

PALANTIR FOUNDRY INTEGRATION

G-CLOUD 15

SERVICE OVERVIEW

Telefónica Tech's **Palantir Foundry Integration** service supports organisations in integrating **Palantir Foundry** with existing data sources, platforms, and systems. The service enables secure, reliable data flows into and out of Foundry, ensuring data is available, consistent, and governed for operational, analytical, and decision-support use cases.

The service covers integration design, data ingestion, transformation, validation, and ongoing support. Telefónica Tech applies structured integration and assurance practices to ensure integrations are robust, maintainable, and aligned with organisational architecture, security, and governance requirements.

KEY FEATURES

- Design and implementation of **integrations into Palantir Foundry**
- Secure ingestion of data from **multiple internal and external source systems**
- Data transformation and validation to ensure **quality and consistency**
- Support for **batch and near-real-time data integration** patterns
- Alignment with organisational **data governance and access controls**
- Integration testing, monitoring, and issue resolution
- Documentation of data flows, dependencies, and interfaces
- **Secure by design**, with controlled access, encryption, and auditability

KEY BENEFITS

- Enables reliable access to **trusted data within Palantir Foundry**
- Reduces integration risk through **structured and governed data flows**
- Improves data quality and consistency for **analytics and operations**
- Simplifies connection to **disparate systems and data sources**
- Supports scalable and repeatable **data integration patterns**
- Enhances visibility and assurance through **documented and auditable integrations**
- Aligns integrations with **security, compliance, and architectural standards**
