

Federated information governance

Discover, organize and manage enterprise information from multiple sources.

Built for complex environments with large amounts of information spread across numerous silos, Objective 3Sixty connects your information sources so you can discover, organize, automate your recordkeeping requirements and manage your information. Delivering federated information governance.

HIGHLIGHTS

Connect to all key information repositories for visibility, discovery, management and retention needs.

Automate information management tasks such as classifying content, assigning privileges, and tagging with metadata.

Remove the overhead on users performing information and records management tasks.

Efficiently create tasks and processes for information cleansing, management and transfer.

Aggregated search of accurate information, reducing the time end users need to spend on finding information.

Information explosion

The rapid growth of information is outstripping organizations' ability to manage it. Organizations are dealing with an information explosion from two angles: incoming information from the public and information created from within. This rapid expansion of digital content has led to numerous corporate content repositories, each overflowing with ungoverned, unoptimized data, duplicated documents, and a general feeling of complete content chaos.

Organizations are looking for ways to organize, synthesize and govern their information to make better use of it while remaining compliant with recordkeeping legislation.

Federated Information Governance

There is a solution, and it's called Federated Information Governance, a simple approach to a highly complex challenge. Leave content where it is but provide a single view or lens on information from multiple sources. Information is managed to meet regulatory obligations in the most appropriate location, whether managed in place or directly by a central electronic document and records management system (EDRMS) while ensuring its integrity and accuracy.

Federated information governance enables users to work within their application of choice while compliance necessities are automated across all sources with zero impact on end-users.

Objective 3Sixty

Objective 3Sixty is a platform to connect multiple information repositories, leveraging the latest technology, to bring consistency and control to content anywhere.

The advantage of managing in place means that information does not need to be migrated but can still be managed centrally. Content remains in the source application, where users can continue to work, while governance is achieved automatically in the background. This functionality also offers users the ability to search across all available content sources providing a single, aggregated view of a specific matter or topic.

Capabilities and benefits

Federated information governance provides a practical yet powerful antidote to tame the content sprawl. This is all achieved through an innovative combination of technologies such as federation, REST-APIs, machine learning, and manage-in-place.

Connect & discover

Connect to your disparate systems across the organization to discover information assets to make informed decisions.

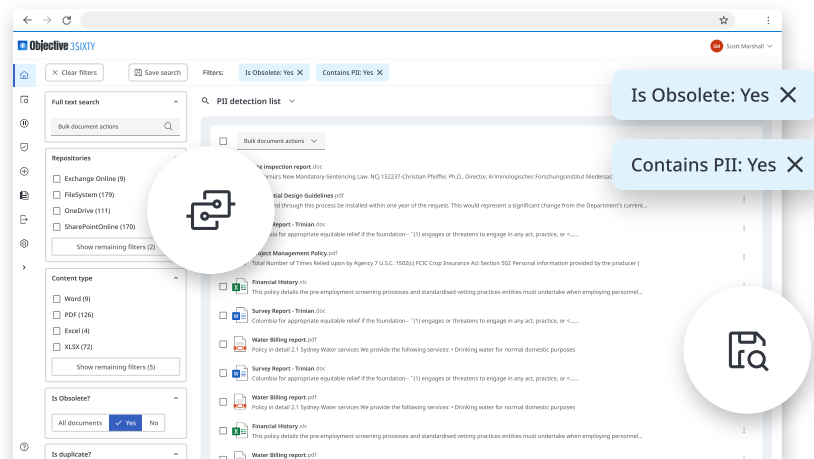

Objective 3Sixty's connector framework connects to multiple information systems seamlessly and effortlessly. The pre-built capability integrates Objective 3Sixty and the leading industry content, business process, and line of business applications. The connectors convert system-specific calls into a common language that can be accessed consistently by the various functional elements in Objective 3Sixty.

Quickly discover and access any schemas located in the remote systems or repositories. These can include tables, columns, categories, content types, index fields and their associated metadata. Create a digital information register to avoid unnecessary duplication of information, systems and processes.

Organize & action

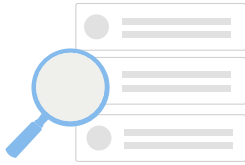

Once connected to your remote systems and repositories, you can leverage the discovery fabric to build a picture of your information, visualize the content distribution and organize content independently of the source. Using advanced visualization and Objective 3Sixty's automation engine, action and improve the quality of the information you have discovered.

Unlock machine learning and the automation engine capabilities to review, cleanse and enrich information, including high-quality auto-classification, de-duplication, image conversion, and PII detection, and update document properties and metadata.

Objective 3Sixty allows you to find and tag personally identifiable information.

Objective 3SIXTY

Auto-Classification

De-duplication of documents

Disposal schedules (approved)

Personally Identifiable Information (PII) detection

Manage records your way

Manage in place allows you to leave your information where it is but provides a single view or lens across multiple sources. Meeting your recordkeeping obligations while information resides in the most appropriate location, ensuring its accuracy and integrity. Manage in-place provides business users with the freedom to work on information in their native system while removing the recordkeeping burden.

Automate the record registration process and application of retention and disposal rules.

Apply classification rules to detect important records and flag all redundant or outdated material found in email, shared drives, SharePoint, and other content repositories.

If a policy requires specific records to be preserved for long-term storage or enhanced security, you can transfer content to your chosen on-premise or cloud-based EDRMS.

The Information Explosion

Just over a decade ago, the world's entire data storage capacity was around 487 exabytes. By 2025, it's estimated that we'll be creating the same volume in under two days. Much of this information is stored in silos such as network drives, cloud storage systems, line of business systems and email. This ungoverned information opens the organization up to greater reputational, legal and security risks.

Much more than records-in-place

Objective 3Sixty is more than just records-in-place. It brings information and users closer together than ever before with invisible governance built-in. Discover the value that federated information governance can bring to your organization:

- Gain an understanding of your information ecosystem to improve quality. Build aggregated views and reveal common topics or themes, pinpoint duplicates, flag sensitive information and control how related information is managed.
- Mitigate risk by ensuring compliance across all information and manage it your way. Manage content in place or transfer content to your corporate EDRMS for long-term retention.
- Identify information of critical importance and value to organizations and ensure that the correct information is retained and protected.
- Automate your recordkeeping obligations and free your knowledge workers to focus on getting their job done with access to relevant and trusted information.
- Reduce the need to build custom apps and code - Objective 3Sixty is an extensible platform that addresses your content challenges now and into the future. Standard APIs allow for interacting with content (files, folders, metadata, versions, retentions etc.) across different systems.

Insight Paper: Taming the Content Sprawl

The rapid growth of information is outstripping our ability to manage it. Organizations are looking for ways to organize, synthesise synthesize and govern their information to make better use of it while remaining compliant with recordkeeping legislation.

This paper discusses a new innovative approach to taming the information or content sprawl. Focusing on what organizations need; a common platform to integrate multiple repositories, discovering, organizing and managing information, bringing consistency and control to content anywhere. We call this federated information governance.

Digital Government. Stronger Communities.

Objective

We create software that makes a difference.

Using Objective software, thousands of public sector organizations are developing policies with impact, accelerating processes and delivering innovative services.

We help organizations shift to being completely digital. Where our customers can work from anywhere; with access to information, governance guaranteed, and security assured.

Innovation is our lifeblood. We invest significantly in the ongoing development of our products to deliver outstanding solutions to the public sector and regulated industries.

The result, stronger national and community outcomes; and accountability that builds trust in government.
