

Next generation information and process management

Empower staff to work from anywhere; with access to information, governance guaranteed, and security assured. A complete SaaS based solution providing records compliance, enterprise scale information management and process automation.

HIGHLIGHTS

Always up to date - complete SaaS model means you always have access to the latest features.

Scalable - designed for organisations with 100's or 1000's of users.

Secure by design - built to deliver confidentiality, integrity and high availability.

Accurate and trusted - information for efficient decision making.

Significant cost savings - reduce time taken to search for or recreate information.

Process transparency - improve quality, identify bottlenecks and evidence decisions.

Harness the benefits of digital government

Public sector organisations are under constant pressure to boost efficiency and reduce risk while meeting rising community expectations regarding transparency and speed of service. They are obliged to deliver better services to their community and employees, manage and protect their information; meet many legislative requirements, and improve business processes while keeping a tight rein on costs.

However, the vast amount of information created, captured, and consumed across different applications, locations, and devices can hamper the effectiveness of digital government. The key is harnessing all these information assets, no matter where they are stored, with a sound information management solution supported by a robust governance framework. The outcome is well-managed information that will enable efficient and effective use of trusted information in a compliant way to better support, protect and serve the community.

Designed for government and regulated organisations

Objective Nexus is explicitly designed for government and highly regulated industries to improve how they create, collect, manage, and use one of their most valuable assets: information; while supporting the cloud-first approach to IT procurement from governments worldwide.

Conceptually evolved from Objective ECM, but completely re-architected for the cloud, Objective Nexus helps government agencies and highly regulated organisations deliver effective and responsive services to their communities in the following areas:

- **Building trust in government** - by demonstrating transparency and accountability.
- **Modernising public sector IT** - by leveraging the benefits of a complete SaaS model.
- **An efficient and effective public sector** - efficient processes with access to the right information.

Objective NEXUS

Accurate and trusted

Information for efficient decision making.

Significant cost savings

Reduce time taken to search or recreate information.

Scalable

For organisations with 100's or 1000's of users.

Well managed information is key to digital government

Building trust in government

As referenced in the National Archives of Australia's (NAA) policy that took effect 1 January 2021, "Building trust in the public record", well-managed information not only increases community trust in government but also allows agencies to better support, protect and serve the community, both now and into the future.

- **Demonstrate transparency and accountability** – Objective Nexus provides government agencies with evidence of their decisions and actions and importantly, the underlying reasons for those decisions and actions.
- **Assuring compliance and reducing security risks** – governments have an inherent responsibility to manage information securely and must meet a range of regulatory requirements. Objective Nexus assists agencies in its key markets of Australia, New Zealand and the United Kingdom, meeting these obligations and standards.
- **Accuracy, validity and integrity** – Objective Nexus provides the right information, at the right time, to the right people and enables informed decision-making, resulting in better service delivery, improved public perception and ultimately trust.

Modernising public sector IT; leveraging the benefits of a complete SaaS model

Government agencies, like other industry sectors, are adopting cloud computing models at an increasing rate for a variety of well-documented benefits:

- **Always up to date** – a secure SaaS solution, Objective Nexus is always available and always up to date. Faced with staff shortages like all industries, removing the need for dedicating people to keep applications up to date, backed up, and available means agencies can focus their resources on their core purpose, delivering community outcomes, not managing software applications.
- **Ensuring security** – Objective Nexus has a well-defined security posture that addresses each service element of a SaaS solution; the application, the platform, and the delivery of the service.
- **Flexibility** – the headaches that come with structural upheaval in the public sector, such as machinery of government changes or the adoption of new technologies, are removed by simply adding more users or new modules.
- **More effective spend of the taxpayer dollar** – the benefits of cloud mean a faster return on investment as a result of rapid deployment.

An efficient and effective public sector

The ability to share and exchange information between people, processes and systems, and reduce unnecessary data silos, is key to a modern agency, according to the NAA's policy.

