

POWER BI PERFORMANCE OPTIMISATION & BEST PRACTISE

G-CLOUD 15

SERVICE OVERVIEW

Telefónica Tech offers a high-performance tuning assessment for Power BI that focuses on enhancing performance and aligning with Microsoft's best practices. The assessment reviews existing reports and semantic models to offer tailored recommendations, and applies changes to one or more reports to showcase the potential improvements.

KEY FEATURES

- Evaluate and improve existing Power BI setups.
- Measure report speeds against standards.
- Enhance DAX and Power Query to reduce load times
- Streamline models to improve report responsiveness.
- Adjust setups to Microsoft's recommended best practices.
- Redesign complex reports to minimize computational load
- Optimise visuals for faster rendering and better interaction
- Test high usage scenarios to identify performance bottlenecks
- Offer actionable recommendations for enhancing speed and reliability.
- Apply changes to showcase performance improvements

SERVICE BENEFITS

- Faster data retrieval and report rendering
- Improves user experience with quicker, more responsive reports
- Less time and resources wasted on slow performance issues.
- Faster insights enable quicker, more effective decision-making
- Enhanced performance leads to greater user engagement and adoption
- Optimises systems for growth without degrading performance
- More stable reports with reduced downtime and errors.
- Accurate and timely data fosters trust and reduces errors
- Aligns solutions to security best practices
- Efficient data processing uses fewer computing resources
