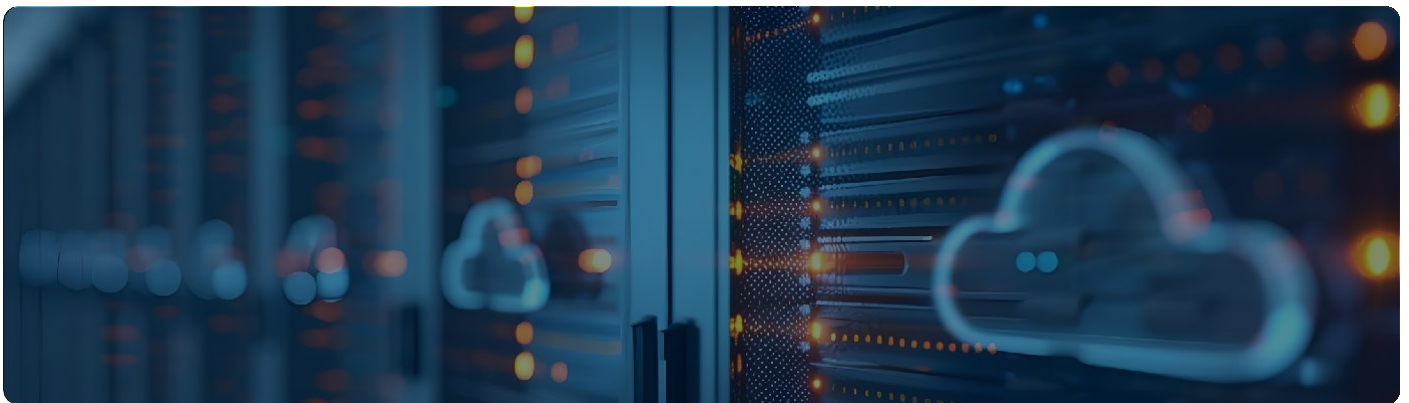

Optimise your cloud spending and boost financial accountability.

Multi-Cloud

Deliver workload freedom by deploying your workloads across multiple cloud providers seamlessly.

Cloud Managed Services

Expert management and support for your cloud environment.

Leading the Way in *Digital Transformation* for our Customers

Telefónica Tech unlocks the power of integrated technology, bringing together a unique combination of the best people, with the best tech and the best platforms, supported by a dynamic partner ecosystem to make a real difference to every business, every day.