- **Enabling flexible and hybrid work practices** – to work effectively, employees need access to information from the location they're working, via the right application for the task at hand. Often this might be SENSITIVE or even PROTECTED levels of information under the government's Information Security Manual (ISM), therefore security, accuracy and provenance are an imperative.
- **Governance across hybrid workplaces** – remote working created an explosion of conversations held, and decisions made in chat or email applications all of which should become government records. With extensive integration into Microsoft 365; Objective Nexus applies governance to records, whether users are working in Microsoft Teams, Outlook or SharePoint.

- **Automation** – removes the administrative overhead of repetitive tasks, reduces errors, and improves the efficiency and reliability of processes. It helps agencies reduce delays, improve quality of community outcomes and meet performance KPIs, whilst providing management visibility with better tracking and reporting. With built-in workflow, Objective Nexus can manage simple records management automation such as content classification or folder generation right through to complex government processes such as responding to ministerial enquiries, correspondence management or Freedom of Information requests.

Objective Nexus

Objective Nexus is a cloud-based solution providing recordkeeping compliance, enterprise-scale information management and process automation.

It delivers all the features government agencies need to comply with the recordkeeping obligations of their jurisdiction and is a platform to create a modern information ecosystem supporting users from wherever they work and integrating with the applications they use every day.

Secure by design

Built to deliver confidentiality, integrity and high availability.

Process transparency

Improve quality, identify bottlenecks, and evidence decisions.

Always up to date

Always have access to the latest features.

A modern, intuitive user interface, results in minimal change management for organisations.

Features

Document Management - a foundation to effectively and securely manage, organise and share information throughout its entire lifecycle of: creation; revision; review; approval; publishing; and disposal.

Records Management - comprehensive and standards-compliant controls for records managers while allowing business users the freedom to work as they choose. Not only does it help meet compliance obligations, it also functions as an intelligent business support system.

Automation – Workflow technology, techniques and processes to improve the efficiency and reliability of classifying, accessing, managing and utilising your valuable information assets; from simple recordkeeping automation to end-to-end management of government processes.

External Collaboration – Extend your internal information governance externally. Maintain control over shared documents. Collaborate across devices, across teams or across the world. Maintain one version of truth with a complete audit trail.

Integration – Line of Business Systems - A modern, low-code integration environment with visual logic and data mapping definitions supports your information governance practices across business applications.

Governance for Microsoft 365 - Invisible information governance across Microsoft 365, allowing users the freedom to work in their application of choice. Whether that's Microsoft Teams, SharePoint or Exchange.

Achievable Benefits

Benefits that can be realised across your entire organisation.

For IT

- **Evergreen environment:** no patching, no upgrades. The service is always available, always up to date.
- **Reduce operational expenses** of deploying, managing and maintaining servers or infrastructure.
- **Flexibility and scalability:** easily add/remove users or functionality as your requirements/business changes. Delivered by scalable platform.
- **Enhanced security:** encompassing the application, the platform and the delivery of the service.

For Users

- **Minimise user disruption** by allowing users to work in the application most appropriate for their business activity, while recordkeeping occurs in the background.
- Effortless experience for new users with **minimal change management**.
- **Enable better discovery** and improve productivity through enhanced search and retrieval.
- **Better decision-making** based on the availability and quality of all relevant information.

For Information and Records Managers

- **Achieve** legal and information **compliance**.
- Remove **record processing overhead** from end user.
- **Retain long term corporate knowledge** throughout its lifecycle.
- **Extend governance** across Microsoft 365 productivity applications.

For the organisation

- **Reduce** security and reputational **risk**.
- Enhanced **reporting and visibility**.
- **Minimise downtime** and ensure that content and process automations are there when the business needs them.
- Drive **efficient and effective** use of information across the organisation.

Digital Government. Stronger Communities.

We create software that makes a difference.

Using Objective software, thousands of financial services and public sector organisations are developing policies with impact, accelerating processes and delivering innovative services.

We help organisations shift to being completely digital. Where our customers can work from anywhere; with access to information, governance guaranteed, and security assured.

Innovation is our lifeblood. We invest significantly in the ongoing development of our products to deliver outstanding solutions to the public sector and regulated industries.

The result, stronger national and community outcomes; and accountability that builds trust in government.
